Account and billing

Everything about your Auric Artisan account — signing up and in, the dashboard, security, plans, tokens, payments, invoices, refunds, API keys and deleting your account.

An Auric Artisan account is optional. Every tool on the website is free to use without one. The account exists for the things that have to belong to a person rather than to one browser: a paid plan pass, a token balance for server-backed tool work, API keys, a published portfolio, and the security controls that protect them.

The account lives at <https://auricartisan.com/auth/>. Signing in opens the account dashboard, which has four sections: **Overview**, **Profile**, **Plan & Usage**, and **Security & Privacy**. From there you manage your profile and username, see your plan and usage, buy and review plan passes, view invoices, create API keys, see every device that is signed in, turn on two-step verification, export your data and, if you choose, delete the account.

Billing is deliberately simple. A paid plan is a one-time pass for one month or twelve months, paid through Razorpay. Nothing renews automatically, no card is stored, and there is no subscription to cancel; when a pass ends the account returns to the free Apprentice plan. Plan purchases have a 7-day money-back window.

Who it is for

- Anyone who wants to run server-backed tool work, such as whole-site accessibility crawls in the Analyzer.
- People who want the conveniences of a paid plan: ad-free browsing, watermark-free exports and higher limits.
- Developers who want to call the REST API with their own API keys (Specialist plan and above).
- Anyone publishing a portfolio page at their own address.

Where to find it

Page	Address
Sign in and create an account	https://auricartisan.com/auth/
Account dashboard	https://auricartisan.com/auth/dashboard/
Plans and pricing	https://auricartisan.com/company/pricing/
An invoice	https://auricartisan.com/auth/billing/invoice/ (opened from your invoice list)
Payment confirmation	https://auricartisan.com/checkout/success/ (opened after checkout)
Approve the command-line tool	https://auricartisan.com/auth/device/

When you are signed in, the account chip in the header opens a menu with **Dashboard**, **Profile**, **Billing & plan**, **API keys** and **Sign out**.

Quick start

1. Open <https://auricartisan.com/auth/> and select **Create Account**, or select **Google** or **GitHub** to sign up with one of those accounts.
 2. Complete the form, tick the Terms box, select **Create Account** and complete the **Auric human check**.
 3. Open the verification email and select the link, then select **Confirm email ownership**.
 4. Open the dashboard. In **Finish setting up**, add your name, choose a username and add a profile photo.
 5. Open **Security & Privacy** and select **Enable 2FA** to add two-step verification. Save the backup codes.
 6. If you want a paid plan, open **Plans and pricing**, choose a term and currency, and select **Get Artisan**.
 7. Your receipts appear under **Plan & Usage > Invoices & Payment History**.
-

What you can do

- Sign up with email, Google or GitHub; sign in with your email or your username.
 - Verify your email, reset a forgotten password, and change your password.
 - Protect the account with an authenticator app and single-use backup codes.
 - Approve the Auric command-line tool from a browser.
 - Edit your display name, username, bio, website, location and profile photo, or pick an avatar from the Auric gallery.
 - See your plan, usage meters, tool token balance and invoices.
 - Buy a plan pass, request a refund, and print or save any invoice as PDF.
 - Create, view and revoke API keys; buy prepaid API credits; set paid overage and a monthly spend cap (plans with API access).
 - See every signed-in device, revoke any of them, or sign out everywhere else.
 - Export your account data as JSON, erase this browser's workspace, or delete the account.

Account and billing docs

The task guides, reference, troubleshooting and FAQ for the Auric Artisan account, dashboard and billing.

This folder holds the working guides for the Auric Artisan account: one page per task, a guide to each dashboard section, the plan and payment pages, and the reference, troubleshooting and FAQ pages. Start with [Getting started with the dashboard](#) if you are new.

Getting in

Page	What it covers
Getting started with the dashboard	Opening the dashboard, a tour of the screen, and the first five tasks
Sign up	Creating an account with email and password, or with Google or GitHub
Sign in and sign out	Signing in with email or username, Remember me, the human check, sessions, signing out
Verify your email	The verification link, the 24-hour window, resending, and what stays locked until you verify
Passwords	Forgotten passwords, the reset page, changing your password, accounts without a password
Two-step verification	Turning on authenticator codes, backup codes, signing in with them, turning them off
Device sign-in	Approving the Auric command-line tool with a device code

The dashboard

Page	What it covers
Overview section	The statement, your work, next steps, Start something, and the side column
Profile section	Display name, username, bio, email, website, location, photo, avatar gallery, portfolio card
Plan & Usage section	Current plan, usage meters, changing plan, invoices and the API console
Security & Privacy section	The readout strip, signed-in devices, sign-in history, export, danger zone

Plans, tokens and payments

Page	What it covers
Plans and pricing	Every plan, price, allowance and inclusion, and what is not built yet
Tokens	What tokens pay for, allowances, expiry and claiming

Page	What it covers
Buy a plan	The checkout flow from the pricing page to the confirmation page
Invoices and receipts	Your payment history, the invoice page, printing and saving as PDF
Plan terms, renewal and cancelling	Why nothing renews, what happens when a pass ends, and stopping early
Refunds	The 7-day window, how to ask, how long it takes, and what a refund removes

Developers

Page	What it covers
API keys	Creating, viewing and revoking keys for the REST API
API credits and spend controls	Credit balance, buying credits, paid overage, spend cap, usage figures, live usage

Your data

Page	What it covers
Export your data	Downloading your account data as a JSON file
Delete your account	Unlocking the danger zone, erasing this browser's workspace, deleting the account
Emails and messages	The emails the account sends, and where replies to your messages arrive

Reference and help

Page	What it covers
Reference	Every screen, control, field, rule and status message in the account area
Troubleshooting	Problems with sign-in, verification, payments, keys and the dashboard
FAQ	Short answers to common questions

WEBSITE > ACCOUNT AND BILLING

Getting started with the dashboard

Open the Auric Artisan account dashboard, learn its layout, and complete the first five tasks for a new account.

The account dashboard is one page with four sections. It shows what the account holds — your work, the public page that shows it, what you are paying for, and who is signed in — and it is where you change all of it.

Open the dashboard

1. Sign in at <https://auricartisan.com/auth/> (see [Sign in and sign out](#)).
2. Open <https://auricartisan.com/auth/dashboard/>, or select your account chip in the header and choose **Dashboard**.

If you are not signed in, the dashboard sends you to the sign-in page and brings you back afterwards.

Tip: After you sign in, the site takes you to the dashboard automatically if your account has no username yet, so you can claim one. Otherwise it returns you to the page you came from, or to the home page.

The screen, top to bottom

The masthead

Part	What it shows
Auric Artisan · Account	The page kicker
@yourhandle	Your username. It reads @unclaimed until you choose one, with a Claim your handle link beneath.
Profile photo	Your photo, or your initial, or an empty outline. Double-click it to open the photo viewer.
Plan	Your plan name, for example Apprentice . A status is added when it is not simply active, for example "Artisan · Past due".
Email address	The address you sign in with
Join date	"Joined today", or "Member since" and the month and year
Open Studio	Opens your saved work in the Library
Upgrade	Opens the pricing page. On a paid plan it reads Manage and opens Plan & Usage instead. It is hidden on Industrial Pro, the highest tier.

The section rail

Four tabs switch the sections without leaving the page:

Tab	What it holds	Badge
Overview	A statement of the account, your saved work, suggested next steps and quick links to tools	—
Profile	Your name, username, bio, contact details, photo, and the doorway to your public portfolio	—

Tab	What it holds	Badge
Plan & Usage	Your plan, usage meters, invoices, and (on plans with API access) keys and credits	Number of API keys
Security & Privacy	Password, two-step verification, cookies, signed-in devices, data export and the danger zone	Number of signed-in devices

A badge turns green while its count is zero. With the rail focused, the **Left** and **Right** arrow keys move between tabs, and **Home** and **End** jump to the first and last.

Each section has its own address, so you can bookmark it: **#overview**, **#identity** (Profile), **#plan** and **#security**. Older addresses still work and land in the right place:

Old address	Opens
#profile , #portfolio , https://auricartisan.com/auth/profile/	Profile
#billing , #api-keys , https://auricartisan.com/auth/billing/ , https://auricartisan.com/auth/api-keys/	Plan & Usage
#settings , #sessions , https://auricartisan.com/auth/settings/ , https://auricartisan.com/auth/sessions/	Security & Privacy
https://auricartisan.com/auth/portfolio/	The Portfolio Builder at https://auricartisan.com/portfolio/

The "Finish setting up" panel

If your account is missing something the site needs — usually a username, sometimes a display name — a floating panel titled **Your account is nearly there** appears. It is not a blocking dialog: you can keep using the page, press **Esc**, or select **Later**. It returns after a week if the detail is still missing. It stays out of the way while the **Profile** section is open, because that section holds the same fields.

In the panel:

1. Type a username after the **@** (it is pre-filled with a suggestion when possible). A tick and **Available**, or a cross and the reason, appears as you type.
2. Type **Your name** if it is asked for.
3. If your email is not verified, select **Send it again** to get a new verification link.
4. Select **Save**.

Your first five tasks

1. **Claim your username.** Select **Claim your handle** in the masthead, or open **Profile**, type it in **Username** and select **Save changes**. It becomes the address of your public portfolio and can be used to sign in. See [Profile section](#).
2. **Verify your email.** Until you do, billing, API keys and device approval stay locked. See [Verify your email](#).

3. **Add a name and photo.** The **Finish setting up** card in the Overview side column tracks these; it disappears when all four items are done.
4. **Turn on two-step verification.** Open **Security & Privacy**, select **Enable 2FA**, scan the code, and save your backup codes. See [Two-step verification](#).
5. **Check your plan.** Open **Plan & Usage** to see your plan and usage. New accounts are on the free **Apprentice** plan with 100 starter tokens. See [Plans and pricing](#).

WEBSITE > ACCOUNT AND BILLING

API credits and spend controls

How Auric Artisan API credits are counted, what is included, buying prepaid credits, paid overage, the monthly spend cap, the hard ceiling, and the usage panels in the dashboard.

The REST API is metered in API credits. This page explains the rules and the dashboard panels that show and control them: **Usage & cost**, **Credits & spend**, **Where the credits went** and **Live usage**, all under **Plan & Usage** on plans with API access. The API itself is documented in [Public API](#).

API credits are not tokens. Tokens pay for server work you start in a website tool; API credits pay for calls your own code makes. Neither pays for the other.

How credits are counted

- One credit is one standard request. Heavier endpoints cost more, "so a caller doing simple color maths is not subsidising one rendering images", as the pricing page puts it.
- Credits are counted per account, not per key. Every key you create draws on the same allowance and the same prepaid balance.

Request type (pricing page)	Credits	Examples
Standard	1	Colour conversion, contrast check, vision simulation
Generators	2–4	Palette, harmony, gradient, shade scale, design tokens
Colour dossier	5	All 63 colour spaces plus a locus search, in one call
Rendered PNG	10–12	Palette, gradient and Ishihara images; image analysis
Async job	25	Batch work queued and run on Auric Artisan's clock

The API documentation lists the cost of every endpoint:
<https://auricartisan.com/library/documentation/api/#api-limits>.

What is included

Plan	Included credits a month	Rate limit
Apprentice	None — API not included	—
Artisan	None — API not included	—
Specialist	1,000,000	300 requests a minute
Industrial Pro	10,000,000	3,000 requests a minute

- The allowance refreshes at the start of each billing month and does not roll over.
- Neither allowance is unlimited. The pricing page notes that, sustained around the clock, they work out at roughly 22 and 224 credits a minute, so a busy plan meets the monthly allowance before the per-minute rate limit.
- On Apprentice and Artisan, a key authenticates but is refused on metered endpoints.
- **Industrial Pro before 12 August 2026:** Industrial Pro used to be sold with unlimited API requests. Subscriptions started before that date keep that allowance, which the Subscription and Billing Policy says is metered at 1,000,000,000 credits a billing month.

When the allowance runs out

By default, calls stop: the API answers with a 429 response saying the allowance is used up and when it resets. Nothing is billed.

If you want calls to continue past the allowance, you can turn on paid overage. It is:

- **off by default** — nothing is charged until you turn it on;
- **prepaid** — it spends credits you have already bought, at \$1.00 (₹85) per 100,000 credits;
- **never invoiced afterwards** — if your balance cannot cover a call, the call is refused rather than served on account.

Two safety nets apply:

- **Your monthly spend cap**, if you set one: overage stops when it is reached.
- **The hard ceiling:** independently of any setting, each account is limited in one month to ten times its included allowance, as a backstop against runaway loops or a leaked key. Support can raise it.

Credits & spend panel

Your balance

The large figure is your prepaid credit balance ("prepaid credits"). The line under it says what it is worth, for example "Worth \$5.50 of overage at \$1.00 (₹85) per 100,000 credits. Credits never expire." With no balance it says "No prepaid credits. Overage cannot run without them, so calls stop at the included allowance — nothing is ever invoiced after the fact."

Buy prepaid credits

1. In **Credits & spend**, select **Add credits**. The pack picker opens.
2. Choose a pack. Prices are shown in your currency (the same choice as the pricing page):

Pack	Price (USD)	Price (INR)	Bonus
100,000 credits	\$1	₹85	—
550,000 credits	\$5	₹425	10% more credits
2,400,000 credits	\$20	₹1,700	20% more credits
13,000,000 credits	\$100	₹8,500	30% more credits

3. The Razorpay checkout opens ("Opening checkout..."). Pay as you would for a plan.
4. The panel reports "Payment confirmed — 13,000,000 credits are being added." and then "13,000,000 credits added." (the figure matches your pack). If the balance takes a moment, it says "Payment confirmed. The balance will update shortly — reload if it has not."

If you close the checkout: "Checkout was not completed. Nothing has been charged."

Purchased credits do not expire at the end of a period and are not removed if your plan ends; they become spendable again if the account returns to a plan with API access. The price is set by Auric Artisan when the order is created, never by the page.

Note: Credits belong to plans with API access. On a plan without it, the picker says: "Prepaid API credits are part of the Specialist plan, which is not on sale yet. Nothing to buy here until it is — your existing balance, if you have one, is unaffected." Check your plan can spend credits before you buy them.

Turn on paid overage

1. Under **Spend controls**, select the **Paid overage** switch.
2. A confirmation appears: **This will let calls spend money**. It restates the rate and your current balance.
3. Select **Turn on paid overage** to confirm, or **Keep it off**.

Result: the switch reads "On — past the included allowance, calls spend prepaid credits at \$1.00 per 100,000." and a warning line reminds you paid usage is on.

To turn it off, select the switch again. Turning it off takes effect at once and needs no confirmation: "Off — calls stop at your included allowance. Nothing is charged." On a plan without API access, the switch is disabled: "Not available on this plan — calls stop at the included allowance."

Set a monthly spend cap

1. Under **Monthly spend cap**, type an amount in US dollars, from 0 to 10,000.
2. Select **Save**.

Result: "Saved." The note under the field says how many credits of overage the cap allows this month, for example "Overage stops after 500,000 credits this month.", and names the plan's hard ceiling. A cap of **0** means "no cap of your own — the plan's hard ceiling still applies". The cap limits overage only; it never restricts your included allowance.

If the amount is out of range: "Enter a cap between \$0 and \$10,000."

Recent credit activity

Once there is activity, a list shows the last eight movements, each with a label, date and signed amount: **Plan grant**, **Credits added**, **API usage**, **Refund**, **Adjustment** or **Expired**.

Usage and cost

The **Usage & cost** panel is labelled with the current month. It needs one of your API keys to read the figures from the API (see [Live usage](#)); until then it says "Paste an API key in the live usage panel below to measure this billing period." with a **Connect a key** button.

Figure	Meaning
Credits used, "of N credits included"	This period's use against the allowance, with a bar and a marker for where an even pace would be
Credits used	Credits used this period
Projected by period end	Where the current pace ends the month (highlighted if it passes the allowance)
Included credits left	What remains of the allowance
Days left in period	Days until the allowance refreshes
Overage credits	Credits used past the allowance
Overage cost	What that overage cost, in US dollars

A note under the bar summarises, for example "64% of the allowance used with 9 days to go — ahead of an even pace." or "120,000 credits past the included allowance, costing \$2.00."

Credits per day charts each day of the period. Select **Show as table** for a table of **Day**, **Calls**, **Credits** and **Errors** (also the accessible version of the chart). Before any calls: "No calls recorded in this billing period yet."

Other messages: "That key was refused. It may have been revoked — connect another one below." and "Could not reach the API just now. Your usage is still being recorded." (with **Try again**).

The four figures at the top of the console — **Active Keys**, **Requests Today**, **Rate Limit / min** and **Monthly Usage** (percentage of the allowance) — come from the same data.

Where the credits went

A table of **Endpoint**, **Calls**, **Credits** and **Share of spend** for the current month. Before any calls: "Nothing to break down yet — this fills in once calls are recorded against the account."

Live usage

Live usage shows calls arriving in real time.

1. Paste one of your API keys into **API key** (it starts `aa_live_`).
2. Select **Watch traffic**.

The key is "Kept in this browser tab only — never written to disk, never sent anywhere but the API." The same key also fills in **Usage & cost**.

Once connected (status "Live" and your tier):

- Four figures: **Calls in window**, **Calls / min**, **Error rate** and **p95 latency** (the time within which 95% of calls finished).
- **Busiest endpoints**, as bars.
- **Recent calls**: time, method, path, status, latency and cost in credits. Tick **Errors only** to filter; select **Pause** (and **Resume**) to hold the feed.
- "Connected. Make a request and it will appear here." while waiting.
- **Disconnect** forgets the key.

The feed holds the last 100 calls and resets when the API is redeployed; durable history is available from the API itself. Status messages include "Connecting...", "Reconnecting..." and "Could not connect — check the key." On a plan without API access the panel reads "Live usage becomes available once your plan includes API access." with **See plans**.

WEBSITE > ACCOUNT AND BILLING

API keys

Create, view, copy and revoke Auric Artisan API keys in the dashboard, and understand key limits, plans and what happens after a downgrade.

An API key lets your own code call the Auric Artisan REST API as your account. Keys are created and revoked in the dashboard, under **Plan & Usage** > **Your API Keys**. How to use a key in a request, and every endpoint, is documented in [Public API](#) and on <https://auricartisan.com/library/documentation/api/>.

Before you start

- **Plan.** API access is included from the **Specialist** plan upward. On Apprentice and Artisan the create button is withdrawn, because a key there would authenticate but be refused on every metered call. Specialist is marked **Coming soon** on the pricing page today.
- **Verified email.** API keys are locked until your email address is verified.
- **Limit.** An account can hold up to 10 active keys.
- **One meter per account.** Every key on the account draws on the same monthly credit allowance and the same prepaid balance. Credits are counted per account, not per key.

Create a key

1. Open the dashboard and select **Plan & Usage**.
2. In **Your API Keys**, select **Create your first key** (or **Create key** if you already have some).
3. Type a name that says where the key is used, for example "CI pipeline". Names can be up to 64 characters.
4. Select **Create**. (Select **Cancel** to stop.)
5. A panel appears: "'CI pipeline" created — copy it now.' and "This is the only time the full key is shown. We store just a fingerprint."
6. Select **Copy** (it changes to **Copied!**), or select the text in the field and copy it yourself.
7. Store the key somewhere safe, such as a password manager or your deployment's secret settings.
8. Select **Done**.

Result: the key appears in the list. Keys begin with `aa_live_`.

Important: The full key is never shown again. Auric Artisan keeps only a one-way hash of each key and a short prefix, so it cannot recover a lost key. If you lose one, create a new key and revoke the old one.

The key list

Each row shows:

- the key's **name**;
- its **prefix** — the first characters followed by "...", so you can tell keys apart;
- when it was **created**, and when it was last **used**, or "never used";
- a **Revoke** button.

The number of keys also appears in the **Active Keys** figure and on the **Plan & Usage** tab badge.

Revoke a key

1. Find the key in **Your API Keys**.
2. Select **Revoke**.

Result: the key is removed from the list and stops working. Any code still using it gets an authentication error. Revoking cannot be undone; create a new key if you need one.

Revoke a key straight away if it may have leaked — for example if it was committed to a public repository.

After a downgrade

A key outlives the plan that created it. If your account moves to a plan without API access while it still has keys:

- **Plan & Usage** still shows the API console, so you can see and revoke those keys.
 - A notice reads "The API is not included on" your plan, and explains: "Keys can still be viewed and revoked here, but calls to metered endpoints return 402 PLAN_UPGRADE_REQUIRED. Full API access is included from Specialist upward." It offers **Compare plans** and **Read the API docs**.
 - You cannot create new keys until the account is on a plan with API access again.
-

Keys and the live usage panel

The usage figures in the dashboard come from the API itself, which is reached with an API key. To see them, paste one of your keys into **Live usage > API key** and select **Watch traffic**. The key is kept in that browser tab only and is forgotten when the tab closes. See [API credits and spend controls](#).

Messages

Message	What to do
"Give the key a name."	Type a name before selecting Create .

Message	What to do
"You can hold at most 10 active keys."	Revoke a key you no longer use, then create the new one.
"No API keys yet. Key creation is available from the Specialist plan."	Your plan does not include the API.
"Could not load API keys."	Refresh the page. If it persists, sign in again.
"Could not revoke key."	Try again; check your connection.

WEBSITE > ACCOUNT AND BILLING

Buy a plan

Buy an Auric Artisan plan pass from the pricing page through Razorpay checkout, pay in dollars or rupees, and read the confirmation page.

A paid plan is a one-time purchase of a pass for one month or twelve months, paid through Razorpay's checkout on <https://auricartisan.com>. This page walks through the purchase and every screen you can see afterwards. Today the plan on sale is **Artisan**; Specialist and Industrial Pro are marked **Coming soon**.

Before you start

- **Sign in.** An account is required before any payment, so the pass belongs to you rather than to one browser.
- **Verify your email.** Billing is locked until your email address is verified. See [Verify your email](#).
- **Know what you are buying.** Read [Plans and pricing](#). Every tool is already free; a plan adds conveniences.

Buy a plan pass

1. Open <https://auricartisan.com/company/pricing/>.
2. Choose **Monthly** or **Annual** with the switch above the plan cards. Annual costs ten times the monthly price for twelve months.
3. Choose **USD \$** or **INR ₹**. You are charged in the currency shown.
4. On the Artisan card, select **Get Artisan**.

5. If you are not signed in, a note appears under the button instead of a checkout: "Sign in first — a plan is attached to your account, not to this browser." Select **Sign in or create a free account**. You come straight back to the pricing page afterwards, and "Nothing is charged until you confirm."
6. The button changes to **Redirecting...** and the Razorpay checkout opens over the page, showing Auric Artisan and a description such as "Artisan plan — monthly (one-time)".
7. Pay with any method Razorpay offers you: cards, UPI, netbanking or wallets.
8. After you pay, the page shows "Verifying payment...", then the button reads **Paid — plan activated!** (with a tick mark).
9. The confirmation page opens.

Result: the **Payment confirmed** page shows your plan as "Now active on your account", with the date it is active until. The plan is on your account at once, and the header, dashboard and pricing page show it as your current plan.

The amount you pay

- The price is set by Auric Artisan's own catalogue when the order is created, not by the page, so the amount cannot be changed by anything in your browser.
- The Subscription and Billing Policy states that "The price you see is the total you pay". No GST or other tax is added at checkout, because Auric Artisan is not currently registered for GST.
- Your bank may add its own foreign-transaction fee if you pay in a currency that is foreign to your card.

Paying from outside India

The pricing page is candid about this: accepting non-Indian cards is a permission on Auric Artisan's Razorpay account, and American Express is a separate opt-in that may not go through. If your card is declined at the last step, nothing is charged. The pricing page asks you to tell Auric Artisan through the contact page, because it is usually "a permission on our side rather than a problem with your card", and they would rather arrange the payment with you.

The confirmation page

The confirmation page is <https://auricartisan.com/checkout/success/>, opened with your order reference. It shows one of five states.

Payment confirmed

- **Payment confirmed** — your plan name and "Now active on your account".
- "Active until" a date, or "Access is active on your account", with "A one-time purchase, not a subscription — nothing renews and nothing is charged again."
- A list of what the plan includes.
- **Open your dashboard** and **Start using the tools**.

- A **Receipt** block: **Paid on**, **Method**, **Payment** reference, **Order** reference and **Total paid**. The copy buttons beside the two references copy them.
- **View invoice** → and **Billing history** →.
- "Your plan activates within a few seconds of payment. If anything looks wrong, quote the order reference above."

Confirming your payment

Shown while Razorpay confirms the payment, usually a few seconds. Three steps tick off: **Payment authorised by your bank**, **Verifying the signature**, **Activating your plan**. "Nothing is charged twice if you refresh." If it takes longer than usual, the page says the order will be updated shortly and offers **Open billing history** and **Contact support**.

Payment not completed

"This order was not paid, so nothing has been charged. Any hold your bank placed is released automatically." The usual reason: "The payment was declined or abandoned before it completed. A different card or UPI usually goes through." Select **Try this payment again** to return to the pricing page. If money left your account anyway, contact support with the order reference.

This order was refunded

"The payment for this order has been refunded in full. It can take a few working days to appear on your statement." Anything the order activated has been removed.

No order to show

You opened the page without an order reference. Your receipt is in your billing history; the page links to **Billing history**, **Your dashboard** and **Plans and pricing**.

If something goes wrong during checkout

What you see	What it means
"Checkout cancelled."	You closed the checkout. Nothing was charged.
"Payment failed:" followed by a reason	The payment did not go through. Try another method.
"Checkout is briefly unavailable, so nothing was charged."	The checkout could not start. Try again in a moment, or contact Auric Artisan to set it up.
"Could not read the plan price. Please refresh and try again."	The page did not finish loading. Refresh it.
"Payment could not be verified."	Check your billing history before paying again, and contact support with the order reference if needed.

More in [Troubleshooting](#).

Stay safe

Pay only through the Razorpay checkout presented on auricartisan.com. The Terms of Service ask you never to pay anyone claiming to represent Auric Artisan through any other channel, and to report such requests. Auric Artisan never sees or stores your card, UPI or bank details.

Buying API credits

Prepaid API credits are bought from the dashboard, not the pricing page, and only on plans that include the API. See [API credits and spend controls](#).

WEBSITE > ACCOUNT AND BILLING

Overview section

Every part of the Overview section of the Auric Artisan dashboard — the statement, your saved work, next steps, quick links and the side column.

The **Overview** is the first section of the dashboard (<https://auricartisan.com/auth/dashboard/#overview>). It answers "is my account in order?" first, then shows your work, then suggests what to do next. Everything it shows is read from your account and from this browser; a part with nothing true to say is left out rather than filled with zeros.

On a wide screen the Overview has a main column and a side column. On a screen narrower than about 1,024 pixels, the side column moves to the top because it holds the things you most need to act on.

The statement

The statement opens the main column.

- **Statement** — the heading is the current month and year.
- A one-line summary appears when there is something to say, for example "One key is doing the work." or "3 keys are in use."

Below it is a ledger. A row appears only when it has a real value:

Row	Shows
Plan	Your plan name
Credits used	API credits used this billing period, with the period as a note (plans with API access, once usage has loaded)
Credits left	Included API credits left, with "N days left in the period"
Your work	The number of items you have saved, with a note such as "12 palettes · 3 collections · 40 KB"; or Nothing yet
Two-factor authentication	On , or Not set up with a Set it up button that opens Security & Privacy

If rows are left out, a line says so, for example "3 more rows appear here once there is something to put in them — credits, storage, a published page."

Whether your portfolio is published is shown in the **Profile** section, on the **Public portfolio** card.

When API usage has loaded, a small table, **Where the credits went**, lists the endpoints that used the most credits.

At the foot, **Plan & usage in full** opens the Plan & Usage section.

Your work

- The heading counts what you have saved, for example "12 things you made.", or reads "Nothing here yet."
- The line under it reads "Palettes, scales and gradients from your Universal Library, newest first." or, when empty, "Anything you save from a tool lands here. Open a tool and make something."
- **Open the library** (or **Open the tools** when empty) takes you there.
- Up to twelve tiles show your newest saved items. Each tile shows the colours as swatches, the name, up to two hex values and how long ago it changed. Select a tile to open the library.

The count comes from the library saved in this browser. Work saved in another browser is not included.

Next

Up to three suggestion cards, each with a button and a × to dismiss it. Suggestions only appear when they apply:

Card	Shown when	Button
Turn on two-factor	Two-step verification is off (highlighted as the most urgent)	Set it up
Group your work	You have more than two saved items and no collections	Open the library
Make an API key	You have no API keys	Create a key

Dismissing a card hides it in this browser. Clearing the browser's site data brings dismissed cards back.

Note: API keys work only on plans that include API access (Specialist and above). On other plans, **Make an API key** leads to a section that explains the API is not part of your plan.

Start something

A row of quick links: **Colour tools**, **Palettes**, **Gradients**, **Shades**, **Contrast**, **Analyse a page** and **All tools**.

The side column

Finish setting up

A checklist of four items, with a progress ring and a count such as "2 of 4 done":

1. **Add your name**
2. **Choose a username**
3. **Verify your email**
4. **Add a profile photo**

Each unfinished item has a button (**Add**, **Pick** or **Verify**) that opens the Profile section. The card disappears once all four are done.

Tool tokens

Your token balance for server-backed tool work.

- The large figure is your balance.
- Beside it: "of 250 a month" (for example) on a plan with a monthly allowance, or "tokens" on the free plan's one-time grant.
- The bar shows how much of this period's included allowance is left. It is hidden for a one-time grant, which never expires.
- The note explains the balance, for example "250 of these lapse at the end of the period.", "100 do not expire.", or "This period's allowance is waiting to be claimed."

The card is hidden if you have no balance and no allowance. See [Tokens](#).

This device

Shows the browser and operating system you are using now, for example "Chrome on Windows", with **Active now**.

WEBSITE > ACCOUNT AND BILLING

Delete your account

Unlock the Auric Artisan danger zone, erase this browser's workspace, or permanently delete your account, and what deletion does and does not remove.

The **Danger zone**, at the bottom of **Security & Privacy**, holds the two actions that cannot be undone:

- **Erase this browser's workspace** — clears the library, collections, drafts and preferences stored in this browser. Anything saved to the account stays.
- **Delete this account** — permanently deletes your profile, portfolio, keys, sessions and billing history. There is no undo and no recovery.

The zone is locked until you prove it is you, and each action asks for its own confirmation word on top of that.

Before you delete

- **Export anything you want to keep.** See [Export your data](#). Download invoices you need from **Plan & Usage**.
- **Revoke or note your API keys.** They stop working when the account is deleted.
- **Consider a refund first** if you bought a plan in the last 7 days. See [Refunds](#).
- **Accounts created with Google or GitHub** need a password to unlock the danger zone. If you never set one, the zone says "Set an account password before using these actions." Set one with **Forgot password?** first — see [Passwords](#).

Unlock the danger zone

1. Open the dashboard and select **Security & Privacy**. Scroll to **Danger zone**. Its state reads **Locked**.
2. The list **Behind this door** names the two actions it contains.
3. Under **First, type this sentence**, type the sentence shown exactly: "I understand these actions cannot be undone". A hint says "That matches." when it does, or "Not yet — it has to match word for word."
4. Under **Then your account password**, type your password.
5. Select **Unlock for 5 minutes**.

Result: the state reads **Unlocked** and a timer shows "Unlocked — relocks in 5:00". The actions appear. When the timer reaches zero the zone locks itself again; select **Lock now** to lock it sooner. Reloading the page does not lock it early.

Tip: If you read the site in Hindi, type the sentence as it is displayed, in Hindi.

Erase this browser's workspace

1. Unlock the danger zone.
2. Next to **Erase this browser's workspace**, select **Erase**.
3. Type **ERASE** in **Type ERASE to confirm**.
4. Select **Erase** again (it becomes available once the word matches). Select **Cancel** to stop.

Result: "Cleared N stored items from this browser. Reload to see it." — or "There was nothing stored in this browser." Only this browser's library, portfolio draft, dashboard preferences and collection preferences are cleared. Your cookie choice and theme are kept, and your account, plan, keys and anything published are untouched.

Delete this account

1. Unlock the danger zone.
2. Next to **Delete this account**, select **Delete account....**
3. Read the warning: "This immediately and permanently erases your profile, portfolio, API keys, sessions, and billing history. There is no undo and no recovery."
4. Type **DELETE** in **Type DELETE to confirm**.
5. Type your password in **Confirm your password**.
6. Select **Permanently delete account** (available once both are filled in). Select **Cancel** to stop.

Result: "Permanently deleting your account...", then "Account deleted. Redirecting...", and the home page opens. You are signed out on every device.

If it fails: "Could not delete your account — check your password and try again."

What deletion does

- The account is closed immediately. You are signed out everywhere and cannot sign in to it again.
- Your personal details are removed from the account: the name, email address, password and two-step secret no longer belong to it.
- API keys stop working, because they only work for an active account.
- The dashboard describes the result as erasing "your profile, portfolio, API keys, sessions, and billing history". The next section explains how payment records are handled.

What is kept, and why

The Security page (<https://auricartisan.com/security/>) explains that "Account erasure anonymises personal data in place rather than destroying financial records. Tax law requires invoices to be retained, and an invoice naming nobody is not a valid record — so the transaction remains and your identity does not."

The Data Retention and Deletion Policy adds that backup copies and security logs may persist until their normal rotation completes, and that records required by law, disputes or security may be kept longer. The FAQ says personal data is scheduled for deletion within about 90 days unless the law requires it to be kept.

What deletion does not touch

- **Your browser.** Work saved in this browser (the library, drafts, preferences) is not on the account and is not removed by deleting it. Use **Erase this browser's workspace** first, or clear your browser's site data.
 - **Copies you made.** Exports, downloaded files and anything you published elsewhere.
 - **The browser and VS Code extensions.** They keep their own local data; uninstall them to remove it.
-

Ask for deletion instead

If you cannot sign in, you can ask for deletion through the contact page with the topic **Privacy or data**, from the email address on the account. See [Contact and support](#).

Messages

Message	Meaning
"That password is not right."	The password was wrong; the password field is cleared.
"The sentence does not match. It has to be word for word."	Retype the sentence.
"Too many attempts. Try again in a few minutes."	Wait and try again.
"Set an account password before using these actions."	A provider account with no password.
"Confirm your email address first."	Verify your email address.
"This page could not prove it is still your session. Reload the page and try again — your password is fine."	Reload the page.
"The danger zone is not available on this server yet. Nothing is wrong with what you typed."	The zone shows Unavailable ; contact support to delete the account.

WEBSITE > ACCOUNT AND BILLING

Device sign-in

Approve the Auric command-line tool from your browser with a device code, so it can act as your account.

The Auric command-line tool (`auric`, listed as `@auric-artisan/cli` on the API documentation page) signs in without asking for your password in the terminal. Instead it shows a short code, and you approve that code in a browser where you are already signed in. This is called a device sign-in.

The approval page is <https://auricartisan.com/auth/device/>. Its heading is **Authorize Auric CLI**.

Before you start

- You need an Auric Artisan account, signed in in your browser.
- Your email address must be verified. Device approval is one of the features locked until you verify (see [Verify your email](#)).
- Install the command-line tool as described on the API documentation page: [Public API](#).

Approve a device

1. In your terminal, run:

```
auric login
```

2. The tool prints a short code and an approval address.
3. Open the address in your browser. If you are not signed in, the page sends you to sign in and brings you back.
4. The page shows **Signed in as** and your email or name, so you can check it is the right account.
5. If the address included the code, it is already in **Device code**. Otherwise type it; it has the form `ABCD-EFGH` (letters and numbers; the dash is added for you).
6. Select **Authorize CLI**.

Result: "CLI authorized. You can return to your terminal." The form disappears and the command-line tool continues, signed in as you. Its requests then use your account's plan and quota.

Other commands the tool documents for this:

```
auric whoami
auric logout
```

Messages

Message	What to do
"Enter the device code shown in your terminal."	The Device code field is empty.
An error about an invalid or expired code	Run <code>auric login</code> again to get a new code, and approve it promptly.
A message about email verification	Verify your email first, then try again.

Only approve codes you started

Approving a code lets whoever is running that terminal act as your account. Only approve a code you just generated yourself, on a computer you trust. If you approve one by mistake, sign out of the tool with `auric logout` on that computer and review **Security & Privacy** in the dashboard.

WEBSITE > ACCOUNT AND BILLING

Emails and messages

The emails your Auric Artisan account sends, where replies to your messages arrive, and why there is no in-account inbox.

Your Auric Artisan account has no message inbox of its own. Everything the site needs to tell you arrives by email, at the address on your account, and replies to anything you send through the contact form arrive by email too.

Emails the account sends

Email	When it arrives	What to do with it
Verification link	After you sign up with email and password, or when you ask for a fresh link	Open it within 24 hours and select Confirm email ownership . See Verify your email .
Welcome	Once your account is usable — straight away for Google or GitHub sign-ups, after verification for email sign-ups	Nothing; it lists places to start: the tools, the Learn library and your dashboard. Replying reaches a person.
Password reset link	When you use Forgot password?	Open it within one hour. See Passwords .

Email	When it arrives	What to do with it
Receipt	After a purchase	Keep it; it carries your order reference, which starts with <code>order_</code> .
Contact form confirmation	When you send a message through the contact page	Nothing; it confirms the message arrived.
Reply to your message	When Auric Artisan answers	Reply in the same thread.

Email is delivered through Resend, named on the Security page as a third-party provider.

Where replies come from

The contact page routes each topic to one of three addresses, and replies come from the same one:

Address	Topics
hello@auricartisan.com	Using a tool, Billing, Something else
developer@auricartisan.com	A bug, API or integration
security@auricartisan.com	Security, Privacy or data

Invoices name support@auricartisan.com for questions about an invoice.

See [Contact and support](#) for reply times and how to write a useful message.

Beware of look-alikes

Auric Artisan asks you to pay only through the Razorpay checkout on auricartisan.com. If an email asks you to pay somewhere else, or asks for your password or backup codes, do not act on it; report it through the contact page.

Change the email address on the account

The email address cannot be changed from the dashboard yet. Its field in **Profile** is read-only and says "Email changes are not supported yet — contact support." Write through the contact page from your current address.

WEBSITE > ACCOUNT AND BILLING

Export your data

Download your Auric Artisan account details, preferences, portfolio draft and saved library as one JSON file from the dashboard.

The dashboard can put your account details and the work saved in this browser into one JSON file (a plain-text data format that most tools can read). Nothing secret is included.

Download the export

1. Open the dashboard and select **Security & Privacy**.
2. Find the row **Export everything**.
3. Select **Export**.

Result: "Export downloaded." and a file named like `auric-artisan-export-2026-09-25.json` (the date of the export) is saved by your browser.

What the file contains

Section	Contents
<code>exported_at</code>	When you made the export
<code>profile</code>	Your account details as the site holds them: display name, username, email address, bio, website, location, photo and related account fields
<code>preferences</code>	Your dashboard preferences
<code>portfolio</code>	Your Portfolio Builder draft as saved in this browser
<code>portfolio_stats</code>	The view, download and share counters kept in this browser
<code>library</code>	Everything in My Library in this browser — palettes, gradients, collections and other saved items

What it does not contain

- **Secrets.** Passwords, two-step verification material and API keys are never included.
- **Work saved in other browsers.** The library and portfolio sections come from the browser you are using. Export from each browser you use.
- **Receipts.** The on-screen description mentions receipts, but your invoices are not written into this file. View, print or save them as PDF from **Plan & Usage > Invoices & Payment History** — see [Invoices and receipts](#).

A complete copy of what Auric Artisan holds

The Privacy Policy lists a right to portability — "a portable copy of applicable data where technically feasible" — and a right of access. For a copy of data held on Auric Artisan's servers beyond this export (for example order and payment records, or contact messages), write through the contact page with the topic **Privacy or data** (reply time: within 30 days). See [Contact and support](#).

Keep the file safe

The export holds your email address and profile details. Store it somewhere private.

WEBSITE > ACCOUNT AND BILLING

Invoices and receipts

Find your Auric Artisan payment history, open an invoice, print it or save it as PDF, and understand what the receipt is for tax purposes.

Every payment, refund and chargeback on your account is listed in the dashboard, and each one has its own printable invoice page.

Find your payment history

1. Open the dashboard and select **Plan & Usage** (or choose **Billing & plan** in the header account menu).
2. Scroll to **Invoices & Payment History**.

The table lists **Date**, **Description** (Payment, Refund or Chargeback, with the plan and term), **Amount**, **Status** (Paid, Failed or Refunded) and a **View** link. It shows 25 rows at a time; use **< - Newer** and **Older - >** to page through more.

With no purchases yet it reads "No payments yet. Receipts appear here after your first purchase."

Open an invoice

1. Select **View** on a row.
2. The invoice page opens at <https://auricartisan.com/auth/billing/invoice/> with that invoice's reference in the address.

The invoice shows:

Part	Contents
Header	Auric Artisan — "Color science platform & creative tools", the website and the support email address
Invoice #, Date, Status	The invoice reference, the date and Paid, Failed or Refunded
From	Auric Artisan, "Internet · Worldwide", support@auricartisan.com
Billed to	Your name and email address
Line items	What was bought (the plan and its term) and the amount, then the Total
Payment note	"Payment processed via" the provider (Razorpay), and the payment reference
Footer	"Auric Artisan is operated under Indian law. Questions? Email support@auricartisan.com and quote the invoice number above."

Print or save as PDF

1. Open the invoice.
2. Select **Print / Save as PDF**.
3. In your browser's print dialog, choose a printer, or choose **Save as PDF** (the wording depends on your browser).

Share or keep the link

Select **Copy invoice URL** to copy the invoice's address; the button briefly reads **Copied**. Only you can open it: the page needs you to be signed in to the account that made the payment.

Select ← **Back to billing** to return to the dashboard.

Receipts and GST

The Subscription and Billing Policy explains that Auric Artisan is not currently registered for GST. That means:

- no GST or other tax is added at checkout — the price you see is the total you pay;
- the receipts issued are payment receipts, not GST tax invoices: they carry no GSTIN and no tax component;
- they cannot be used to claim input tax credit.

If you need a GST invoice for a business purchase, the policy asks you to wait until registration is in place rather than buying on the assumption that one will follow.

Note: The invoice page has a section for GST details ("This is a tax invoice. GST is inclusive in the total.") that appears only when an invoice actually carries tax. Under the current policy you should not expect to see it.

Your receipt email and order reference

The contact page's **Billing** topic says your order or invoice ID "is in your receipt email. It starts with order_." Quote it whenever you contact Auric Artisan about a payment. The confirmation page after checkout shows the same **Order** reference with a copy button.

Messages on the invoice page

Message	What to do
Invoice not found — "We couldn't load this invoice. It may have been removed, or you may need to sign in."	Sign in to the account that paid, then open the invoice from your payment history.
"Missing invoice id."	Open the invoice from the View link rather than a shortened address.
"That invoice could not be found on your account."	The invoice belongs to another account, or the reference is wrong.
"We could not load this invoice. Try again later."	A temporary problem. Try again.
"Network error loading the invoice."	Check your connection.

WEBSITE > ACCOUNT AND BILLING

Passwords

Reset a forgotten Auric Artisan password, change your password from the dashboard, and add a password to a Google or GitHub account.

This page covers three tasks: resetting a password you have forgotten, changing a password you know, and adding a password to an account that was created with Google or GitHub.

Password rules

Every Auric Artisan password must have:

- 12 to 128 characters,
- both upper-case and lower-case letters,
- at least one number,
- at least one symbol,
- no single character repeated four or more times in a row,
- not be a common password such as "password123".

Passwords are stored only as a one-way hash (the Security page names PBKDF2-SHA256 at 600,000 iterations), so nobody at Auric Artisan can read or recover your password. A reset replaces it rather than revealing it.

Reset a forgotten password

1. Open <https://auricartisan.com/auth/> and select **Forgot password?** under the password field.
2. The **Recover access.** panel opens. If you had typed an email address in the sign-in form, it is copied into **Email**.
3. Type the email address on the account (not your username) and select **Send Reset Link**.
4. The page always answers "If that address belongs to an account, a one-hour reset link is on its way." It says the same whether or not the address has an account, so nobody can use the form to find out who is registered.
5. Open the email and select the reset link within one hour.
6. The page **Set a new password** opens. Type a new password in **New Password** and again in **Confirm Password**. Select the eye button to show what you typed.
7. Select **Reset password**.

Result: "Password updated. Redirecting to sign in..." and, a moment later, the sign-in page. Sign in with the new password. Resetting a password ends every existing sign-in on every device.

Select ← **Back to Sign In** on either panel to return without resetting.

Reset page messages

Message	Meaning
"This reset link is missing a token."	The address is incomplete. Open the full link from the email.
"Password must be at least 12 characters."	Checked before sending. The full rule list above also applies.
"Passwords do not match."	The two fields differ.
An expired or used link message	Each link works once and for one hour. Request a new one.

Change your password

1. Open the dashboard and select **Security & Privacy**.
2. The **Password** cell in the readout strip says when the password was last set, for example "Set when you signed up", "Unchanged since you signed up", "Changed today", "Changed yesterday" or "Changed 42 days ago".
3. Select **Change** in that cell. A small form opens below the strip.
4. Type your **Current password**, a **New password (12+ chars, mixed)**, and **Repeat new password**.
5. Select **Update password**. Select **Cancel** to close the form without changing anything.

Result: "Password changed." Changing the password signs you out everywhere, including this browser, so the dashboard returns you to the sign-in page. Sign in with the new password.

Message	What to do
"New passwords do not match."	Retype the new password in both fields.
"Current password is incorrect."	Check the current password, or reset it instead.
"Password changed in another session. Sign in again."	The password was changed somewhere else a moment ago. Sign in with the newest password.

Add a password to a Google or GitHub account

An account created with Google or GitHub has no Auric Artisan password. You need one to unlock the dashboard's danger zone (for example, to delete the account); without one the danger zone says "Set an account password before using these actions."

1. Sign out, or use a private window.
2. Follow [Reset a forgotten password](#) with the email address of your Google or GitHub account.
3. Set a password from the emailed link.

Result: you can sign in with either the provider or the email address and password.

[WEBSITE](#) > [ACCOUNT AND BILLING](#)

Plan & Usage section

Your Auric Artisan plan, usage meters, the Change plan cards, invoices and payment history, and the API console for plans with API access.

The **Plan & Usage** section (<https://auricartisan.com/auth/dashboard/#plan>) shows what you pay for and what you use: your plan, your usage meters, your invoices, and — on plans that include the REST API — your API keys, credits and spend controls. The header menu items **Billing & plan** and **API keys** both open this section, as do the older addresses `#billing` and `#api-keys`.

What you see depends on your plan:

- On **Apprentice** and **Artisan**, the section shows your plan and receipts, and one card explaining that the API is not part of your plan.
- On **Specialist** and **Industrial Pro**, it also shows the full API console.
- If your account holds API keys from an earlier plan, the API console stays visible whatever you pay now, so you can still see and revoke those keys.

Current Plan

The **Current Plan** panel names your plan and its state in one line:

Line	When
"You're on the free Apprentice plan."	Free plan
"Artisan — active until 12 Oct 2026. Does not renew automatically." (plan and date vary)	A paid pass, which ends on that date
"Your Artisan subscription has ended."	A plan that has ended
"Payment for your Artisan plan failed — please update your payment method."	A failed payment
"Artisan — no active subscription on this account."	The plan is named but has no active purchase behind it

Buttons:

Button	What it does
Change Plan	Opens the pricing page
Request a refund	Shown on a paid pass. Its tooltip explains: "This pass does not renew, so there is nothing to cancel — you will not be charged again. Use this to ask for a refund instead." It opens the contact page. See Refunds .

Note: A **Cancel Subscription** button exists for a genuine recurring subscription, which would say when it renews. Auric Artisan does not sell recurring subscriptions today, so you will normally see **Request a refund** instead. See [Plan terms, renewal and cancelling](#).

Usage meters

Under the plan line is a list of meters. Each shows how much you have used against your plan's figure ( means unlimited), with a bar that changes colour when you pass two-thirds of the figure and again when you reach it.

Meter	Counts	Apprentice figure
Vision sims today	Vision simulations run today	25
URL analyses this month	Page analyses in the Analyzer this month	20
SVG recolors this month	SVG downloads from SVG Recolor this month	15
Experiment runs	Psychophysics Engine runs	25
Projects	Saved items in your library	20
Team seats	Seats on the account (every account is single-user today)	1

Paid plans show their own, higher or unlimited, figures. A meter with nothing to count on your plan is hidden. If nothing has been used yet, the list says "No usage to report yet — your meters will appear as you use the tools."

Things to know about the meters:

- Daily meters reset each day and monthly meters each calendar month, both in UTC.
- Counts include use recorded in this browser, so a meter can differ between browsers until the account's own figure catches up.
- **Projects** is counted from the library saved in this browser.
- Every tool stays usable. The pricing page describes vision simulations as unmetered, because they run in your browser.

Change plan

Change plan is a folded panel. Its line reads "You are on Apprentice. Compare what each tier includes." (or "...the highest tier..." on Industrial Pro). Open it to see one card per plan:

Card part	Shows
Name and price	The plan and its monthly price, or Free / forever
Description	What the tier adds
Button	Current plan , Get this plan , Switch plan , Switch to Free , or Coming soon

- Cards marked **Coming soon** cannot be selected; those tiers are not on sale.
- Selecting a paid plan opens the pricing page, where you buy it. See [Buy a plan](#).
- **Switch to Free** returns you to the dashboard. A paid pass cannot be cut short from here; it ends on its own date, or you can ask for a refund.

- Prices on these cards are shown in Indian rupees. The pricing page lets you choose US dollars or rupees.
- **See the full comparison** opens the pricing page's comparison table.

Invoices & Payment History

A table of every payment on the account, newest first. The heading shows the total, for example "(3 total)".

Column	Shows
Date	The payment date
Description	Payment , Refund or Chargeback , with the plan and term underneath
Amount	The amount and currency
Status	Paid , Failed or Refunded
(actions)	View opens the invoice page

The list shows 25 payments at a time. When there are more, **< - Newer** and **Older - >** move between pages, with a label such as "1–25 of 40".

If you have not bought anything: "No payments yet. Receipts appear here after your first purchase." See [Invoices and receipts](#).

The API console (Specialist and above)

On plans with API access the rest of the section is the API console. With no keys yet, only the parts that can have a value are shown: your credit balance, the place to create a key, the documentation and the rate table. Once a key exists, the usage panels appear as well.

Panel	What it is	Guide
Four figures	Active Keys , Requests Today , Rate Limit / min and Monthly Usage	API credits and spend controls
Usage & cost	Credits used this billing period against the included credits, projection, overage and a daily chart	API credits and spend controls
Your API Keys	Create, list and revoke keys	API keys
Credits & spend	Prepaid credit balance, Add credits , paid overage, monthly spend cap, recent credit activity	API credits and spend controls
Where the credits went	Calls and credits per endpoint this period	API credits and spend controls
Live usage	A live feed of calls as they arrive	API credits and spend controls

Panel	What it is	Guide
Rate Limits by Plan	Requests per minute, included credits and maximum keys for each plan; your row is highlighted	Below
API Documentation	View API Docs and Endpoint Index	Public API

Rate Limits by Plan

Plan	Requests / min	Included credits / month	Max Keys
Apprentice (Free)	—	Not included	—
Artisan	—	Not included	—
Specialist	300	1,000,000	10
Industrial Pro	3,000	10,000,000	10

The note under the table reads: "One credit is one standard request. A 63-space dossier costs 5, a rendered PNG 10, an async job 25. Past the included allowance, opt-in prepaid overage is \$1.00 (₹85) per 100,000 credits."

On plans without the API

Apprentice and Artisan see one card instead: **Credits, keys and the live feed — Not part of Apprentice** (or your plan's name). "They start at Specialist, which includes 1,000,000 API credits a billing month." with a **Compare plans** button.

Plan terms, renewal and cancelling

Why Auric Artisan plan passes never renew, what happens when a pass ends, how to stop early, and what happens to tokens and credits.

Every paid plan sold on Auric Artisan is a one-time purchase of a fixed period — one month or twelve. This page explains what that means in practice.

Nothing renews

- No recurring subscription is created when you buy a plan.

- No payment mandate, standing instruction or saved card is kept for a future charge.
- No second charge is ever scheduled.

So there is no renewal to be surprised by, and nothing to cancel. The dashboard's plan line says so: for example "Artisan — active until 12 Oct 2026. Does not renew automatically."

Note: Some policy pages use the word "subscription". The Terms of Service explain that, on Auric Artisan, it means the plan record and its billing period — not a recurring charge.

When a pass ends

The pass ends on its own at the end of the term you bought. You do not need to do anything.

- The account returns to the free **Apprentice** plan.
- Every tool keeps working.
- Your saved work is not touched. It lives in your browser, so it stays exactly where it is whatever your plan does.
- The paid conveniences stop: ad-free browsing, watermark-free exports, the monthly token allowance and any higher limits.
- The plan's included API credit allowance ends with it. Purchased API credits stay on the account (see below).

Buying another term

To continue, buy another pass from the pricing page when the current one ends, the same way you bought the first. See [Buy a plan](#). An upgrade starts as soon as the payment clears.

Stopping early

Because there is no future charge, stopping early means asking for a refund rather than cancelling:

- Within 7 days of purchase, a refund is unconditional.
- After 7 days, refunds are considered case by case.

On a paid pass, **Plan & Usage** shows a **Request a refund** button where a cancel button would otherwise be. It opens the contact page. See [Refunds](#).

Tokens and API credits when a plan ends

Balance	What happens
Included monthly tokens	Expire at the end of the billing period, as they would anyway
Purchased tokens	Stay on the account (token packs are not on sale today)
Included API credits	End with the paid period
Purchased API credits	Stay on the account and do not expire. They become spendable again if the account returns to a plan with API access.

Overage is prepaid, so a plan ending never leaves an outstanding bill for API usage.

If recurring billing is ever introduced

The Subscription and Billing Policy and the Refund Policy both promise that, if a genuine recurring subscription is offered later, checkout will present it as one, with the renewal date and amount shown before you authorise payment and a working cancel control in your account — and that the policies will be updated before the first such charge. The dashboard already has a **Cancel Subscription** button for that case; it appears only on a plan that actually renews.

[WEBSITE](#) > [ACCOUNT AND BILLING](#)

Plans and pricing

Every Auric Artisan plan with its prices in US dollars and rupees, monthly and annual terms, token and API allowances, the full comparison table, add-ons, and what is not built yet.

This page restates the pricing page at <https://auricartisan.com/company/pricing/> as of the date above. The pricing page is authoritative: if a figure here and there ever differ, the pricing page and the checkout are what you are charged by.

The model in one paragraph

Every tool is free on every plan. Paid plans add conveniences and scale — ad-free browsing, watermark-free exports, a monthly token allowance for server-backed work, higher limits and, from Specialist, the REST API.

A paid plan is a one-time pass for one month or twelve months: it does not auto-renew, and there is nothing to cancel. Plan purchases carry a 7-day money-back window, and an account is required before any payment.

The four plans

Plan	Who it is for (pricing page)	Availability
Apprentice	"Every tool, free forever. No account needed to start creating."	Free, always
Artisan	"For creators who want ad-free browsing, watermark-free exports, and higher limits."	Available now
Specialist	"For power users — automate with the API and ship branded WCAG reports."	Coming soon — not on sale
Industrial Pro	"For labs, agencies, and organizations that need scale, security, and white-label."	Coming soon — not on sale

The buttons on the plan cards read **Get Started Free** (Apprentice), **Get Artisan** (Artisan) and **Coming soon** (Specialist and Industrial Pro, which cannot be selected). If you are signed in, your own plan's button reads **Current Plan**.

Prices

In US dollars

Plan	Monthly term	Annual term, shown per month	Annual term, billed once
Apprentice	\$0 forever	\$0	—
Artisan	\$12 / month	\$10 / month	\$120 / year
Specialist	\$29 / month	\$24 / month	\$290 / year
Industrial Pro	\$79 / month	\$66 / month	\$790 / year

In Indian rupees

Plan	Monthly term	Annual term, shown per month	Annual term, billed once
Apprentice	₹0 forever	₹0	—
Artisan	₹999 / month	₹832 / month	₹9,990 / year
Specialist	₹2,399 / month	₹1,999 / month	₹23,990 / year
Industrial Pro	₹6,499 / month	₹5,416 / month	₹64,990 / year

Monthly or annual

- Use the **Monthly / Annual** switch above the plan cards. The badge beside it reads **Save 17%**.

- A 12-month term costs ten times the monthly price — the pricing page calls it "a 16.7% saving (two months free)".
- In annual mode the large figure is the effective monthly price, and a line under it shows the real charge, for example "Billed annually at \$120/yr".
- Either term is a single payment. Neither renews.

Currency

- Select **USD \$** or **INR ₹** above the plan cards.
- On your first visit the page picks one for you: rupees if your device's time zone is India or your browser's language is an Indian locale, US dollars otherwise. Your choice is remembered in this browser.
- You are charged in the currency shown. The pricing page says payment is taken by Razorpay "for a business based in India", in US dollars outside India and rupees within it. Your bank may add its own foreign-transaction fee.

What each plan includes

These are the plan-card lists, word for word where possible. Select **What's included** on a card to expand or collapse its list; the number beside it is how many items it has.

Apprentice — free

- Every tool, unlocked — LUT Lab, ICC Parser, Science Lab, Industrial and more
- 100 fixed starter tokens — no monthly renewal
- Clinical and medical vision simulations
- Unlimited local use — no login required
- 20 saved projects · 25 palettes · 20 URL analyses / month
- Standard PNG and SVG exports
- Sponsored slots (ads) support the free tools
- Community support

Artisan

Everything free, plus:

- 250 tokens / month (about \$25 value)
- Ad-free browsing and ad controls
- Cloud sync across all your devices — coming soon
- Version history and one-click restore — coming soon
- Watermark-free Pro exports (PDF, ASE)
- Whole-site accessibility crawls — up to 24 pages a run
- 500 saved projects
- 250 pages analysed a month — unlimited vision simulations

- Email support

Specialist (coming soon)

Everything in Artisan, plus:

- 1,000 tokens / month (about \$100 value)
- Batch processing and bulk export — coming soon
- Full API access
- 1,000,000 API credits / month — 1 credit = 1 standard request, pooled across your keys
- 2,500 saved projects
- Branded WCAG accessibility reports
- Team workspace — up to 5 seats — coming soon
- Priority support (24h)

Industrial Pro (coming soon)

Everything in Specialist, plus:

- 2,500 tokens / month (about \$250 value)
- 10,000 saved projects
- 10,000,000 API credits / month — ten times Specialist, at 3,000 requests / min
- High-volume tool limits — 10,000 URL analyses / month
- White-label embedding and widget SDK — coming soon
- SSO / SAML, audit logs and IP allowlisting — coming soon
- 5 team seats included · scale up to 500 — coming soon
- Custom data-retention and 99.9% SLA — coming soon

The pricing page adds that Industrial Pro pricing "can be customized based on team size, usage, and feature needs" through **Talk to us**.

Compare all features

The comparison table on the pricing page, section by section.

Every tool — always free

Feature	Apprentice	Artisan	Specialist	Industrial Pro
Core colour and layout tools	Yes	Yes	Yes	Yes
LUT Lab · ICC Profile Parser	Yes	Yes	Yes	Yes
Color Science Lab · Gamut · HDR	Yes	Yes	Yes	Yes
Vision sims — clinical and medical	Yes	Yes	Yes	Yes

Feature	Apprentice	Artisan	Specialist	Industrial Pro
Industrial dye and material tools	Yes	Yes	Yes	Yes
Research and psychophysical engine	Yes	Yes	Yes	Yes

Tokens and metered usage

Feature	Apprentice	Artisan	Specialist	Industrial Pro
Included token allowance	100 fixed	250 / month	1,000 / month	2,500 / month
Pay-as-you-go top-ups	Not on sale — tokens come with a plan			

Experience, saving and cloud

Feature	Apprentice	Artisan	Specialist	Industrial Pro
Ad-free browsing and ad controls	—	Yes	Yes	Yes
Local saves	Yes	Yes	Yes	Yes
Cloud sync across devices	Coming soon — Artisan and above at launch			
Version history	Coming soon — 7 / 90 / 365 days by tier at launch			
Watermark-free exports	—	Yes	Yes	Yes
Export formats	PNG, SVG	+ PDF, ASE	+ WCAG reports	All + custom

Power and scale

Feature	Apprentice	Artisan	Specialist	Industrial Pro
Batch processing and bulk export	Coming soon — Specialist and Industrial at launch			
API access	—	—	Included	Included
API credits / month	—	—	1,000,000	10,000,000
API rate limit	—	—	300 / min	3,000 / min
Prepaid API overage (opt-in, off by default)	—	—	\$1 / 100,000 credits	\$1 / 100,000 credits
Plugins (Figma, Sketch, Penpot, VS Code)	Yes	Yes	Yes	Yes
Saved projects	20	500	2,500	10,000

Feature	Apprentice	Artisan	Specialist	Industrial Pro
URL analyses / month	20	250	1,000	2,500
Vision sims / day	25	Unlimited	Unlimited	Unlimited

Team, support and security

Feature	Apprentice	Artisan	Specialist	Industrial Pro
Team seats (multi-user accounts)	Planned — every account is single-user today			
Support	Community	Email	Priority email	Priority email · direct contact
White-label embedding	Planned — scoped case by case			
SSO / SAML · compliance reports	Planned — 2FA and account activity logs ship today			
Uptime SLA	No contractual SLA yet — best-effort operations			

The pricing page's note under the table: rows marked Planned, and the cloud-sync, version-history and storage figures, "describe what a plan will include as those systems ship — today the platform syncs account settings and saves your work locally. Everything else in this table is live now."

Note: Two figures differ between the plan cards and the table: the Industrial Pro card lists 10,000 URL analyses a month where the table lists 2,500, and the Apprentice card mentions 25 palettes, which the table does not list. Industrial Pro is not on sale yet. Ask through the contact page if a figure matters to a purchase.

Tokens and API credits

Two separate meters, explained in full on their own pages:

- **Tokens** pay for server-backed work you start in a website tool: 100 once on Apprentice, then 250, 1,000 or 2,500 a month. One token is sized at a reference rate of about \$0.10. See [Tokens](#).
- **API credits** pay for REST API calls: 1,000,000 a month on Specialist, 10,000,000 on Industrial Pro, none on Apprentice or Artisan. One credit is one standard request; heavier endpoints cost more. See [API credits and spend controls](#).

Neither pays for the other and nothing converts between them.

Optional add-ons

The **Optional add-ons** section of the pricing page lists:

Add-on	Status on the pricing page
Color Science Lab	Free for everyone
Image Optimization — batch compress, convert and resize images (WebP, AVIF, responsive sets)	Contact us
PDF Tools — generate, merge, split and watermark PDFs; accessible PDF reports	Contact us
Vision Simulation	Free for everyone
API Access	Included from Specialist
White-Label Studio	Not built yet — "Planned — talk to us"
Team Collaboration	Accounts are single-user today — "Planned — talk to us"
Security and Compliance	2FA free for everyone; SSO/SAML, IP allowlisting and formal compliance reports not built yet
Editor and app plugins	Free for everyone

Token estimator

The **Tokens — what each plan includes** section has a small estimator. Type how many tokens you expect to use a month (or use **–** and **+**, or select a plan tile). It names the smallest plan whose allowance covers that number, for example "Specialist includes 1,000 tokens every billing month — 300 fits inside that allowance." Above the largest allowance it suggests **Talk to us**. Top-ups are not on sale: "Tokens come with a plan today — we don't sell them separately."

Trials, discounts and custom deals

- **Free trial** — there is no trial of paid plans. The free Apprentice plan is the trial, and the 7-day money-back window covers a paid plan that is not right for you.
- **Nonprofit and student discounts** — arranged by hand, not with a code (there is no discount field at checkout). Write to Auric Artisan through the contact page with proof of eligibility before you buy. The pricing page says the price is then agreed, and either you pay the normal price and the difference is refunded through Razorpay, or the plan is activated without a charge.
- **Volume, custom rate limits or a contract** — use **Talk to us** on the pricing page.
- **Switching plans** — an upgrade starts when the payment clears. There is no downgrade to arrange: a pass runs for its term and stops. Automatic proration is not available; contact Auric Artisan if a change leaves a real difference in your favour.

WEBSITE > ACCOUNT AND BILLING

Profile section

Edit your Auric Artisan display name, username, bio, website, location and profile photo, choose an avatar from the gallery, and reach your public portfolio.

The **Profile** section (<https://auricartisan.com/auth/dashboard/#identity>) holds who you are on the site: the name that signs anything you publish, and the username your public page lives at. The panel is headed **Who you are**.

The fields

Field	What it is	Rules
Profile photo	Your photo, shown in the header, the dashboard and your portfolio	PNG, JPG or GIF, up to 2 MB. It is cropped to a square.
Display name	The name shown on your profile and anything you publish	Up to 64 characters
Username	Your handle, typed after the @. Your public page lives at this address, and you can sign in with it.	3–30 characters: letters, numbers and underscores. It can be changed once every 30 days.
Bio	"A line or two about what you make."	Up to 500 characters
Email address	The address you sign in with	Read-only. Hover over it: "Email changes are not supported yet — contact support."
Website	A link to your own site	Up to 200 characters, a full <code>http://</code> or <code>https://</code> address
Location	City and country, or anything you like	Up to 120 characters

Edit your profile

1. Open the dashboard and select **Profile**.
2. Change any of the fields.
3. Watch the **How you appear** card on the right: it previews the header of your public page as you type — photo, name, **@handle**, bio, website and location.

4. Select **Save changes**.

Result: "Profile saved." appears under the button. The note beside the button explains that the details are "Saved to your account, and used anywhere you publish."

If something is wrong, the message names it, for example "Bio must be 500 characters or fewer." or "Website must be a valid http(s) URL."

Change your username

1. Type the new handle in **Username**.
2. After a short pause the line under the field reports availability: "Checking...", then "@name is available." or a reason, such as "That username is taken.", with up to three suggestions ("Try: ...").
3. Select **Save changes**.

Result: "@name is yours." The username is saved before the other fields, so if the handle is refused, your other edits are not lost and the message says why.

Rules and limits:

- You can change your username once every 30 days. Before that, the message says "You can change your username again in N days."
- A username someone has just given up is held for 30 days before anyone else can take it ("That username was recently released and is not yet available.").
- Reserved words are refused, and so are names too close to an existing one ("That username is too similar to one in use.").
- Changing the username changes the address of your public portfolio.

Change your photo

From the Profile form

1. Double-click the **Profile photo** strip (or focus it and press **Enter** or **Space**).
2. Choose an image file.
3. The strip shows the file name with "will upload on Save", and the preview updates.
4. Select **Save changes**.

"That image is over 2 MB" or "Please choose an image file" appears if the file cannot be used. The photo is resized to a small square before it is uploaded.

From the photo viewer

Double-click your photo in the dashboard masthead to open the photo viewer. It shows the photo large, with your name and email, and three buttons. Changes here save straight away — there is no **Save changes** step.

Button	What it does
Change photo	Choose an image file; it is uploaded at once ("Photo updated.")
Gallery	Opens the Auric avatar gallery (below)
Remove	Removes the photo ("Photo removed."); your initial is shown instead

Close the viewer with the **×** button, by clicking outside it, or with **Esc**.

The Auric avatar gallery

Instead of a photo you can pick a drawn character avatar. Open the photo viewer and select **Gallery**.

- The header reads **Auric avatars** — "540 designs · 9 categories · 3 formats".
- Two tabs: **Free** (120 designs) and **Paid** (420 designs).
- Filters: **All**, **Companions**, **Wildlife**, **Farm**, **Ocean**, **Fantasy**, **Future**, **Botanical**, **Cosmic**, **Signature**, **3D** and **Animated**. A filter is greyed out when the open tab has nothing in it.
- The **Paid** tab opens with a featured signature character, **Auric Muse**, marked **3D** and **Animated**.
- Select a design to use it. It is applied immediately ("Avatar updated.").

On the free plan, paid designs are shown locked; selecting one opens an upgrade dialog explaining that "The premium avatar studio — 420 sculpted 3D and animated designs — is included with any paid plan." On a paid plan every design is available and the header chip reads "All 540 included". A chosen avatar is saved as an ordinary image, so it stays yours if your plan changes.

Public portfolio card

Below the form, the **Public portfolio** card is the doorway to your portfolio page. The portfolio is built on its own page, the Portfolio Builder.

Card heading	Meaning	Buttons
Portfolio builder	Shown while the dashboard checks, or if it cannot tell	Open the builder
Live	"Published at auricartisan.com/p/yourhandle", with the number of views so far	View page, Open the builder
Not published	Nobody can see it yet. If you have sections saved in this browser, the card says how many.	Open the builder

See [Portfolio](#) for building and publishing.

WEBSITE > ACCOUNT AND BILLING

Refunds

The 7-day money-back window on Auric Artisan purchases, how to ask for a refund, how long it takes, and what a refund removes.

This page summarises the Refund Policy at <https://auricartisan.com/legal/refund/>. The policy page is authoritative; this page explains how to use it.

What you can get back

Purchase	Refund terms
Plan pass (one month or twelve)	Within 7 days of purchase, refunded for any reason. After 7 days, considered case by case.
Prepaid API credits	Within 7 days of that purchase, to the extent they are unused. Credits already spent on API requests are not refundable; a partly used balance may be refunded pro rata at Auric Artisan's discretion.
Token packs	Within 7 days if unused; partly used packs may be refunded pro rata at Auric Artisan's discretion. Token packs are not on sale today.
Included allowances	Not refundable separately. The tokens and API credits that come with a plan are part of the plan price, and refunding the plan refunds them with it.
Advertising bookings	In full at any time before the campaign starts; after that, case by case.

After the 7-day window, the policy says refunds are considered against the purchase terms shown at checkout, payment-provider records, account status, usage and applicable law.

Ask for a refund

From the dashboard

1. Open the dashboard and select **Plan & Usage**.
2. In **Current Plan**, select **Request a refund**. (This button appears on a paid pass.)
3. The contact page opens. Choose the **Billing** topic.
4. Fill in your name and the email address on the account.
5. In the reference field (**Order or invoice ID**), paste your order reference. It is in your receipt email and on the confirmation page, and starts with `order_`.
6. In the message, give the purchase date and what you bought, and say you want a refund.
7. Select **Send**.

From the contact page directly

Go to <https://auricartisan.com/company/contact/> and follow steps 3–7. The policy says both routes "reach the same place; the button simply saves you finding the page". Use the email address associated with the purchase.

Result: you get a confirmation email, and a reply from Auric Artisan in the same thread. The Billing topic lists a reply time of 1–2 days.

How long it takes

Approved refunds are issued through Razorpay to the original payment method within 5–7 business days of approval. Your bank or card issuer may take longer to show it on your statement.

What a refund removes

- **A refunded plan** ends at once: plan benefits are removed and the account returns to the free Apprentice plan.
- **Refunded tokens or API credits** are deducted from the balance they were granted to.
- **Your work stays yours.** Content and projects you created are not removed.

The confirmation page for a refunded order says "The payment for this order has been refunded in full" and that anything the order activated has been removed. The payment appears as **Refunded** in **Invoices & Payment History**.

Charges you do not recognise

If you see a charge that appears to be from Auric Artisan and you did not make it, or you were asked to pay outside the official checkout, contact Auric Artisan through the contact page with the date, amount, payment provider and any transaction reference. Do not send full card numbers, passwords or other secrets.

WEBSITE > ACCOUNT AND BILLING

Security & Privacy section

Check your password and two-step status, manage signed-in devices, review sign-ins, export your data and reach the danger zone in the Auric Artisan dashboard.

The **Security & Privacy** section (<https://auricartisan.com/auth/dashboard/#security>) answers two questions: who can get into the account, and what leaves it. Its heading counts what is signed in right now, for example "2 devices are holding this account open." The line beneath reads: "End anything you do not recognise — a device you revoke here is signed out immediately."

The older addresses `#settings` and `#sessions` open this section too.

The readout strip

Four cells state the account's condition. The cell that needs attention is highlighted.

Cell	What it says	Control
Password	When the password was last set: "Set when you signed up", "Unchanged since you signed up", "Changed today", "Changed yesterday" or "Changed N days ago"	Change — see Passwords
Two-factor	"Off — nothing but your password" (highlighted), or "On — N backup codes left"	Enable 2FA or Disable 2FA — see Two-step verification
Usage data	"On — anonymous usage only" or "Off — nothing is collected"	A switch that records your choice on your account
Cookies	Your cookie choice: "Not answered yet", "Necessary only", or "Necessary + " the optional categories you accepted	Change opens the Cookie Policy page, where you change it

The Usage data switch

Select the switch to turn it on or off. The choice is saved to your account at once. If it cannot be saved, the cell says "Changed here, but not saved to your account"; try again later.

This switch is separate from your cookie choice. On the website, analytics events are only sent when you have accepted the **Analytics** cookie category, and never when your browser sends Do Not Track or Global Privacy Control (see [Privacy overview](#)).

Signed-in devices

A sheet lists every browser or device where the account is signed in, with **Sign out everywhere** at the top.

Column	Shows
Device	An icon (phone or computer), the browser and system — for example "Safari on iPhone" — and "Signed in 3 d ago" or This device
Where	The network address the sign-in came from

Column	Shows
Last active	How long ago it was last used, for example "12 min ago"
(action)	Revoke , or the This device label on your own row

Your own device is always the first row and has no **Revoke** button, so you cannot sign yourself out by accident here. If the list cannot tell which row is yours, it says "This list does not say which device you are reading on, so every row can be revoked — including this one."

End one session

1. Find the row you do not recognise.
2. Select **Revoke**.

Result: that device is signed out immediately and the row disappears.

Sign out everywhere else

1. Select **Sign out everywhere**. The button changes to **Sign out every other device?**
2. Select it again within about six seconds to confirm. If you wait, it resets.

Result: "Signing out...", then every other device is signed out. The device you are using stays signed in. To sign out this device too, use **Sign out** in the header account menu.

Sign-in history

Under the sheet, a line summarises the last 30 days, for example "14 sign-ins in the last 30 days, none failed" or "..., and 2 failed attempts". Failed attempts are highlighted because they are worth a second look. If nothing is recorded: "No sign-ins recorded in the last 30 days".

Select **See all sign-ins** to open a list of recent successful sign-ins (up to six), each with the browser, system, network address and time. Select **Hide sign-ins** to close it.

If you see failed attempts you did not make, change your password and turn on two-step verification.

Export everything

A single row: **Export everything** — "Your profile, portfolio, collections and receipts as one JSON file. Nothing secret is included — passwords, two-factor material and API keys stay out." Select **Export**. What the file contains is described in [Export your data](#).

Danger zone

The last panel is the **Danger zone**, which holds the two actions that cannot be undone: **Erase this browser's workspace** and **Delete this account**. It starts **Locked**. To open it you type a confirmation sentence and your

password, and it then stays open for five minutes. A list headed **Behind this door** names what it contains before you unlock it.

Everything reversible lives elsewhere: devices on the sheet above, keys under Plan & Usage, your public page in the Portfolio Builder.

Full walkthrough: [Delete your account](#).

WEBSITE > ACCOUNT AND BILLING

Sign in and sign out

Sign in to Auric Artisan with your email or username, with Google or GitHub, or with a second factor, and understand how long a sign-in lasts.

The sign-in page is <https://auricartisan.com/auth/>. Select **Sign in** in the site header to open it; it returns you to the page you were on once you are in.

Sign in with your email or username

1. Open <https://auricartisan.com/auth/>. The **Sign In** tab is selected and the panel reads **Welcome back**.
2. In **Email or username**, type either the email address on the account or your username (without the @).
3. Type your **Password**. Select the eye button to show it.
4. Optional: tick **Remember me** to stay signed in on this browser (see [How long a sign-in lasts](#)).
5. Select **Sign In**.
6. The first time you submit, the **Auric human check** appears: repeat the three-mark sequence and select **Verify sequence**, then select **Sign In** again. How the check works is described in [Sign up](#).
7. If the account has two-step verification, the **Second factor** panel appears; see [Sign in with a second factor](#).

Result: the message "Identity confirmed. Opening your workspace..." appears and the site opens:

- the page you were trying to reach, if you came from a link that needed sign-in; otherwise
- the dashboard, if your account has no username yet; otherwise
- the home page.

Form messages

Message	What to do
"Enter your email or username."	The first field is empty.
"Enter a valid email address."	You typed an @, so the field is checked as an email address, and it is not a valid one.
"Usernames are at least 3 characters." or "Use letters, numbers and underscores only."	Without an @, the field is checked as a username.
"Password is required."	The password field is empty.
"Complete the Auric human check before continuing."	A check is on screen but not completed.

Wrong credentials, a locked account or a server problem show a message at the top of the panel. See [Troubleshooting](#).

Sign in with Google or GitHub

1. On the **Sign In** tab, under **or continue with**, select **Google** or **GitHub**.
2. Complete the provider's sign-in if asked.

Result: you return to Auric Artisan signed in. Use the same provider you signed up with; an email address that already has a password account cannot be signed in with a different provider (the message is "This email already has an account. Sign in with the method already connected to it.").

Sign in with a second factor

If two-step verification is on, a second panel appears after your password:

1. The panel **Second factor** says "Enter the current six-digit code. This sign-in expires in 10:00", with a countdown.
2. Open your authenticator app and type the current 6-digit code in **Verification Code**.
3. Select **Verify**.

Result: "Second factor confirmed. Opening your workspace..."

If you do not have your authenticator:

1. Select **Use a backup code**.
2. Type one of your backup codes in **Backup Code** (format `XXXX-XXXX-XXXX-XXXX`).
3. Select **Verify**. Each backup code works once and is used up only when it is accepted.

Select ← **Back to code entry** to return to the 6-digit code, or **Cancel sign-in** to start again. If the 10-minute countdown runs out, the page returns to the sign-in form with "That sign-in request expired. Start again."

Details: [Two-step verification](#).

How long a sign-in lasts

Choice	How long you stay signed in
Remember me ticked	Up to 30 days on this browser. The Cookie Policy lists the session cookie as lasting "up to 30 days, or until sign-out or expiry". A sign-in that goes unused for seven days ends sooner.
Remember me not ticked	Until you close the browser, and no longer than 24 hours.
Google or GitHub	Treated as a normal sign-in without Remember me.

Signing in on one device does not sign you out anywhere else. Each browser is a separate signed-in device, listed under **Security & Privacy** > **Signed-in devices**.

Some actions end your sign-ins on purpose:

- Changing your password signs you out everywhere, including the browser you changed it in. Sign in again with the new password.
- Resetting a forgotten password also ends all existing sign-ins.
- Revoking a device, or **Sign out everywhere**, ends those sessions immediately.
- Deleting the account signs you out everywhere.

If you are already signed in

Opening the sign-in page while signed in sends you straight on to the page you asked for, or the home page. If your email address is not verified yet, the page shows **Confirm your inbox**. instead — see [Verify your email](#).

The account menu

When you are signed in, the header shows your photo, first name and plan instead of **Sign in**. Select it to open the account menu:

Item	Goes to
Signed in as	Shows your name and email address
Dashboard	"Overview and recent activity" — the dashboard
Profile	"Identity and profile photo" — the Profile section
Billing & plan	"Subscription and invoices" — the Plan & Usage section
API keys	"Manage developer access" — the Plan & Usage section
Sign out	"End this session securely"

Sign out

1. Select your account chip in the header.
2. Select **Sign out**.

Result: this browser's session ends. Other devices stay signed in; to end them too, use **Sign out everywhere** in [Security & Privacy](#).

WEBSITE > ACCOUNT AND BILLING

Sign up

Create an Auric Artisan account with an email address and password, or with Google or GitHub, including every field rule and the human check.

You can create an account in two ways: with an email address and a password, or with an existing Google or GitHub account. Both are free and neither asks for a card.

The sign-up form is at <https://auricartisan.com/auth/#register>. You can also open <https://auricartisan.com/auth/> and select the **Create Account** tab, or select **Create account** in the site header.

Sign up with email and password

1. Open <https://auricartisan.com/auth/> and select **Create Account**. The panel is headed **Create your identity**.
2. Fill in the fields:

Field	What to enter	Rules
Display Name	The name shown on anything you publish	Required, 2–64 characters
Username	Your public handle, typed after the @	Required, 3–30 characters: letters, numbers and underscores only. You can sign in with it instead of your email.
Email	Your email address	Required, a valid address

Field	What to enter	Rules
Password	Your password	12–128 characters, upper and lower case letters, at least one number and one symbol, no character repeated four or more times in a row, not a common password
Confirm Password	The same password again	Must match

- As you type the username, a tick means it is available and a cross means it is not. Hover over the mark, or read the message under the field, for the reason.
- As you type the password, a checklist shows which of the six rules are met, and a label reads **Password strength: Weak, Fair, Good or Strong**. Select the eye button to show or hide what you typed.
- Tick **I agree to the Terms of Service and Privacy Policy**. Both names are links to the full documents.
- Select **Create Account**.
- The **Auric human check** appears the first time you submit, with the message "One quick check that you are human, then we will sign you in." Complete it (see below), then select **Create Account** again.

Result: the panel changes to **Confirm your inbox**. It shows your email address partly masked, a 24-hour **Verification window** countdown, a **Resend** button (available after 60 seconds) and **Continue to limited workspace**. Continue with [Verify your email](#).

Note: If the email address already has an account, the same confirmation screen appears but offers **Return to sign in** instead of **Continue to limited workspace**. No second account is created. Sign in with the existing account, or use **Forgot password?** if you do not remember its password.

The Auric human check

The human check replaces a traditional CAPTCHA. It proves a person is at the keyboard for this one attempt.

- A sequence of three marks is shown, with a countdown.
- Below it, select the same marks in the same order from the choices. Each choice you select fills the next answer slot.
- To undo a choice, select its slot and it is removed.
- When all three slots are filled, select **Verify sequence**.
- If it matches, the status reads "Human signal verified. This proof is single use."

Message	What it means
"Enter your email or username before verifying the sequence."	The check is tied to the address or username in the form. Fill that in first.

Message	What it means
"Take a moment, then verify the sequence again."	You answered faster than a person usually can. Wait a second and select Verify sequence again.
"That did not match. Repeat the displayed sequence."	The order was wrong. The slots are cleared; try again.
"This check expired. Request a new sequence."	The countdown ran out. Select New sequence .
"A fresh human check is required for another attempt."	Each proof works once. After a failed or completed attempt, complete a new check.

A proof belongs to the email or username you typed when you verified. If you change that field afterwards, the proof no longer applies and you need a new check.

Sign up with Google or GitHub

1. On the **Create Account** tab, under **or sign up with**, select **Google** or **GitHub**.
2. Sign in to that provider if asked, and allow Auric Artisan to use your account.
3. You return to Auric Artisan signed in.

Result: your account is created with the provider's email address, which counts as verified, so there is no verification email to wait for. A welcome email confirms that you signed in with Google or GitHub, "so there's no password to remember."

Things to know about provider accounts

- An account created this way has no Auric Artisan password. Actions that ask for your password — such as unlocking the danger zone to delete the account — ask you to set one first. To set one, use **Forgot password?** on the sign-in page with the account's email address. See [Passwords](#).
- If an account already exists for the provider's email address, you see "This email already has an account. Sign in with the method already connected to it." Use that method instead.
- If the provider account has no verified email address, you see "Your provider account has no verified email address." Verify it with the provider, or sign up with email and password.

Other messages you might see after returning from a provider are listed in [Troubleshooting](#).

After you sign up

- You are on the free **Apprentice** plan.
- If you have no username (possible for some older accounts), the dashboard asks for one.
- Next: [Verify your email](#), then [Getting started with the dashboard](#).

[WEBSITE](#) > [ACCOUNT AND BILLING](#)

Tokens

What Auric Artisan tokens pay for, how much each plan includes, when included tokens expire, how to claim and check them, and how they differ from API credits.

Tokens meter the work that runs on Auric Artisan's servers when you start it from a website tool — for example rendered page analyses, snapshots and whole-site accessibility crawls in the Analyzer. Everything that runs in your browser is free and unmetered. Tokens belong to your account, so you need to be signed in to have or spend them.

How many tokens each plan includes

Plan	Included tokens	Renews?
Apprentice (free)	100, once	No — a one-time starter grant
Artisan	250 a month	Yes, each billing month
Specialist (coming soon)	1,000 a month	Yes, each billing month
Industrial Pro (coming soon)	2,500 a month	Yes, each billing month

One token is sized at a reference rate of about \$0.10 of metered work. The pricing page describes the Artisan allowance as "250 pages a month however you spend them — a 24-page crawl costs 24".

What a run costs

The Analyzer shows the token cost of a run beside the button that starts it — "This run", the cost, and your balance — before you spend anything. After a site scan it shows a receipt: what was authorised, what was scanned, what was charged, and anything returned (pages that failed are free, and tokens held for pages a site did not have are given back). The Analyzer's own guide explains the costs of each kind of run: [Analyzer](#).

If you do not have enough, the meter says how many more you need, for example "3 more than you have." For a site scan it offers the number of pages your balance can cover.

Claim your tokens

1. Sign in.

2. Open the Analyzer at <https://auricartisan.com/tool/analyzer/>.
3. In its token meter, select **Claim 100 free tokens** (signed out, the button reads **Sign in · 100 free tokens** and takes you to sign in first).

Result: the meter shows your balance. The starter grant is given once per account; clearing your browser's data does not give you a second one, and the balance you had comes back when you sign in again.

On a paid plan, the dashboard's **Tool tokens** card tells you when "This period's allowance is waiting to be claimed."

Check your balance

Your balance is in two places:

- **Dashboard > Overview > Tool tokens** — the balance, "of 250 a month" (or "tokens" for the one-time grant), a bar for this period's included tokens, and a note such as "250 of these lapse at the end of the period." See [Overview section](#).
- **The Analyzer's token meter** — your balance next to the cost of the run you are about to start.

Expiry

- **Included monthly tokens** expire at the end of the billing period in which they were granted. They do not roll over. When a new period starts, a new allowance is granted.
- **The Apprentice starter grant** does not expire, and it does not refresh when it is spent.
- **Purchased tokens** do not expire at the period boundary, according to the Subscription and Billing Policy. Token packs are not on sale today, so today every token comes with a plan.
- When you spend tokens, the included (expiring) ones are used first.

When you run out

Server-backed runs stop; everything that runs in your browser keeps working. The Analyzer says "You're out of tokens." Your options are to wait for your next monthly allowance, or to move to a plan with a larger allowance. Top-ups are not on sale; if you expect to pass your allowance, the pricing page asks you to tell Auric Artisan what you need through the contact page.

Tokens are not API credits

	Tokens	API credits
Pays for	Server-backed work you start in a tool on the website	Requests your own code makes to the REST API
One unit	One unit of metered tool work, about \$0.10	One standard API request; heavier endpoints cost 2–25

	Tokens	API credits
Included	100 once on Apprentice; 250, 1,000 or 2,500 a month	None on Apprentice or Artisan; 1,000,000 or 10,000,000 a month
When it runs out	Server-backed runs stop	Calls are refused, unless you turned on prepaid overage

Neither pays for the other. Running out of tokens never stops your API calls, and running out of API credits never stops a crawl.

Refunds and tokens

Refunding a plan payment also removes the tokens that purchase granted. See [Refunds](#).

WEBSITE > ACCOUNT AND BILLING

Two-step verification

Protect your Auric Artisan account with authenticator-app codes and single-use backup codes, sign in with them, and turn them off.

Two-step verification (the dashboard calls it **Two-factor** or **2FA**) adds a second check after your password: a six-digit code from an authenticator app on your phone or computer. The codes use the standard TOTP method (time-based one-time passwords, which change every 30 seconds), so any common authenticator app works. Two-step verification is free on every plan.

Turn it on

1. Install an authenticator app if you do not have one.
2. Open the dashboard and select **Security & Privacy**.
3. The **Two-factor** cell in the readout strip reads "Off — nothing but your password" and is highlighted while it is off. Select **Enable 2FA**.
4. The form below the strip says "Setting up... fetching your secret." and then "Scan this with your authenticator app, then enter the 6-digit code it shows."
5. Scan the QR code with the app. If you cannot scan, use the text under "Can't scan? Enter this secret manually:", or select **Open in authenticator** on a device that has the app.
6. Type the 6-digit code the app shows into the box (placeholder **123456**).

7. Select **Verify & enable**.

Result: "Two-factor authentication is ON. Store these one-time backup codes somewhere safe:" followed by ten backup codes.

8. Select **Download backup codes** to save them as a text file named `auric-artisan-backup-codes.txt`, or copy them somewhere safe and offline.

The **Two-factor** cell now reads "On — 10 backup codes left", and the button changes to **Disable 2FA**.

Important: The backup codes are shown once. There is no screen to view them again. Keep them where you can reach them if you lose your phone.

Sign in with two-step verification

1. Sign in with your email or username and password as usual.
2. The **Second factor** panel appears with a 10-minute countdown.
3. Type the current code from your authenticator app in **Verification Code** and select **Verify**.

If you do not have the app with you, select **Use a backup code**, type one backup code (format `XXXX-XXXX-XXXX-XXXX`) and select **Verify**. Each backup code works once; it is used up only after it is accepted. The **Two-factor** cell shows how many are left.

Full sign-in details: [Sign in and sign out](#).

Turn it off

1. Open **Security & Privacy** and select **Disable 2FA**.
2. The form says "Confirm your password and a current authenticator code to turn 2FA off."
3. Type your **Account password** and a current code from your authenticator app.
4. Select **Disable 2FA**.

Result: "Two-factor authentication disabled." The cell returns to "Off — nothing but your password".

Get new backup codes

The dashboard has no separate control for new backup codes. If you are running low, turn two-step verification off and on again: completing setup replaces any old backup codes with a new set of ten, and you scan a new QR code into your app.

Setup messages

Message	What to do
"Code is invalid. Try again."	Type the code currently shown in the app. Check that your device's clock is set automatically.
"2FA setup expired — start again."	The setup took too long. Select Enable 2FA again and scan the new code.
"Code is invalid." (when turning off)	Use a current code from the app.
"Password is incorrect." (when turning off)	Retype your account password.

How it is protected

The Security page (<https://auricartisan.com/security/>) states that two-factor secrets are encrypted before they are stored, under a key held separately, so a copy of the database alone cannot generate anyone's codes. The QR code is drawn by Auric Artisan itself, so the secret is never sent to an outside image service.

Reminders on the dashboard

While two-step verification is off, the Overview shows it as **Not set up** with a **Set it up** button, and its **Next** list leads with **Turn on two-factor**. You can dismiss that suggestion with its × button.

If you lose your authenticator

- Use a backup code to sign in, then turn two-step verification off and on again with your new device.
- If you have neither the app nor a backup code, contact support through <https://auricartisan.com/company/contact/> (topic **Security**) from the email address on the account. See [Contact and support](#).

[WEBSITE](#) > [ACCOUNT AND BILLING](#)

Verify your email

Confirm the email address on your Auric Artisan account, resend the link, and understand what stays locked until you do.

When you sign up with an email address and password, Auric Artisan sends a one-time link to prove the address is yours. Accounts created with Google or GitHub are already verified and skip this page.

What stays locked until you verify

You can sign in and use the dashboard straight away — the sign-up screen calls this the "limited workspace". The sign-in page lists what stays locked until the address is verified:

- billing (buying a plan),
- promotions,
- API keys,
- device approval (signing in the command-line tool).

Verify from the email

1. Open the verification email from Auric Artisan and select its link.
2. The page <https://auricartisan.com/auth/verify-email/> opens with the heading **One click confirms it is really you.** It removes the link's code from your address bar straight away.
3. Check that you asked for this account. The panel reads **Ready to verify.** "Confirm this address only if you requested the account."
4. Select **Confirm email ownership.**

Result: the heading changes to **Email verified.** with "Ownership is confirmed and protected account features are now unlocked." and the message "Verification complete. This link cannot be used again." Select **Open workspace** to go to the dashboard. A welcome email follows.

Note: The page asks you to press a button on purpose. Email security scanners and link previews open links automatically; the extra step means a preview can never verify an account on your behalf.

Time limits

- A verification link works for 24 hours. The page shows the time left as **Maximum link window**, and says "Server time is authoritative".
- On the sign-up screen, **Verification window** counts down the same 24 hours. If it reaches zero you see "The verification window expired. Request a new email."
- Each new link replaces the previous one. Always use the newest email.

Get a new link

There are three places to ask for a new link. Each has a short wait between requests (60 seconds by default).

Where	Control	Confirmation
The Confirm your inbox. screen after sign-up, or the sign-in page while unverified	Resend verification email (shows Resend in 60s while waiting)	"A fresh verification link has been sent."
The verification page, after a failed link	Send a fresh link (shows Send again in a number of seconds while waiting)	"A fresh one-time link was sent. Open the newest email to continue."
The dashboard's Your account is nearly there panel	Send it again	"Sent — check your inbox"

You must be signed in to request a new link. If you are not, the verification page says "Sign in to request a fresh verification link."

Messages on the verification page

Heading	Meaning	What to do
Verification link missing.	The address you opened has no verification code	Open the complete link from the email, or request a fresh one
Verification link unavailable.	"The link has expired, was already used, or has been replaced."	Request a fresh link and use the newest email
Verification could not be completed.	The link may have expired, been used or been replaced	Request a fresh link
Verification link expired.	The one-time window closed	Request a fresh verification email
Verification status unavailable.	The page could not check the link	Try again from the latest email

If the service cannot be reached, the page says your link is still available and you can try again.

Show as table / Hide table	Switches the daily chart to a table	—
Create your first key / Create key	Opens the key name field	Up to 10 keys
Key name, Create, Cancel	Names and creates a key	Name up to 64 characters
Copy, Done	Copy the new key; close the panel	Shown once
Revoke	Revokes a key	Immediate
Add credits	Opens the pack picker	100,000 / 550,000 / 2,400,000 / 13,000,000 credits
Paid overage switch	Lets calls spend prepaid credits past the allowance	Off by default; turning on needs Turn on paid overage (or Keep it off)
Monthly spend cap, Save	Caps overage per month	\$0–\$10,000; 0 = no cap of your own
API key, Watch traffic	Connects the live feed	Kept in this tab only
Errors only, Pause / Resume, Disconnect	Live feed controls	—
View API Docs, Endpoint Index	Open the API documentation	—

Guides: [Plan & Usage section](#), [API keys](#), [API credits and spend controls](#).

Security and Privacy section

Control	What it does
Password › Change	Opens the change form: Current password , New password (12+ chars, mixed) , Repeat new password , Update password , Cancel
Two-factor › Enable 2FA	Setup: QR code, secret, Open in authenticator , code, Verify & enable , Download backup codes
Two-factor › Disable 2FA	Account password , code, Disable 2FA
Usage data switch	Saves your usage-data choice to the account
Cookies › Change	Opens the Cookie Policy page
Sign out everywhere	Press twice within about six seconds; signs out every other device
Revoke	Signs out one device
See all sign-ins / Hide sign-ins	Shows up to six recent successful sign-ins
Export	Downloads the JSON export

Danger zone

Control	What it does
First, type this sentence	Must match the displayed sentence word for word
Then your account password	Your password
Unlock for 5 minutes	Opens the zone; Lock now closes it
Erase › Type ERASE to confirm › Erase / Cancel	Clears this browser's workspace
Delete account... › Type DELETE to confirm, Confirm your password › Permanently delete account / Cancel	Deletes the account

Guides: [Security & Privacy section](#), [Delete your account](#).

Finish setting up panel

Control	What it does
Username	Suggested handle, live Available check
Your name	Up to 64 characters
Send it again	Resends the verification link
Save, Later, ×, Esc	Save, or dismiss for a week

Pricing page controls

Address: <https://auricartisan.com/company/pricing/>

Control	What it does
Monthly / Annual switch	Shows monthly or annual prices; Save 17% badge
USD \$, INR ₹	Chooses the currency (remembered in this browser)
What's included	Expands or collapses a plan card's feature list
Get Started Free	Opens the sign-in page
Get Artisan	Starts checkout (asks you to sign in first if needed)
Coming soon	Disabled; the tier is not on sale
Current Plan	Your own plan; disabled
Token estimator: number field, −, +, plan tiles	Recommends the plan whose allowance covers your usage
Talk to us, Compare plans, Open the tools — free, Create an account	Links

Upgrade dialog

Some paid conveniences open a dialog instead of a page. Its title is "Do more with" a plan, "You're on a roll" (when a free allowance is used up), or "Not available yet" (when the feature belongs only to a tier not on sale). It lists up to four perks and the monthly price, with **Upgrade to** the plan and **Not now** (or **See the roadmap** and **Close**). Its footer reads "Every tool stays free", "One-time — never auto-renews" and "7-day money-back". Close it with **x**, **Not now**, **Esc** or by clicking outside.

Troubleshooting

Fixes for problems with signing in, verification emails, passwords, two-step codes, payments, invoices, API keys and the Auric Artisan dashboard.

Each entry gives the symptom, the likely cause and what to do. For problems with the website in general — browser support, cookies, offline use — see [Help: troubleshooting](#).

I cannot sign in

Symptom	Why	What to do
"Enter a valid email address." although you typed a username	The field contains an @, so it is checked as an email address	Type the username without @, or your full email address
The sign-in is refused with a credentials message	Wrong email, username or password	Check for typing errors, then use Forgot password?
Refused after several attempts	Sign-in attempts are rate-limited; repeated failures can lock sign-in for a while	Wait, then try again, or reset your password
"Complete the Auric human check before continuing."	A human check is on screen and not finished	Repeat the three marks and select Verify sequence , then Sign In
The human check keeps expiring	Each check lasts a few minutes and is used once	Select New sequence , answer, and sign in straight away
"Enter your email or username before verifying the sequence."	The check is tied to the identifier in the form	Fill in Email or username first
You signed up with Google or GitHub and have no password	Provider accounts have no Auric Artisan password	Use the same provider button, or set a password with Forgot password?
"That sign-in request expired. Start again."	The 10-minute second-factor window ran out	Sign in again and enter the code promptly
You are signed in but keep being sent to the sign-in page	Your session ended (password change, revoked device, or it expired)	Sign in again

Google or GitHub sign-in errors

After returning from the provider, one of these may appear at the top of the sign-in page:

Message	What to do
"OAuth response was incomplete."	Try again from the Auric Artisan sign-in page.
"OAuth session expired. Try signing in again."	You took too long, or opened the provider page in another tab. Start again.
"Could not complete sign-in with that provider."	Try again; if it persists, use email and password.
"Your provider account has no verified email address."	Verify your email with Google or GitHub, or sign up with email and password.
"This email already has an account. Sign in with the method already connected to it."	Sign in with email and password (or the other provider) you used first.
"Could not link that account. Try signing in again."	Try again.
"Signed in, but the session could not be started."	Check that your browser allows cookies for auricartisan.com, then try again.

Message	What to do
"OAuth sign-in failed."	Try again, or use email and password.

The verification email did not arrive

1. Wait a minute and check your spam or junk folder.
2. Check the address shown (partly masked) on the **Confirm your inbox.** screen.
3. Select **Resend verification email** once the wait timer ends. Each new link replaces the old one; use the newest.
4. From the dashboard, use **Send it again** in the **Your account is nearly there** panel.
5. If the address is wrong, it cannot be changed from the dashboard; contact support.

If the link says **Verification link unavailable.**, it has expired (after 24 hours), been used, or been replaced. Request a fresh one.

The reset email did not arrive

- The reset form never says whether an address has an account. If nothing arrives, check that you typed the email address on the account (not your username) and look in spam.
- Reset requests are rate-limited; wait a few minutes before asking again.
- Links last one hour and work once. Request a new one if yours has expired.
- Accounts created with Google or GitHub receive a reset link too; that is how you add a password.

My authenticator code is refused

Symptom	What to do
"Code is invalid. Try again." during setup	Enter the code currently on screen. Make sure your phone's date and time are set automatically.
"2FA setup expired — start again."	Select Enable 2FA again and scan the new QR code.
Codes are refused at sign-in	Check the device clock, and that you are using the Auric Artisan entry in your app. Use a backup code if needed.
No app and no backup codes	Contact support through the contact page (topic Security) from the account's email address.

The dashboard

Symptom	Why	What to do
"Could not load subscription details."	The plan could not be read	Refresh. If it persists, sign out and in again.
Panels stay empty or show "—"	Figures appear only when there is something true to show	This is expected for a new account; see Overview section
Usage meters differ between browsers	Meters include counts recorded in each browser	Expected; they converge as the account's own figures update
Your work shows nothing although you saved work	The library lives in the browser where you saved it	Open the dashboard in that browser
The Change plan cards show rupees	These cards show prices in rupees	Use the pricing page to see US dollars
"Changed here, but not saved to your account" on Usage data	The choice could not be saved	Try the switch again later
"This list does not say which device you are reading on..."	The device list could not mark your device	Be careful: every row, including yours, can be revoked
Sign out everywhere did nothing	It needs a second press within about six seconds	Press Sign out every other device? to confirm

The danger zone will not unlock

Message	What to do
"Not yet — it has to match word for word."	Retype the sentence exactly as displayed.
"That password is not right."	Retype your password.
"Set an account password before using these actions."	Add a password first: Passwords .
"This page has lost its session token, so it cannot send this safely. Reload the page and try again — your password is fine."	Reload. This happens if you signed out in another tab, or opened the site over an insecure address.
"This page could not prove it is still your session..."	Reload the page.
"The danger zone is not available on this server yet. Nothing is wrong with what you typed."	The zone shows Unavailable . Contact support to delete the account.
"Too many attempts. Try again in a few minutes."	Wait before trying again.

Payments and checkout

Symptom	Why	What to do
Selecting Get Artisan shows "Sign in first..."	An account is required before payment	Select Sign in or create a free account ; you return to the pricing page
The payment is refused because the email is unverified	Billing is locked until you verify	Verify your email, then try again
A foreign card is declined at the last step	Non-Indian cards and American Express depend on permissions on Auric Artisan's payment account	Nothing is charged. Try UPI or another card, or tell Auric Artisan through the contact page so they can arrange it
"Checkout is briefly unavailable, so nothing was charged."	The checkout could not start	Try again in a moment, or contact support
"Checkout cancelled."	The checkout window was closed	Nothing was charged; start again if you meant to pay
The confirmation page stays on Confirming your payment	Razorpay's confirmation is delayed	Wait; do not pay again. Check Billing history ; contact support with the order reference if it does not update
Payment not completed but money left your account	A bank hold or a delayed confirmation	Holds are released automatically. If the money does not return, contact support with the order reference
The plan does not show after paying	The page loaded before the update	Refresh the dashboard. Quote the order reference if it still does not show
You were charged twice	—	Contact support with both order references
Current Plan on the pricing page does not match	You are signed in to another account	Check the email in the header account menu

Invoices

Symptom	What to do
Invoice not found	Sign in to the account that made the payment and open the invoice from Invoices & Payment History .
You need a GST tax invoice	Auric Artisan is not currently registered for GST; receipts are payment receipts. See Invoices and receipts .

API keys and credits

Symptom	Why	What to do
No create button in Your API Keys	Your plan does not include the API	API access starts at Specialist
"You can hold at most 10 active keys."	The account limit	Revoke a key you do not need
You lost a key	Keys are shown once	Create a new key and revoke the old one
Calls return 402 with PLAN_UPGRADE_REQUIRED	The account's plan does not include the API	Move to a plan with API access
Calls return 429	The monthly allowance is used up, the rate limit was hit, or overage cannot continue (no prepaid balance, spend cap or ceiling reached)	Wait for the reset, slow down, add credits, or raise your cap
Usage & cost says "That key was refused."	The pasted key was revoked or mistyped	Paste another key
The pack picker has nothing to buy	Credits belong to plans with API access	See API credits and spend controls
"Enter a cap between \$0 and \$10,000."	The cap is out of range	Enter a value in range, or 0 for no cap of your own

[WEBSITE](#) > [ACCOUNT AND BILLING](#)

FAQ

Short answers to common questions about Auric Artisan accounts, plans, payments, tokens, API keys and deleting an account.

Accounts

Do I need an account to use the tools?

No. Every tool is free with no login required. An account is needed for server-backed tool work (tokens), buying a plan, API keys, publishing a portfolio, and account security. See [Create an account \(optional\)](#).

Can I sign in with my username?

Yes. The first field on the sign-in page accepts your email address or your username.

Can I change my email address?

Not from the dashboard yet. The field is read-only: "Email changes are not supported yet — contact support."

How often can I change my username?

Once every 30 days. A username that someone gives up is held for 30 days before anyone else can claim it.

Why was I signed out after changing my password?

Changing a password signs out every device, including the one you are using, so that anyone holding an old session loses it. Sign in with the new password.

Can I have more than one account?

The FAQ page says multiple accounts are technically permitted, but using them to get around usage limits may lead to all of them being suspended.

Is there an inbox in my account?

No. Everything arrives by email. See [Emails and messages](#).

Plans and payments

Are the tools really free?

Yes, every tool on every plan. Paid plans add conveniences such as ad-free browsing, watermark-free exports, a monthly token allowance and higher limits. See [Plans and pricing](#).

Which plans can I buy?

Artisan, today. Specialist and Industrial Pro are marked **Coming soon** on the pricing page.

Will I be charged again automatically?

No. A plan is a one-time pass for one month or twelve months. Nothing renews, no card is stored, and there is nothing to cancel.

How do I cancel?

There is nothing to cancel. The pass ends by itself and the account returns to the free plan. To stop early, ask for a refund: [Refunds](#).

Is there a free trial?

No. The free Apprentice plan is the trial, and paid plans have a 7-day money-back window.

Which payment methods can I use?

Everything Razorpay offers at checkout: cards, UPI, netbanking and wallets. Auric Artisan never sees your card, UPI or bank details.

Can I pay from outside India?

Yes, in US dollars. Non-Indian cards are accepted; American Express needs a separate permission and may not go through. If a card is declined at the last step, nothing is charged; tell Auric Artisan through the contact page.

Is GST included? Can I get a GST invoice?

The price you see is the total. Auric Artisan is not currently registered for GST, so no GST is added and receipts are payment receipts, not GST invoices.

Do you offer student or nonprofit discounts?

Yes, arranged by hand before you buy. Write through the contact page with proof of eligibility. There is no discount code field.

Can I upgrade or downgrade in the middle of a pass?

An upgrade starts as soon as the payment clears. There is no downgrade to arrange: a pass runs its term and stops. Proration is not automatic; contact Auric Artisan if a change leaves a real difference in your favour.

What happens to my work when my plan ends?

Nothing. Your saved work lives in your browser and stays where it is. Every tool keeps working.

Tokens and credits

What is the difference between tokens and API credits?

Tokens pay for server-backed work you start in a website tool, such as whole-site crawls. API credits pay for calls your own code makes to the REST API. They are separate and never convert. See [Tokens](#).

Do tokens expire?

Included monthly tokens expire at the end of the billing period. The free plan's 100 starter tokens do not expire but do not renew.

Can I buy more tokens?

Not today. Token packs are defined but not on sale; tokens come with a plan.

Can my API usage produce a surprise bill?

No. Overage is off by default and prepaid: it can only spend credits you already bought, and nothing is ever invoiced afterwards. You can also set a monthly spend cap. See [API credits and spend controls](#).

Security and data

Should I turn on two-step verification?

Yes. It is free and takes a minute. See [Two-step verification](#).

How do I see where I am signed in?

Security & Privacy › **Signed-in devices**. You can revoke any device, or sign out everywhere else.

What does the export include?

Your account details, dashboard preferences, and the portfolio draft and library saved in the browser you export from. No passwords, two-step material or API keys. See [Export your data](#).

What happens when I delete my account?

It closes at once and you are signed out everywhere. Personal details are removed; payment records are kept in anonymised form because tax law requires invoices to be retained. Work in your browser is not affected. See [Delete your account](#).

WEBSITE > ACCOUNT AND BILLING

Account and billing: supporting pages

Supporting material for the Auric Artisan account area — glossary, keyboard shortcuts, limits, privacy and related pages.

This folder holds the reference material that supports the task guides in [docs](#): the terms used in the account area, its keyboard shortcuts, every numeric limit in one place, what the account stores and where, and links to related documentation.

Page	What it covers
Glossary	Account, billing and security terms, defined in plain language
Keyboard shortcuts	Keys that work on the sign-in page, the dashboard and the related dialogs
Limits	Every rule, limit, time window and count in the account area, and what the figures mean
Privacy	What the account stores on Auric Artisan's servers, what stays in your browser, and what never leaves
Related	Other documentation, policies and pages connected to the account

WEBSITE > ACCOUNT AND BILLING

Keyboard shortcuts

Keyboard keys that work on the Auric Artisan sign-in page, the account dashboard and the related dialogs.

The account pages can be used entirely from the keyboard. These are the keys with special behaviour; everything else follows normal browser conventions (**Tab** to move, **Enter** or **Space** to press).

Sign-in page

Keys	Where	What it does
Left / Right or Up / Down	Sign In and Create Account tabs	Switch tab
Home / End	The tabs	First or last tab
Enter	Any form field	Submits the form

Dashboard

Keys	Where	What it does
Left / Right	Section rail	Move to the previous or next section
Home / End	Section rail	Jump to Overview or Security & Privacy
Enter or Space	Profile photo strip in Profile	Choose a photo file

Keys	Where	What it does
<code>Esc</code>	Photo viewer	Closes it
<code>Esc</code>	Your account is nearly there panel	Dismisses it for a week

Dialogs

Keys	Where	What it does
<code>Esc</code>	Upgrade dialog	Closes it
<code>Tab</code> / <code>Shift</code> + <code>Tab</code>	Upgrade dialog	Cycle through its buttons without leaving it

Site-wide keys you may use here

Keys	What it does
<code>Ctrl</code> + <code>K</code>	Opens search
<code>?</code>	Opens the guide (when you are not typing in a field)
<code>Ctrl</code> + <code>,</code>	Opens or closes Settings

The full list is in [Keyboard shortcuts](#) in Site features.

WEBSITE > ACCOUNT AND BILLING

Glossary

Plain-language definitions of the account, billing, security and API terms used in the Auric Artisan account area.

Account chip — The photo, first name and plan shown in the site header when you are signed in. Selecting it opens the account menu.

Allowance (included) — The tokens or API credits that come with a plan for each billing month. Included allowances do not roll over.

Annual term — A plan pass bought for twelve months, costing ten times the monthly price.

API credit — The unit that meters REST API calls. One credit is one standard request; heavier endpoints cost more. Separate from tokens.

API key — A secret string that lets your code call the REST API as your account. Shown once when created; begins with `aa_live_`.

Apprentice — The free plan. Every tool, 100 one-time starter tokens, no API access.

Artisan — The paid plan on sale today: ad-free browsing, watermark-free Pro exports, 250 tokens a month and higher limits.

Auric human check — A short test on the sign-in page (repeat a sequence of three marks) that proves a person is signing in. Each proof works once.

Backup code — One of ten single-use codes, in the form `XXXX-XXXX-XXXX-XXXX`, that replaces an authenticator code at sign-in.

Billing period — The month (or the twelve months) a plan pass covers. Monthly allowances refresh at the start of each billing month.

Chargeback — A payment reversed by your bank rather than refunded by Auric Artisan. Shown as a row type in payment history.

Danger zone — The locked panel at the bottom of **Security & Privacy** holding the two irreversible actions: erasing this browser's workspace and deleting the account.

Device code — The short code (`ABCD-EFGH`) the command-line tool shows so you can approve it in a browser.

Device sign-in — Signing in the command-line tool by approving its code in a browser where you are already signed in.

Hard ceiling — A limit of ten times the included API allowance per month, applied to every account whatever its settings.

Industrial Pro — The highest plan: 10,000,000 API credits and 2,500 tokens a month. Marked coming soon.

Invoice — The printable record of one payment, refund or chargeback, opened from **Invoices & Payment History**. Currently a payment receipt, not a GST tax invoice.

Limited workspace — The account before its email address is verified: usable, but with billing, promotions, API keys and device approval locked.

Order reference — The identifier of a purchase, starting with `order_`. Quote it in any payment question.

Overage (paid overage) — Letting API calls continue past the included allowance by spending prepaid credits. Off by default.

Plan pass — A one-time purchase of a paid plan for a fixed term. It does not renew.

Prepaid credits — API credits you have bought. They do not expire at the end of a period.

Proration — Adjusting a price for part of a period. Not automatic on Auric Artisan.

Rate limit — The most API requests allowed per minute: 300 on Specialist, 3,000 on Industrial Pro.

Razorpay — The payment company that processes every payment on Auric Artisan.

Session — One signed-in browser or device. Listed under **Signed-in devices**.

Specialist — The plan that adds the REST API with 1,000,000 credits a month and 1,000 tokens a month. Marked coming soon.

Spend cap — A monthly limit, in US dollars, on how much paid overage can spend.

Starter grant — The 100 tokens the free plan includes once. They do not expire and do not renew.

Token — The unit that meters server-backed work you start in a website tool. Sized at about \$0.10 of work. Separate from API credits.

TOTP — Time-based one-time password: the six-digit codes an authenticator app shows, changing every 30 seconds.

Two-step verification (2FA) — Asking for an authenticator code as well as your password when you sign in.

Username (handle) — Your public name on the site, shown as **@name**. It is the address of your public portfolio and can be used to sign in.

Verification link — The one-time link emailed to prove your address is yours. Valid for 24 hours.

WEBSITE > ACCOUNT AND BILLING

Limits

Every rule, size limit, time window and count in the Auric Artisan account area, and what the dashboard's figures do and do not measure.

All the numbers in the account area in one place. Plan prices and allowances are on [Plans and pricing](#); the pricing page at <https://auricartisan.com/company/pricing/> is authoritative for them.

Identity

Item	Limit
Display name	2–64 characters at sign-up; up to 64 in the profile
Username	3–30 characters; letters, numbers and underscores; reserved words and near-duplicates refused
Username changes	Once every 30 days
Released usernames	Held for 30 days before anyone else can claim them
Bio	Up to 500 characters
Website	Up to 200 characters; an <code>http://</code> or <code>https://</code> address
Location	Up to 120 characters
Profile photo	PNG, JPG or GIF, up to 2 MB before upload; cropped to a square and made smaller before it is saved
Email address	Cannot be changed from the dashboard

Passwords and sign-in

Item	Limit
Password length	12–128 characters
Password content	Upper and lower case, a number, a symbol; no character four times in a row; not a common password
Session with Remember me	Up to 30 days; ends after seven days without use
Session without Remember me	Until the browser closes; 24 hours at most
Second-factor step	10 minutes to enter the code
Human check proof	Single use, tied to the email or username typed; expires after a short countdown
Password reset link	One hour, single use
Verification link	24 hours, single use; a new one replaces the old
Resend wait	60 seconds by default between verification emails

Two-step verification

Item	Limit
Code	Six digits, changing every 30 seconds
Backup codes	Ten, each single use; replaced with a new ten when you set up again

Dashboard

Item	Limit
Danger zone unlock	Five minutes, then it relocks
Sign out everywhere confirmation	About six seconds to press again
Sign-ins shown under See all sign-ins	Up to six
Sign-in summary	The last 30 days
Overview tiles	Up to 12 saved items
Next suggestions	Up to three at a time
Invoices per page	25
Recent credit activity	The last eight movements
Finish setting up panel after dismissal	Returns after a week if something is still missing

API

Item	Limit
API keys per account	10
Key name	Up to 64 characters
Monthly spend cap	\$0 to \$10,000
Hard ceiling	Ten times the plan's included monthly credits
Overage price	\$1.00 (₹85) per 100,000 credits, prepaid
Live feed	The last 100 calls; resets when the API is redeployed

What the figures mean

- **Usage meters** combine the account's own figures with counts recorded in the browser you are using, and show whichever is larger. Daily meters reset each day and monthly meters each calendar month, both in UTC.
- **Projects, Your work** and the library counts come from the library saved in the browser you are using, not from the account.
- **Usage & cost** in the API console measures the current calendar month (UTC) and needs one of your API keys to read the figures.
- **Projected by period end** is a straight-line projection of your pace so far, not a forecast.
- **Where** in the device list is the network address a sign-in came from, not a precise location.
- Browser and system names in the device list are read from what each browser reports, and can be wrong for unusual browsers.
- The token and credit balances shown are the account's records; purchased credits can take a few seconds to appear after payment.

WEBSITE > ACCOUNT AND BILLING

Privacy

What the Auric Artisan account stores on its servers, what stays in your browser, what never reaches Auric Artisan, and how to export or delete it.

This page describes what the account area stores and where. The authoritative documents are the Privacy Policy (<https://auricartisan.com/legal/privacy/>), the Cookie Policy (<https://auricartisan.com/legal/cookies/>) and the Data Retention and Deletion Policy (<https://auricartisan.com/legal/data-retention-and-deletion-policy/>).

Stored with your account

Data	Why
Email address, display name, username	To identify you and sign you in
Bio, website, location, profile photo	What you chose to put on your profile
Password (as a one-way hash only)	To check your password; it cannot be read back
Two-step secret (encrypted) and backup codes	To check your codes
Sessions and sign-in records	To list your devices and protect the account
Dashboard preferences, including the Usage data choice	So they follow you between browsers
Plan, orders and payments	To give you what you paid for and keep receipts
Token and API credit balances and their history	To meter and show your usage
API keys (as a hash and a short prefix only)	To recognise your keys; the full key is shown once
Published portfolio	To serve your public page

Kept in your browser, not the account

- **My Library** — palettes, gradients, collections and exports.
- **Portfolio draft** and its counters (views, downloads, shares).
- **Site preferences** — theme, language, accent colour, text size and other settings.
- **Your cookie choice.**
- **Dismissed dashboard suggestions** and the **Your account is nearly there** dismissal.
- **An API key pasted into Live usage** — kept in that browser tab only, and forgotten when it closes.

Clearing your browser's site data removes these. They do not follow you to another device.

Never reaches Auric Artisan

- Card numbers, UPI IDs and bank credentials. They are entered into Razorpay's checkout and go to Razorpay directly. Auric Artisan keeps only order records: what was bought, the amount and the payment reference.
- Your password in readable form.

Cookies the account uses

The Cookie Policy lists two essential cookies for signed-in use: a session cookie and a cross-site request forgery (CSRF) protection cookie, each lasting up to 30 days or until you sign out. They cannot be switched off, because the account cannot work securely without them.

Exporting and deleting

- **Export** — **Security & Privacy** › **Export everything** downloads your account details, preferences and this browser's library and portfolio draft. See [Export your data](#).
- **Delete** — the danger zone deletes the account. Personal details are removed; payment records are kept in anonymised form for tax law. See [Delete your account](#).
- **Other requests** — access, correction or a fuller copy: use the contact page, topic **Privacy or data**.
