Advertise on Auric Artisan

What advertising on Auric Artisan offers, who it is for, and how to request your first campaign with the Adsense campaign builder.

Adsense is Auric Artisan's own advertising system. It puts your product in front of the designers, developers and colour scientists who use the site, next to the tools and articles they came for. The page at <https://auricartisan.com/advertise/> has everything in one place: the formats and their prices, a live example of each placement, and a six-step campaign builder that shows the full price before you send anything.

Every ad is clearly labelled **Sponsored**. Ads are placed by page context, not by following people across sites: you choose where your campaign runs, and the audience groups you pick guide the creative review only. Every creative that runs is listed publicly in the **Ad Library** at <https://auricartisan.com/advertise/library/>.

Campaigns are booked by request. When you send a campaign from the builder, nothing is booked and nothing is charged. Auric Artisan confirms the campaign and then sends you a Razorpay link to pay the price you were shown. Your campaign runs after payment and creative approval.

Who it is for

- Companies and makers of design, development and colour products.
- Studios, educators and communities that want to reach people who work with colour.
- Anyone launching a product to a design-minded audience.

Where to find it

- The campaign page: <https://auricartisan.com/advertise/>
- The Ad Library: <https://auricartisan.com/advertise/library/>
- Questions about custom flights, bulk buys or studio-made creatives: **Contact us** at <https://auricartisan.com/company/contact/>
- No account is needed to build and send a campaign request.

Quick start

1. Open <https://auricartisan.com/advertise/> and go to **Create your campaign**.
2. **Basics**: name the campaign, add your brand and the address clicks should go to, and choose a goal.
3. **Format**: choose one of the four formats. The goal you chose marks one as **Recommended**.
4. **Creative**: design the ad in the built-in studio, or upload finished artwork.
5. **Audience**: choose where it runs and how often one visitor can see it.
6. **Budget**: choose the flight length, start date, share of voice and currency, and add a promo code if you have one.
7. **Review**: check the summary, add a billing email, accept the policies and select **Request campaign**.

8. Wait for Auric Artisan to confirm and send a Razorpay payment link.

What you can do

- Choose from four formats — Leaderboard, Medium Rectangle, Native In-Feed Card, and Panels & Search Strip — and five zones, from the homepage to the whole site.
 - See a live quote and a delivery estimate that update with every choice.
 - Build the final click address with UTM auto-tagging, custom parameters and tracking macros.
 - Design an accessible creative with a live contrast check, or upload PNG, JPG, WebP or SVG artwork.
 - Pay in Indian rupees or US dollars, with lower daily rates for longer flights.
 - Receive a flight report at the end of the campaign.
 - Browse every ad that runs on Auric Artisan in the Ad Library, and report one that breaks the rules.
-

In this folder

Getting started with advertising

A tour of the Auric Artisan advertise page and how to send your first campaign request.

Before you start

Have these ready:

- The address you want clicks to go to.
- Your brand or company name.
- An email address for receipts and campaign updates.
- Finished artwork, if you have it. If not, you can design the ad on the page.

You do not need an Auric Artisan account.

A tour of the page

<https://auricartisan.com/advertise/> is one long page. A row of links near the top jumps to each part:

Campaign builder, **Live placements**, **Formats**, **Ad Library** and **Policy & measurement**.

- **The introduction** — **Put your work in front of people who build with color.**, with **Create a campaign** and **View live ads**. Figures beside it describe the audience, such as the estimated daily ad views and the number of Learn guides.
- **Engine telemetry** — **this page, right now** — four live counts for the ads on the page you are reading: **units mounted**, **impressions**, **MRC-viewable** and **clicks**. They are measured in your browser, not modelled.
- **See a live placement** — real ad units, served the same way your campaign would be. A unit with no ad to show disappears.
- **Formats & benchmarks** — a table of the four formats with size, position, typical click-through rate, what each is best for and the starting price.
- **Create your campaign** — the six-step builder, with the live quote beside it.
- **The Ad Library** — a preview and a link to every ad that runs on the site.
- **Creative specs** — the size and file guidance for each format, and the rules creatives must follow.
- **Serving policy & measurement** — how ads are served and measured.
- **Questions before you book?** — **Contact us** for custom flights, bulk buys or studio-made creatives.

Send your first request

1. Select **Create a campaign**.
2. In **Basics**, enter a **Campaign name**, your **Brand / company** and the **Destination URL**. Choose a goal under **What should this campaign do?**, for example **Site traffic**. Select **Continue**.
3. In **Format**, keep the **Recommended** format or choose another. Select **Continue**.
4. In **Creative**, type a headline and supporting line in the studio, or choose **Choose a file** to upload artwork. Watch the **Live preview**. Select **Continue**.
5. In **Audience**, choose where the ad runs and the **Frequency cap**. Select **Continue**.
6. In **Budget**, choose a **Flight length**, **Start date** and **Share of voice**. The quote on the side updates as you go. Select **Review campaign**.
7. In **Review**, check the **Campaign summary**, enter your **Billing email** and tick the policy box.
8. Select **Request campaign** in the quote panel. The button shows the total and **(pay on approval)**.

The page confirms: **Request received. We confirm availability and send a Razorpay payment link within 1 business day — your campaign goes live after payment.**

Your draft saves itself in this browser as you work, so you can leave and come back. It is cleared once the request is sent.

Next steps

- [Create a campaign](#) — every step in detail.
- [Pricing and booking](#) — what the quote means and what happens after you send it.
- [Design your creative](#)

[WEBSITE](#) > [ADVERTISE](#)

The Ad Library

How to browse the Auric Artisan Ad Library, read an ad's details, and report an ad that breaks the creative policy.

The Ad Library at <https://auricartisan.com/advertise/library/> lists every ad that runs on Auric Artisan: **Every ad, in the open**. Each entry shows the creative, the advertiser, the format, where it runs, its flight dates and its landing address. There are no hidden ads and no ads shown only to some people.

An ad is listed for its full run and for at least 90 days after it ends. Anyone can open the library; no account is needed.

Browse the library

At the top of the page:

- **Search advertiser or text...** — filters the ads by advertiser, ad text or landing address as you type.
- Format chips — **All formats**, **Leaderboard**, **Rectangle**, **In-feed** and **Strip**.
- Status chips — **All**, **Active** and **Ended**.

The count beside the filters says how many ads match, for example **12 ads**. If none match, the page says **No ads match those filters**.

Read an ad

Each card shows:

Item	Meaning
Creative	The ad exactly as it is served.
Advertiser	Who runs the ad. Auric Artisan's own promotions are marked (house) .

Item	Meaning
Status badge	Active or Ended .
Format	For example Leaderboard · 728×90 .
Runs on	The zones where it appears, such as Homepage or Learn library (113 articles) .
Flight	since and the start date, or the start and end dates.
Landing	Where a click goes. Addresses on Auric Artisan open in the same tab; other sites open in a new tab.
Report this ad	Opens the contact page.

Report an ad

If an ad breaks the creative policy — for example it imitates a button or system dialog, is not labelled **Sponsored**, or misleads — select **Report this ad** on its card, or **Report it** in **About this library**. Both open <https://auricartisan.com/company/contact/>. Auric Artisan pulls violating creatives within one business day.

Who may sell these ads

The file <https://auricartisan.com/ads.txt> declares every authorised seller of Auric Artisan's ad space.

Advertise yourself

Want your brand here? at the foot of the page links to the campaign builder with **Start a campaign** →, and to the contact page with **Talk to us**. See [Create a campaign](#).

WEBSITE > ADVERTISE

Create a campaign

A step-by-step guide to the six-step AdsSense campaign builder on the Auric Artisan advertise page.

The campaign builder is under **Create your campaign** on <https://auricartisan.com/advertise/>. It has six steps: **Basics**, **Format**, **Creative**, **Audience**, **Budget** and **Review**. The quote panel beside it shows the step you are on, for example **Step 2/6**, and updates the price with every choice.

Moving between steps

- **Continue** → checks the current step and moves on. If something is missing, a message under the buttons says what, for example **Add a campaign name to continue**.
- On the fifth step the button reads **Review campaign** →.
- ← **Back** returns to the previous step.
- The numbered step chips at the top open any step you have already reached.

Your draft is saved in this browser automatically, with the note **Draft saved locally**. If you come back later, the builder picks up where you left off. A start date that has passed is moved to tomorrow.

Step 1: Basics

Start with the campaign basics.

Field	What to enter	Limit
Campaign name	A name for your own reference. Only you see it.	2 to 80 characters
Brand / company	Who is running the campaign.	2 to 80 characters
Destination URL	Where every click lands. A bare domain is completed with <code>https://</code> when you leave the field.	Up to 500 characters in the field

Below these, **Destination & tracking** builds the final click address, with auto-tagging, custom parameters and tracking macros. See [Destination and tracking](#).

Then choose a goal under **What should this campaign do?: Brand awareness, Site traffic or Product launch**. Each recommends a format, zone and share of voice, and choosing one applies them. See [Formats and placements](#).

Step 2: Format

Choose how your campaign appears. Four cards show each format with its size, a short description and its **from** price per day. The format your goal recommends has a **Recommended** badge. Select a card to choose it.

Step 3: Creative

Make the creative yours. Choose a **Creative source**:

- **Design it here** — the built-in creative studio.
- **Choose a file** — upload finished artwork.

The **Live preview** shows the result at the exact ratio of your format, with the **Sponsored** label. See [Design your creative](#).

To continue, you need either a studio design or an uploaded file. Otherwise the message is **Choose an artwork file or switch to the creative studio**.

Step 4: Audience

Choose the right context. Auric Artisan places campaigns by page context, not by cross-site profiles.

- **Where it runs** — choose one zone. Each shows its estimated daily views.
- **Creative context (guidance only — never personal tracking)** — choose up to three groups: **Designers, Developers, Color scientists, Educators, Studios & teams**. These guide the creative review. They do not identify or follow individual visitors. Choosing none is shown as **Everyone** in the review.
- **Frequency cap** — how many times one visitor can see your ad in a browsing session: **1 / session** (gentle), **2 / session** (balanced) or **3 / session** (assertive).

Step 5: Budget

Set the flight and budget.

- **Flight length** — **1 week** (standard rate), **2 weeks** (save 5%), **1 month** (save 15%) or **3 months** (save 28%).
- **Start date** — the earliest is tomorrow. Campaigns start at 00:00 IST on the day you choose, after creative approval.
- **Share of voice** — the fraction of eligible ad renders reserved for your campaign: **25% share**, **50% share** or **100% takeover**.
- **Currency** — **INR ₹** or **USD \$**.
- **Promo code** — type a code if you have one. A valid code shows a tick and its offer; an invalid one shows **unknown code**.

See [Pricing and booking](#) for how these change the price.

Step 6: Review

Review and send.

- **Campaign summary** — a thumbnail of the creative and every choice: campaign, brand, objective, format, creative, where it runs, audiences, frequency cap, flight, share of voice, the final destination address, tracking, promo and total.
- **Billing contact** — your **Billing email**. Receipts and campaign updates are sent here.
- Three assurances: **Clearly labelled Sponsored**, **No cross-site tracking** and **Creative reviewed before launch**.
- A checkbox to accept the creative and acceptable-use policy and the refund policy, confirming that your ad will be clearly labelled "Sponsored". The policy names link to <https://auricartisan.com/legal/acceptable-use-policy/> and <https://auricartisan.com/legal/refund/>.

Send the request

The button at the foot of the quote panel reads **Complete campaign to request booking** until every step is complete. Then it reads **Request campaign** with the total, for example **Request campaign — ₹3,493 (pay on approval)**. Select it to send.

- While sending: **Sending booking request...**
- When it arrives: **Request received. We confirm availability and send a Razorpay payment link within 1 business day — your campaign goes live after payment.** A **Campaign submitted** panel shows a reference beginning **REQ-** and a summary of the campaign. Keep the reference.
- If it cannot be sent: **Could not send the request — please email ads@auricartisan.com with your campaign details.**

Sending books nothing and charges nothing. See [Pricing and booking](#) for what happens next.

[WEBSITE](#) > [ADVERTISE](#)

Design your creative

How to design an ad in the Adsense creative studio or upload finished artwork, the specifications for each format, and the creative policy.

The third step of the campaign builder, **Creative**, is where you make the ad itself. Under **Creative source**, choose **Design it here** to use the built-in creative studio, or **Choose a file** to upload finished artwork. The **Live preview** always shows your creative at the exact ratio of the format you chose, for example **728×90 · Leaderboard**, with the **Sponsored** label.

Design it in the studio

The studio renders your text and colours as a crisp vector image at the exact size of your format.

Field	What it is	Limit	If left empty
Headline	The main line.	40 characters	Your brand name
Supporting line	One clear reason to click.	60 characters	"Reach people who work in color"
Call to action	The button text.	20 characters	"LEARN MORE"
Creative description	A description of the visual for screen readers.	120 characters	A description made from your brand name
Background	The background colour.	Colour picker	#FFF8EC
Accent	The colour of the border, the side bar or mark, and the button.	Colour picker	#D3AF37
Text	The colour of the headline and supporting line.	Colour picker	#1F2937

The button text is set in dark or white automatically, to stand out on the accent colour.

The contrast check

Under the colours, a line checks the headline against the background, for example **Headline contrast 13.90:1 — passes WCAG AA ✓** with the default colours. Below 4.5:1 it reads **below WCAG AA, consider darker text**. The check is advice; it does not stop you continuing.

The layout for each format

- **Leaderboard**: an accent bar on the left, the headline and supporting line beside it, and the call-to-action button on the right.
- **Panels & Search Strip**: an accent bar, the headline and supporting line, and an accent dot on the right.
- **Medium Rectangle** and **Native In-Feed Card**: a centred accent mark, headline, supporting line and button.

Every studio design has a thin accent border and a small **AD** mark in the top-right corner. If you change format, the design is redrawn at the new size.

Upload finished artwork

1. Select **Choose a file**.
2. Drop your artwork on **Drop your artwork here**, or select it to choose a file from your device.
3. The file card shows the name, the pixel size and the file size. **Remove** clears it.

Rule	Detail
File types	PNG, JPG, WebP or SVG
Largest file	300 KB
Recommended size	The size of your format, shown as Recommended size for this format

If the artwork matches the format's shape, the page says **Ready to use · matches the 728×90 format**. (with your format's size). If not, it says the artwork **will be cropped** to the format's size, and suggests uploading the recommended ratio for the sharpest result. A ratio within about 3% of the format counts as a match.

Specifications for each format

The **Creative specs** section of the advertise page gives this guidance:

Format	Artwork	Notes
Leaderboard	728×90; SVG, or PNG or WebP at 2×; under 150 KB	Runs in-content on articles, tools and hubs.
Medium Rectangle	300×250; SVG, or PNG or WebP at 2×; under 150 KB	The highest-engagement display unit.

Format	Artwork	Notes
Native In-Feed Card	Card artwork 720×600, a title of up to 60 characters and a category line	Sits inside the content grids.
Panels & Search Strip	320×100	Shows inside the site kits, Spotlight and search results.

"At 2×" means twice the listed pixel size, for sharp display on high-density screens.

The creative policy

Every creative is reviewed before launch. The advertise page states the rules:

- Creatives are clearly labelled **Sponsored**.
- They never imitate the site's interface. Creatives that pretend to be buttons or system dialogs are rejected.
- They never auto-play sound.
- They never track visitors across sites.

When you send the request, you also accept the creative and acceptable-use policy at

<https://auricartisan.com/legal/acceptable-use-policy/>.

Accessibility tips

- Aim for a headline contrast of at least 4.5:1; the studio's check tells you where you stand.
- Always fill in **Creative description**, so screen-reader users know what the ad shows.
- Keep the call to action short and specific.

WEBSITE > ADVERTISE

Destination and tracking

How to set the destination address of an Auric Artisan ad campaign, with UTM auto-tagging, custom URL parameters and tracking macros.

The **Destination URL** in the first step is where every click on your ad lands. Below it, **Destination & tracking** builds the full address that clicks will actually use, called the **Final URL**.

The destination address

- Type the address of your landing page. If you type a bare domain such as **your-product.com**, it becomes **https://your-product.com** when you leave the field.
- **Display link** shows the short form of the address that goes with the ad: the site and the start of the path.

- **Test link** ↗ opens the final address with sample values in place of the macros, so you can check it loads. It appears once the address is valid.

What the builder checks

Message	Meaning
Enter a destination URL.	The field is empty.
That doesn't parse as a complete URL — include https://.	The address is incomplete.
Only http(s) destinations can be served.	The address uses another scheme.
Credentials inside the URL are not allowed.	The address contains a user name or password.
That hostname doesn't look reachable.	The site name is not a full domain.

These stop you continuing. Two warnings let you continue:

- **Not secure (http) — browsers may warn your visitors. Prefer https.**
- **Link shorteners hide the real destination from the Ad Library — use the final URL.** This appears for common shorteners such as bit.ly and tinyurl.com.

When all is well, the status reads **Looks good — clicks go straight to this URL.**, or **Looks good** — followed by how many tracking parameters **will ride along on every click.**

Auto-tagging

Auto-tagging adds UTM parameters to the final address, so visits from the campaign show up attributed in your analytics. It is on by default. Untick it to send clicks to the address exactly as you typed it, plus any custom parameters.

Parameter	Default
utm_source	auricartisan
utm_medium	adssense
utm_campaign	Made from your campaign name, for example summer-product-launch
utm_content	{placement}
utm_term	{zone}

Edit any value, up to 60 characters. An empty value is left out. Leave **utm_campaign** empty to keep it following the campaign name.

Custom URL parameters

Select + **Add parameter** to add your own name and value, up to five parameters.

- A name can use letters, numbers, dots, dashes and underscores, up to 32 characters. Otherwise the builder says **Custom parameter names can only use letters, numbers, dot, dash and underscore.**
- A value can be up to 200 characters and can include macros.
- A parameter with the same name as a UTM parameter replaces it.
- Parameters already in your destination address are kept.
- Select ✕ to remove a parameter.

Tracking macros

Macros are placeholders that are filled in each time the ad is shown. Select a macro chip to insert it where your cursor was in the tracking fields.

Macro	Replaced with
{placement}	The unit that served the click: leader , rect , strip or infeed .
{zone}	The zone this campaign runs on.
{campaign}	Your campaign's order ID.
{clickid}	A unique ID for each ad shown, for attribution.

The final URL

Final URL shows the complete address, with the macros still in braces. This is the address that appears as **Destination** in the review step and in your booking request.

For example, with the defaults, a destination of **https://your-product.com/** and the campaign name "Summer product launch", the final URL is:

```
https://your-product.com/?utm_source=auricartisan&utm_medium=adssense&utm_campaign=summer-product-launch&utm_content={placement}&utm_term={zone}
```

WEBSITE > ADVERTISE

Formats and placements

The four ad formats on Auric Artisan, the five zones a campaign can run in, their sizes, benchmarks and starting prices.

A campaign has one format and runs in one zone. The format is the shape of the ad; the zone is the part of the site it appears on.

The four formats

Format	Size	Position	Typical CTR	Best for	From
Leaderboard	728×90	In-content, all page types	~0.4%	Awareness at scale	₹399/day
Medium Rectangle	300×250	Inline with articles	~0.7%	Consideration	₹499/day
Native In-Feed Card	Card	Inside tool and article grids	~1.2%	Traffic and launches	₹649/day
Panels & Search Strip	320×100	Kits, Spotlight, search	~0.5%	Power-user reach	₹299/day

In US dollars the starting prices are \$5, \$6, \$8 and \$4 a day. Select **USD \$** in the builder to see every price in dollars.

The click-through rates are house averages measured by the ad system. Your flight report shows your own numbers.

Leaderboard

A wide banner in the content of articles, tools and hub pages. The page calls it the workhorse unit.

Medium Rectangle

A 300×250 unit inline with content, and the page's highest-engagement display unit.

Native In-Feed Card

A sponsored card that sits inside the tool and article grids, with a native look. Card artwork is 720×600.

Panels & Search Strip

A compact 320×100 strip inside the site's kits, in Spotlight (**Ctrl** + **K**) and in search results.

The five zones

Choose the zone in the **Audience** step, under **Where it runs**. Each shows its estimated daily views.

Zone	Estimated views
Homepage	~1,400 a day
Learn library (113 articles)	~2,600 a day
Tools & workspaces	~1,900 a day
Collections · Blog · Docs	~1,100 a day
Run of site (everywhere)	~7,000 a day

The zone changes both the price and the delivery estimate. See [Pricing and booking](#).

Goals and recommendations

The first step asks **What should this campaign do?** Each goal recommends a format, a zone and a share of voice. Choosing a goal applies them, and you can change any of them afterwards.

Goal	Description	Recommends
Brand awareness	Be seen everywhere color work happens.	Leaderboard, Run of site, 50% share
Site traffic	Native cards that earn real clicks.	Native In-Feed Card, Learn library, 50% share
Product launch	Own the homepage for launch week.	Medium Rectangle, Homepage, 100% takeover

In the **Format** step, the recommended format carries a **Recommended** badge. You can change format later without losing the rest of your draft.

How ads are shown

- Every format is clearly labelled **Sponsored**.
- Ad units render only as they come near the part of the page on screen.
- Viewability is measured to the MRC standard: at least 50% of the ad visible for one second.
- A frequency cap limits how often one visitor sees your ad in a browsing session.
- A slot with no ad to fill it disappears from the page.
- Paid Auric Artisan subscribers browse without ads, so they do not see your campaign.
- No third-party ad technology runs unless a visitor accepts the marketing cookie category.

The **See a live placement** section of <https://auricartisan.com/advertise/> shows real units served this way.

WEBSITE > ADVERTISE

Pricing and booking

How the AdsSense live quote is worked out, the discounts and promo codes, currencies, what happens after you send a request, payment, refunds and the flight report.

The live quote

Beside the campaign builder, the **Live estimate** panel prices your campaign as you build it. Every choice updates it at once, and the price shown is the price you are asked to pay.

Your campaign shows:

Line	Meaning
Summary	Format, zone, days and share, for example Leaderboard · Run of site (everywhere) · 30 days @ 50% .
Base run	The price before discounts.
Flight discount	The saving for a longer flight. Shown only when there is one.
Promo	The promo code saving, with the code. Shown only when there is one.
Tax	Shown only when tax applies.
Total	What you pay.

Estimated delivery shows:

Figure	Meaning
impressions	How many times the ad is expected to be shown: the zone's daily views, times the days, times your share of voice.
est. uniques	Roughly how many different people see it.
est. clicks	Impressions times the format's typical click-through rate.
eff. CPM	The effective price per thousand impressions, before tax.

These are estimates. Your flight report shows what was actually delivered.

What changes the price

- **Format:** each has a daily rate, from ₹299 (\$4) to ₹649 (\$8) a day. See [Formats and placements](#).
- **Zone:** busier zones cost more a day. **Run of site (everywhere)** costs the most and reaches the most views.
- **Flight length:** longer flights have a lower daily rate. **1 week** is the standard rate; **2 weeks** save 5%, **1 month** saves 15% and **3 months** save 28%.
- **Share of voice:** **25% share**, **50% share** or **100% takeover** of the eligible ad renders in your zone. A larger share costs more and delivers more impressions.
- **Promo code:** a valid code takes a percentage off the total after the flight discount.
- **Currency:** **INR ₹** or **USD \$**. Each currency has its own rates.

Example quotes

These are what the page quotes for the choices shown, in rupees:

Campaign	Base run	Flight discount	Total	Est. impressions
Medium Rectangle, Homepage, 1 week, 100% takeover	₹3,493	—	₹3,493	9,800
Leaderboard, Run of site, 1 month, 50% share	₹10,533.60	₹1,580.04	₹8,953.56	105,000

Campaign	Base run	Flight discount	Total	Est. impressions
Native In-Feed Card, Learn library, 1 month, 50% share	₹12,314.78	₹1,847.22	₹10,467.56	39,000

The second campaign in US dollars is \$112.20. Build your own campaign on the page for an exact quote.

Send the request

The button at the foot of the quote panel reads **Request campaign** with the total and **(pay on approval)** once every step is complete. The note under it reads **Nothing is charged here · we confirm the campaign, then send a Razorpay link for the price shown.**

Sending the request books nothing and charges nothing.

What happens next

1. **Confirmation.** Auric Artisan confirms availability and sends a Razorpay payment link to your billing email within one business day.
2. **Payment.** You pay the price shown in your quote through the Razorpay link.
3. **Creative review.** Before launch, your creative and destination are reviewed for policy compliance.
4. **Launch.** The campaign starts at 00:00 IST on your start date, after creative approval, and runs for the flight you chose.
5. **Transparency.** While it runs, the campaign is listed in the [Ad Library](#).
6. **Flight report.** At the end, you receive a report of impressions, MRC-viewable impressions, clicks and effective CPM, measured by the ad system rather than estimated.

The request carries your campaign details as text: the campaign and brand names, format, zone, dates, share of voice, goal, frequency cap, audiences, final destination address, quoted total and estimated impressions. Your artwork is not attached to the request, so keep your file, or your studio settings, ready for when Auric Artisan replies.

Refunds

From the refund policy at <https://auricartisan.com/legal/refund/>:

- An advertising booking is refundable in full at any time before the campaign start date.
- Once a campaign has started, refunds for the remaining, undelivered part are handled case by case, based on the booking terms shown at purchase.

Talk to a person

For custom flights, bulk buys or a creative made by the Auric Artisan studio, use **Contact us** at <https://auricartisan.com/company/contact/>.

Advertise reference

Every control, option, price, limit and message in the AdsSense campaign builder and the Ad Library.

Formats

Format	Size	INR a day	USD a day	Typical CTR
Leaderboard	728×90	₹399	\$5	~0.4%
Medium Rectangle	300×250	₹499	\$6	~0.7%
Native In-Feed Card	Card, artwork 720×600	₹649	\$8	~1.2%
Panels & Search Strip	320×100	₹299	\$4	~0.5%

The daily prices are the "from" prices; the zone, flight and share change the total.

Zones

Zone	Estimated views a day
Homepage	~1,400
Learn library (113 articles)	~2,600
Tools & workspaces	~1,900
Collections · Blog · Docs	~1,100
Run of site (everywhere)	~7,000

Step 1: Basics

Control	What it does	Values or range	Default
Campaign name	Your own name for the campaign.	2 to 80 characters	Empty
Brand / company	Who runs the campaign; also the studio's fallback headline.	2 to 80 characters	Empty
Destination URL	Where clicks land.	http or https; the field takes up to 500 characters	Empty
Display link	Short form of the destination.	—	—
Test link ↗	Opens the final address with sample macro values.	—	—
Auto-tagging	Adds UTM parameters.	On, off	On

Control	What it does	Values or range	Default
<code>utm_source</code> ... <code>utm_term</code>	UTM values.	Up to 60 characters each	See below
+ Add parameter	Adds a custom parameter.	Up to 5; name up to 32, value up to 200 characters	None
Macro chips	Insert a macro in the last-used tracking field.	<code>{placement}</code> , <code>{zone}</code> , <code>{campaign}</code> , <code>{clickid}</code>	—
Final URL	The complete click address.	—	—
What should this campaign do?	Sets a goal and applies its recommendations.	Brand awareness, Site traffic, Product launch	Brand awareness

Default UTM values: `utm_source=auricartisan`, `utm_medium=adssense`, `utm_campaign` from the campaign name, `utm_content={placement}`, `utm_term={zone}`.

Step 2: Format

Control	What it does	Values	Default
Format cards	Choose the format.	The four formats	Leaderboard
Recommended badge	Marks the format your goal recommends.	—	—

Step 3: Creative

Control	What it does	Values or range	Default
Creative source	Studio or upload.	Design it here, Choose a file	Design it here
Headline	Main line.	Up to 40 characters	Brand name
Supporting line	Second line.	Up to 60 characters	"Reach people who work in color"
Call to action	Button text.	Up to 20 characters	"LEARN MORE"
Creative description	Screen-reader description.	Up to 120 characters	Made from the brand name
Background	Background colour.	Any colour	#FFF8EC
Accent	Border, mark and button colour.	Any colour	#D3AF37
Text	Text colour.	Any colour	#1F2937
Upload area	Takes artwork.	PNG, JPG, WebP, SVG; up to 300 KB	—
Remove	Clears the uploaded file.	—	—

Control	What it does	Values or range	Default
Live preview	Shows the creative at the format's ratio.	—	—

Step 4: Audience

Control	What it does	Values	Default
Where it runs	Chooses the zone.	The five zones	Run of site (everywhere)
Creative context	Guides the creative review.	Up to 3 of Designers, Developers, Color scientists, Educators, Studios & teams	None (Everyone)
Frequency cap	Most views per visitor per session.	1 / session, 2 / session, 3 / session	2 / session

Step 5: Budget

Control	What it does	Values	Default
Flight length	How long it runs.	1 week, 2 weeks (save 5%), 1 month (save 15%), 3 months (save 28%)	1 month
Start date	First day, from 00:00 IST, after creative approval.	Tomorrow or later	Tomorrow
Share of voice	Share of eligible renders reserved.	25% share, 50% share, 100% takeover	50% share
Currency	Currency of the quote.	INR ₹, USD \$	INR ₹
Promo code	Applies a discount.	Up to 24 characters	Empty

Step 6: Review

Control	What it does	Values	Default
Campaign summary	Every choice and the total.	—	—
Billing email	Where receipts and updates go.	A valid email address	Empty
Policy checkbox	Accepts the creative and acceptable-use policy and the refund policy.	Ticked, unticked	Unticked

Quote panel

Item	Meaning
Step N/6	The current step.
Base run, Flight discount, Promo, Tax, Total	The price lines. Discount, promo and tax lines show only when they apply.
impressions, est. uniques, est. clicks, eff. CPM	The delivery estimate.
Complete campaign to request booking	The button before every step is complete.
Request campaign — total (pay on approval)	Sends the booking request.

Messages

Message	When
Add a campaign name to continue.	Campaign name under 2 characters.
Add the brand or company running this campaign.	Brand under 2 characters.
Enter a destination URL.	Destination empty.
That doesn't parse as a complete URL — include https://.	Destination incomplete.
Only http(s) destinations can be served.	Another scheme.
Credentials inside the URL are not allowed.	User name or password in the address.
That hostname doesn't look reachable.	Not a full domain.
Not secure (http) — browsers may warn your visitors. Prefer https.	Warning for http.
Link shorteners hide the real destination from the Ad Library — use the final URL.	Warning for a shortener.
Custom parameter names can only use letters, numbers, dot, dash and underscore.	Bad parameter name.
Choose an artwork file or switch to the creative studio.	Upload chosen, no file.
Choose a PNG, JPG, WebP or SVG image.	Wrong file type.
That file is over 300 KB — please compress it.	File too large.
That file could not be read as an image.	Damaged or unreadable file.
Artwork removed. Choose a new file to continue.	After Remove .
Choose a valid campaign start date.	Start date missing or in the past.
Enter a valid billing email.	Billing email not valid.

Message	When
Accept the creative and refund policies before checkout.	Policy box unticked.
unknown code	Promo code not recognised.
Sending booking request...	Request on its way.
Request received. We confirm availability and send a Razorpay payment link within 1 business day — your campaign goes live after payment.	Request sent.
Could not send the request — please email ads@auricartisan.com with your campaign details.	Request failed.

Ad Library controls

Control	What it does	Values	Default
Search advertiser or text...	Filters by advertiser, text or landing address.	Any text	Empty
Format chips	Filter by format.	All formats, Leaderboard, Rectangle, In-feed, Strip	All formats
Status chips	Filter by status.	All, Active, Ended	All
Report this ad	Opens the contact page.	—	—

WEBSITE > ADVERTISE

Troubleshooting

Symptoms, causes and fixes for problems with the Adsense campaign builder, booking requests and the Ad Library.

Continue does nothing

Why: Something in the current step is missing or not valid. The message under the buttons says what.

What to do: Read the message and fix that field. In the first step, fields with a problem are also marked. See the messages in the [Reference](#).

I cannot open a later step from the step chips

Why: The chips open only steps you have already reached with **Continue**.

What to do: Work through the steps in order once. After that you can jump between them.

The destination address is rejected

Why: It is incomplete, uses a scheme other than http or https, contains a user name or password, or its site name is not a full domain.

What to do: Paste the full address from your browser's address bar, starting `https://`. Use the final address, not a link shortener.

My uploaded file is rejected

Why: The file is not PNG, JPG, WebP or SVG, is over 300 KB, or cannot be read as an image.

What to do: Export the artwork again in one of the four types and compress it under 300 KB. The **Creative specs** section suggests under 150 KB for the Leaderboard and Medium Rectangle.

The preview crops my artwork

Why: The artwork's shape does not match the format.

What to do: Upload artwork at the recommended size for your format, shown under the upload area: 728×90, 300×250, 320×100, or 720×600 for the in-feed card.

The studio says "below WCAG AA"

Why: The headline colour and background have less than 4.5:1 contrast.

What to do: Choose a darker **Text** colour or a lighter **Background**, or the other way round. You can continue anyway, but a readable ad performs better and is fairer to readers.

The start date will not go earlier

Why: The earliest start date is tomorrow.

What to do: Choose tomorrow or later. The campaign starts at 00:00 IST on that day, after creative approval.

My promo code shows "unknown code"

Why: The code is not recognised.

What to do: Check the spelling; codes are not case-sensitive. The quote shows a **Promo** line only when a code is valid.

The request button stays on "Complete campaign to request booking"

Why: One of the steps is incomplete: usually the billing email or the policy checkbox in **Review**.

What to do: Go to the **Review** step. Enter a valid **Billing email**, tick the policy box, and check the earlier steps: each needs a campaign name, brand, valid destination, creative and start date.

"Could not send the request"

Why: The request did not reach Auric Artisan.

What to do: Try again. If it still fails, email ads@auricartisan.com with your campaign details, as the message says. Your draft stays in this browser until a request is sent.

The confirmation says "Payment verified", but I have not paid

Why: The **Campaign submitted** panel uses the same wording for every campaign. For a booking request, nothing has been charged. The reference beginning **REQ-** identifies your request, and the **Payment** line stays empty.

What to do: Keep the reference and wait for the Razorpay payment link at your billing email, within one business day.

I have not received the payment link

Why: Confirmation can take up to one business day, or the email may have been filtered.

What to do: Check your spam folder for the billing email you entered. After one business day, use **Contact us** at <https://auricartisan.com/company/contact/> and quote your **REQ-** reference.

My draft has gone

Why: Drafts are saved in the browser you used. Another browser or device, a private window, or clearing site data starts a new draft. A draft is also cleared once its request is sent.

What to do: Build the campaign again. Keep your artwork file to hand.

My campaign is not in the Ad Library

Why: Campaigns appear in the Ad Library while they run, after confirmation, payment and creative approval.

What to do: Check again after your start date.

Advertise FAQ

Short answers to common questions about advertising on Auric Artisan.

Do I pay when I send the campaign?

No. Sending books nothing and charges nothing. Auric Artisan confirms the campaign and sends a Razorpay link for the price you were shown.

How soon can my campaign start?

The earliest start date is tomorrow. A campaign starts at 00:00 IST on its start date, after payment and creative approval. The confirmation and payment link arrive within one business day of your request.

Do I need an account?

No. You need a billing email for receipts and campaign updates.

Which currencies can I pay in?

Indian rupees or US dollars. Choose in the **Budget** step.

Is tax included?

The quote shows a **Tax** line when tax applies. The **Total** is the price you are asked to pay.

Can I target individual people?

No. Campaigns are placed by page context: you choose the zone. The audience groups you choose guide the creative review only; they do not identify or follow visitors.

Do my ads track visitors?

No. Ads never track visitors across sites. Third-party ad technology runs only for visitors who accept the marketing cookie category.

How is my campaign measured?

Impressions, MRC-viewable impressions (at least half the ad visible for one second), clicks and effective CPM. You receive them in a flight report at the end of the campaign.

Who sees my ad?

Visitors to the zone you chose, up to your frequency cap per session. Paid Auric Artisan subscribers browse without ads.

What is share of voice?

The fraction of eligible ad renders in your zone that are reserved for your campaign: 25%, 50% or 100%.

Can I change the format after designing the creative?

Yes. A studio design is redrawn at the new size. An uploaded file may be cropped to the new shape; upload artwork at the new size for the sharpest result.

Can Auric Artisan make the creative for me?

Ask through **Contact us** at <https://auricartisan.com/company/contact/>, which the advertise page offers for studio-made creatives, custom flights and bulk buys.

Can I get a refund?

Yes, in full, at any time before the campaign start date. After it starts, refunds for the undelivered part are handled case by case. See <https://auricartisan.com/legal/refund/>.

Is my ad listed publicly?

Yes. Every ad that runs is listed in the [Ad Library](#) for its full run and at least 90 days after.

What gets an ad rejected?

Ads that imitate the site's interface, such as fake buttons or system dialogs, that auto-play sound, or that track visitors across sites. Every ad must be labelled **Sponsored**. See [Design your creative](#).

Advertise glossary

Advertising terms used on the Auric Artisan advertise page and in the Ad Library.

Term	Meaning
Ad Library	The public list of every ad that runs on Auric Artisan.
ads.txt	A public file that declares who may sell a site's ad space.
AdsSense	Auric Artisan's own advertising system.
Auto-tagging	Adding UTM parameters to the click address automatically.
Booking request	A campaign sent from the builder. It books and charges nothing until confirmed and paid.
Call to action	The button text on an ad, such as "LEARN MORE".
Campaign	One ad in one format and zone, for one flight.
Creative	The ad itself: the artwork people see.
CTR (click-through rate)	Clicks divided by impressions.
Destination URL	The page a click on the ad opens.
Display link	The short form of the destination shown with the ad.
eff. CPM	Effective cost per thousand impressions: the price divided by estimated impressions, times 1,000.
Final URL	The destination with tracking parameters added.
Flight	The period a campaign runs, from its start date.
Flight report	The report of delivered impressions, viewable impressions, clicks and effective CPM at the end of a campaign.

Term	Meaning
Format	The shape of an ad: Leaderboard, Medium Rectangle, Native In-Feed Card, or Panels & Search Strip.
Frequency cap	The most times one visitor can see your ad in a browsing session.
House ad	An ad for Auric Artisan's own products, marked "(house)" in the Ad Library.
Impression	One showing of an ad.
Macro	A placeholder in the click address, such as <code>{zone}</code> , filled in each time the ad is shown.
MRC-viewable	Counted as seen: at least 50% of the ad visible for one second.
Share of voice	The fraction of eligible ad renders in a zone reserved for your campaign.
Sponsored	The label every ad on Auric Artisan carries.
Takeover	A 100% share of voice.
UTM parameters	Standard tags such as <code>utm_source</code> that analytics tools use to attribute visits.
Zone	The part of the site a campaign runs on, such as the Homepage or Run of site.

WEBSITE > ADVERTISE

Limits and accuracy

What the AdsSense price and delivery estimates are based on, how accurate they are, and the limits of the campaign builder.

The price

The quote in the builder is the price you are asked to pay. It is worked out from the format's daily rate, the zone, the flight length, the share of voice and any promo code, in the currency you chose. The payment link is for the price shown.

The delivery estimate

- **Impressions** are estimated from each zone's typical daily views, shown on the zone buttons, multiplied by the days in the flight and your share of voice. Real traffic varies from day to day.
- **Unique viewers** are a rough estimate from impressions.
- **Clicks** use each format's typical click-through rate: house averages measured by the ad system, not a promise for your ad.
- **eff. CPM** divides the price before tax by the estimated impressions.
- The figures on the page, such as estimated daily ad views, are the page's own estimates.

Your flight report gives the delivered figures, measured by the ad system rather than estimated.

What reduces delivery

- Paid Auric Artisan subscribers browse without ads.
- Your frequency cap limits how often one visitor sees the ad.
- Ad units render only as they come near the part of the page on screen, so a unit far down a page a visitor never scrolls to is not shown.

Builder limits

Item	Limit
Formats per campaign	1
Zones per campaign	1
Audience groups	Up to 3
Custom URL parameters	Up to 5
Uploaded artwork	PNG, JPG, WebP or SVG; up to 300 KB
Earliest start date	Tomorrow
Flight lengths	1 week, 2 weeks, 1 month, 3 months
Currencies	INR, USD

For anything outside these, such as several formats, a custom flight length or a bulk buy, use **Contact us** at <https://auricartisan.com/company/contact/>.

Drafts

A draft is saved only in the browser where you build it, including an uploaded file. It does not follow you to another browser or device.

WEBSITE > **ADVERTISE**

Privacy

What you share when you request an Auric Artisan ad campaign, what stays in your browser, and what ads do and do not track about visitors.

For advertisers

What you send

When you select **Request campaign**, Auric Artisan receives:

- Your brand or company name and your billing email.
- The campaign details: campaign name, goal, format, zone, flight, start date, share of voice, frequency cap, audience groups, final destination address, quoted total and estimated impressions.

Your billing email is used for receipts and campaign updates.

What stays in your browser

Your draft, including any uploaded artwork, is saved in this browser while you build, so you can return to it. It is cleared when you send the request. To discard a draft without sending, clear this site's data in your browser.

Payment

Payment is made through a Razorpay link that Auric Artisan sends after confirming your campaign. Card and bank details are handled by Razorpay.

What becomes public

While your campaign runs, the [Ad Library](#) lists your creative, your brand as the advertiser, the format, the zones, the flight dates and the landing address, for the full run and at least 90 days after. Your campaign name, billing email and price are not listed.

For visitors who see ads

- Every ad is labelled **Sponsored**.
- Campaigns are placed by page context. The audience groups advertisers choose guide the creative review and do not identify or follow individual visitors.
- Ads never track visitors across sites.
- No third-party ad technology runs unless a visitor accepts the marketing cookie category. Cookie choices are covered in [Company and legal](#).
- The ad system counts impressions, viewable impressions and clicks to produce flight reports and to apply frequency caps.
- Paid Auric Artisan subscribers browse without ads.
