Company and legal

Plain-language summaries of Auric Artisan's company pages and legal policies, each linked to the official page that governs.

Auric Artisan publishes a set of company pages — About, Contact, FAQ, Timeline, Accessibility, the author page, Pricing and a Security page — and twelve legal documents, from the Terms of Service to the Transparency and Ethics Policy. This folder summarises each of them in plain language so you can find what matters to you quickly.

The official pages are authoritative. These summaries are written to help you understand the documents, not to replace them. They add no obligations and remove none. Where a summary and the official page differ, the official page wins; each summary links to its source, and names the version and date it was written from.

Some pages on the site describe the same thing slightly differently, because they were updated at different times. Where that matters to you — for example, which address to send a security report to — the summary points it out and names the more specific or more recent page.

Who it is for

- Anyone deciding whether to use Auric Artisan, create an account or buy a plan.
- People who want to know what happens to their data.
- Researchers reporting a security issue.
- Anyone who needs to cite or check a policy.

Where to find the official pages

Group	Address
All legal documents	https://auricartisan.com/legal/
Company pages	Under Company in the site header, for example https://auricartisan.com/company/about/
Security page	https://auricartisan.com/security/

Quick start

1. Open <https://auricartisan.com/legal/> to see every policy, with its effective date and version.
2. Select a policy. Each opens with **Key Points** and an **On this page** list.
3. Select a numbered section heading to expand or collapse it.
4. For a plain-language version, open the matching summary in this folder.
5. For anything the policies do not answer, use <https://auricartisan.com/company/contact/>.

What you can do with this folder

- Find out, in a few minutes, what each policy says and who it applies to.
- See the refund, billing, privacy and deletion rules that affect your account.
- Learn how to contact the right inbox, report a vulnerability or request your data.
- Check what Auric Artisan says it does not claim — certifications, audits, medical use.

- [Related](#) — where each policy connects to the product documentation

WEBSITE > COMPANY AND LEGAL

Company and legal docs

The list of plain-language summaries of Auric Artisan's company pages and legal policies.

One page per official document. Each summary names the official address, the version and date it was written from, and restates the document's key points and sections in plain language. The official page is always authoritative.

How to read the policies

Find a policy, read its effective date and version, navigate its sections, and use the plain-language summaries in these docs.

Find a policy

1. Open <https://auricartisan.com/legal/> (**Legal & Policies**).
2. Each card names a document and describes it in one line. Select one to open it.

The same index links to the Platform FAQ. Company pages — About, Timeline, Pricing, Accessibility, FAQ and Contact — are in the **Company** menu in the site header.

The parts of a policy page

Part	What it tells you
Auric Artisan · Legal and the title	Which document you are reading
Effective	The date the document took effect
Last updated	The date of the latest change
Version	The document's version number
Reading time	An estimate
← All Policies	Back to the index
Key Points	The document in a few bullets
On this page	Links to each numbered section
Numbered sections	Select a heading to expand or collapse it

Part	What it tells you
Plain language; Current status; Important: notes	Short explanations inside a section
Related Policies	Links to connected documents

Versions these summaries were written from

Written on the date at the top of this page. If a policy's **Last updated** date is newer than the one below, read the official page for the changes.

Document	Effective	Last updated	Version
Terms of Service	27 April 2026	12 August 2026	2.4
Privacy Policy	27 April 2026	27 July 2026	2.3
Cookie Policy	27 April 2026	23 May 2026	1.2
Acceptable Use Policy	27 April 2026	23 May 2026	2.2
Content and Intellectual Property Policy	27 April 2026	23 May 2026	2.2
Data Retention and Deletion Policy	27 April 2026	23 May 2026	2.2
Browser Extension Privacy Policy	27 July 2026	27 July 2026	1.0
License Agreement	27 April 2026	23 May 2026	2.2
Refund Policy	16 August 2026	16 August 2026	4.0
Security Policy	27 April 2026	23 May 2026	2.2
Subscription and Billing Policy	16 August 2026	16 August 2026	2.4
Transparency and Ethics Policy	27 April 2026	23 May 2026	2.2

Company pages carry a **Last updated** date too: About and FAQ (27 July 2026), Accessibility statement (23 May 2026), Security page (23 May 2026, version 2.1).

Things that apply to every policy

- **Governing law.** The Terms of Service are governed by the laws of India.
- **Changes.** Each policy says it may be updated, and that continuing to use the platform after an update means accepting it. Check the **Last updated** date.
- **One agreement.** The Terms say they, together with the Privacy Policy, Acceptable Use Policy, Content and IP Policy and the other referenced policies, form the agreement between you and Auric Artisan.
- **Current status notes.** Several older policies describe features "where enabled" or "if introduced". The newer billing, refund and terms documents describe what is actually live: accounts, and one-time purchases through Razorpay.

How to use the summaries

- Read the summary to understand what a document covers and where to look.
- Read the official section before relying on a detail, especially for money, refunds or legal rights.
- Where two official pages say different things, the summary says so and names both. The more specific or more recent page is usually the one to follow; if in doubt, ask through the contact page.

About Auric Artisan

A plain-language summary of Auric Artisan's About page — what the platform provides, its colour science, vision models, web analysis, theme generation, principles and independence.

Official page: <https://auricartisan.com/company/about/> (last updated 27 July 2026). The official page is authoritative; this is a summary to help you find your way.

At a glance

- A platform for colour tools, colour-science resources, articles and structured learning material.
- Web analysis across security, performance, responsive design, palette extraction and related checks.
- Theme generation for colour systems, interfaces and web design.
- CIE colour science: XYZ, Lab, LCH, Oklab, sRGB, Display P3, colour-difference formulas, chromatic adaptation, gamut mapping and metamerism.
- More than 70 vision simulation models, based on Viénot 1999, Brettel 1997 and Machado 2009.
- An Ishihara-style plate generator for learning and demonstration only — not a medical device.
- Every tool free on every tier; optional paid plan passes are one-time purchases through Razorpay.
- Independent, and not affiliated with any government or institution.

What the page covers, section by section

1. **About Auric Artisan** — The platform is built and written by Chirag Bansal, who also writes every Learn article and the documentation. The name joins "Auric" (gold, warmth, luminance) and "Artisan" (careful craft). The page calls the current release "a working foundation — functional, researched, and expanding."
2. **What Auric Artisan provides** — Four capability areas: colour science and measurement, vision simulation, web analysis, and theme and design-system generation.

3. **Colour science and spectral tools** — The colour spaces covered (CIE 1931 XYZ, CIELAB, CIE LCH, CIELUV, Oklab and Oklch, sRGB, Display P3, Adobe RGB 1998, HSL/HSV/HSB, HWB and CMYK approximation); colour-difference metrics (CIE76, CIE94 and its graphic-arts variant, CIEDE2000, CMC l:c); chromatic adaptation (Von Kries, Bradford, CIECAT02, CAT16) and illuminants (D50, D55, D65, A, F2, F11 and LED series); gamut mapping, metamerism, contrast ratio, colour harmonies and Munsell reference.
4. **Vision simulation models** — Congenital deficiencies (the three dichromacies, three anomalous trichromacies, complete and incomplete achromatopsia), acquired conditions (cataracts, macular degeneration, glaucoma, diabetic retinopathy, optic neuritis) and low-vision models (blur, contrast loss, scotopic, mesopic and photophobia simulations). All are software models, not certified for clinical or safety-critical use.
5. **Web analysis and accessibility checking** — WCAG 2.1 and 2.2 contrast (AA 4.5:1 and 3:1; AAA 7:1 and 4.5:1), colour-blind-safe palette analysis, focus indicators, text alternatives, touch-target size; security headers; Core Web Vitals estimates and resource checks; palette extraction, dark-mode compatibility and responsive review.
6. **Theme generation and design systems** — Tonal scales in Oklab or Lab, semantic roles, automatic contrast pairing, dark-mode variants; exports to CSS custom properties, design-token JSON, Tailwind, SCSS, Figma-compatible styles, Swift/SwiftUI and Android/Jetpack Compose; palette import, comparison and a built-in accessibility audit.
7. **Articles and learning resources** — Topic areas from colour-space primers to design-token architecture, plus reference material.
8. **Ishihara-style generator** — For exploration and demonstration. The page's medical disclaimer: it is not a medical device, not a diagnostic test, and must not be used for clinical decisions, employment screening, certification or any official vision assessment.
9. **Who uses Auric Artisan** — Designers, developers, accessibility specialists, colour scientists, art directors, students and educators, print professionals, and game and film colourists.
10. **Data and privacy principles** — Collects only what is needed; does not sell personal information or build advertising profiles; preferences stay in the browser; colour inputs are processed locally where possible.
11. **Pricing, sign-ups and availability** — Accounts are live; paid access is sold as one-time passes; nothing auto-renews; features may change over time.
12. **Independence and neutrality** — Not a government entity or standards body; implementations follow published CIE standards, peer-reviewed research and W3C specifications.
13. **Our philosophy** — "Tools That Respect Intelligence": explain rather than obscure, and design with care for people with colour-vision deficiency, low vision or sensitivity to visual stimulation.

Note: The About page says payments are "in INR". The pricing page and plan cards describe charging in US dollars outside India and rupees within it. For what you will actually be charged, follow the pricing page and the checkout. See [Plans and pricing](#).

Acceptable Use Policy

A plain-language summary of Auric Artisan's Acceptable Use Policy — what you may do, what is prohibited, the web-analysis rules, and how the policy is enforced.

Official page: <https://auricartisan.com/legal/acceptable-use-policy/> — version 2.2, effective 27 April 2026, last updated 23 May 2026. **The official policy is authoritative.**

Key points

- Use Auric Artisan for colour science, learning, theme generation and creative exploration.
- Use web analysis only on sites you own or are authorised to test.
- Do not use security analysis for intrusion, scanning abuse, bypassing controls or harm.
- Vision simulations and Ishihara-style plates are informational, not medical diagnostics.
- Respect intellectual property, privacy, security and the law.

What you may do (section 2)

- Explore colour science and compare models.
- Read and reference the articles for learning and creative work.
- Build palettes, themes and design material.
- Create and export themes for legitimate sites, apps and brands.
- Review sites for performance, responsiveness, accessibility signals, palettes, security posture and interface quality.
- Run analysis on sites you own, manage or have permission to evaluate.
- Use the simulations for non-certified personal, academic, creative or technical research.

What is prohibited (section 3)

- Anything unlawful.
- Using analysis or reports to attack, exploit, disrupt or access systems without authorisation.
- Bypassing security controls, rate limits or access restrictions.
- Reverse engineering, decompiling, scraping, copying or bulk-extracting the platform.
- Submitting sites, files or content you have no right to analyse.
- Uploading malware, spam, deceptive content, harmful scripts or illegal material.
- Harassment, threats, hate speech, discrimination, impersonation or abuse of communication features.

- Presenting outputs as certified, medical-grade, legal, governmental or safety-critical results.
 - Abusing free access, automated requests or public endpoints in ways that degrade the platform.
-

Web analysis and security testing (section 4)

Authorisation is required; no intrusive activity (exploitation, credential testing, denial of service, unauthorised scanning); no claims of a certified audit unless independently verified; respect third parties; treat findings as guidance.

Vision simulations and Ishihara-style tools (section 5)

Simulations are model-based approximations. Ishihara-style plates are not medical-grade. Do not use them to diagnose, screen, certify or make medical decisions; consult qualified professionals.

Communication, collaboration and content (sections 6–7)

Where sharing or feedback features exist: no abusive or misleading content, no impersonating Auric Artisan, staff, partners, institutions or other users, no spam, phishing or harassment. You are responsible for what you submit, for having the rights to it, and for how you use outputs.

Enforcement (section 8)

Pricing pages alone are not an invitation to probe billing systems. Auric Artisan may limit, throttle, block or disable access; remove content; suspend accounts; and report illegal activity — without prior notice where needed for security, availability, legal compliance or safety.

Reporting (section 9)

Report behaviour, content or activity that may break the policy through the contact page.

Accessibility statement

A plain-language summary of Auric Artisan's Accessibility Statement — its commitment, what it aims to support, its stated limits and how to report a barrier.

Official page: <https://auricartisan.com/company/accessibility/> (last updated 23 May 2026). The official page is authoritative; this is a summary. For practical help using the site with assistive technology or comfort settings, see [Accessibility of the site](#).

The commitment

The goal, in the statement's words: "Everyone should be able to use Auric Artisan effectively, regardless of ability, device, or interaction method." Accessibility is treated as part of design and development. Because the platform has complex visual, analytical and experimental tools, the statement says full accessibility across every feature "may not always be achievable", and improvements are made where technically feasible.

What it aims to support

Where possible, the platform aims to support:

- **Semantic HTML** — proper heading hierarchy and landmarks;
- **Keyboard navigation** — all core functionality from the keyboard;
- **Readable text** — contrast-aware design, scalable layouts and legible type;
- **Assistive technology** — compatibility with modern browsers and screen readers;
- **ARIA attributes** — added meaning for dynamic content and widgets;
- **Focus management** — visible focus indicators and a logical tab order.

It encourages you to adjust your device, browser or assistive tools as well.

Stated limits

- Some tools and simulation interfaces may have limitations because of their technical nature, real-time rendering, colour-dependent output or experimental design.
 - Auric Artisan does not guarantee that all content will meet every accessibility standard at all times.
 - Spectral visualisations, the Ishihara-style generator and real-time rendering experiments may not be fully accessible to all users; alternative text and data views are provided where possible.
 - The Ishihara-style generator and vision simulations are exploratory and do not replace medical-grade testing.
-

Standard it reviews against

The statement says Auric Artisan aims to review important user-facing areas against WCAG 2.1 Level AA guidance where practical, and to prioritise the fixes with the greatest impact.

Reporting a barrier

The statement asks you to report accessibility barriers through the official support channels: email developer@auricartisan.com or use the contact form at <https://auricartisan.com/company/contact/>. It says reasonable efforts may be made to address concerns within the platform's technical scope. How to write a useful report: [Contact and support](#).

WEBSITE > COMPANY AND LEGAL

Author page

A summary of the author page for Chirag Bansal, founder and engineer of Auric Artisan, including how the articles are written and whom to contact.

Official page: <https://auricartisan.com/company/author/chirag-bansal/>.

Who writes Auric Artisan

Chirag Bansal is the founder and engineer of Auric Artisan and, in the page's words, "the author of everything published here". He builds and maintains the platform end to end — the colour engine, the tools, the site and the writing — works in India, and publishes the browser extension and the VS Code extensions.

What the work covers

- **Colour science** — the engine for CIE XYZ, L*a*b*, LCH, Oklab, sRGB and Display P3, colour-difference formulas (CIE76, CIE94, CIEDE2000, CMC), chromatic adaptation, gamut mapping with selectable rendering intents, and metamerism.
- **Colour vision** — simulation models following Viénot, Brettel and Mollon (1999), Brettel, Viénot and Mollon (1997), and Machado, Oliveira and Fernandes (2009). The Ishihara-style generator is a teaching tool, not a medical device.
- **Accessibility** — the rule engine behind the Analyzer: WCAG 2.2 and APCA contrast, ARIA 1.2 validation, accessible-name computation, screen-reader transcript modelling, colour-vision-deficiency checks and VPAT-style reporting.
- **Tooling** — the cross-browser extension and the VS Code extensions.

How the articles are written

- The articles and documentation are written by hand, not commissioned or syndicated.
- Where an article states a formula or threshold, it is the one the code uses.
- Articles name the published models they rest on. Most carry no formal bibliography; the page says a references section is "something the library is still missing".
- Interactive figures in the Learn library compute their results live with the same engine the tools use, so you can check a result yourself.
- Corrections are welcome and made in place, with the revision date updated.

FAQ page

A plain-language summary of the 32 questions on Auric Artisan's FAQ page, section by section, with notes where other pages give newer detail.

Official page: <https://auricartisan.com/company/faq/> (last updated 27 July 2026; 32 questions in ten sections). The official page is authoritative; this summary helps you find the answer you need. For questions about these docs themselves, see the [general FAQ](#).

Quick answers (from the top of the page)

- Auric Artisan is a colour-science platform: tools, simulations, web analysis and learning resources.
- More than 70 vision simulation models based on the Viénot, Brettel and Machado algorithms, for education and design, not clinical use.
- Web analysis covers WCAG contrast, security headers, performance signals and palette extraction.
- Theme generation exports CSS custom properties, design tokens, Tailwind configuration, SCSS and Figma-compatible output.
- Many tools work without an account.

- You own the content and exports you create.
- Only data needed to operate is collected; personal information is never sold.
- Simulation outputs are software models, not certified for clinical, regulatory or safety-critical use.
- Every tool is free on every tier; paid plans are one-time purchases through Razorpay.

The ten sections

Section	What it answers
1. Platform and company	What Auric Artisan is, who it is for, that it is free, that it is not a government platform, and who builds it
2. Colour science and tools	Supported colour spaces, colour-difference formulas (with rough ΔE_{00} thresholds: under 1 imperceptible, 1–2 perceptible on close inspection, over 2 clearly different), chromatic adaptation, metamerism, Oklab, and limits for colour-critical professional work
3. Vision simulations	The algorithms, their accuracy, using them to test designs, the Ishihara-style generator's limits, and the conditions simulated
4. Web analysis and accessibility	What the analysis checks, whether URLs are stored, WCAG AA versus AAA, and how palettes are extracted
5. Theme generation and exports	Export formats, perceptually even scales, commercial use of generated themes, and the built-in accessibility audit
6. Accounts and access	Whether you need an account, multiple accounts, and age requirements
7. Content and ownership	Who owns your outputs, the platform's own intellectual property, and quoting its articles
8. Billing and subscriptions	The pricing model, whether payments are accepted, and refunds
9. Privacy and security	What is collected, local versus server processing, account deletion, encryption and cookies
10. Support and contact	How to contact support, report an inaccuracy, or report a vulnerability

Answers worth knowing

- **Is it free?** Yes, every tool on every tier. Paid plans add conveniences.
- **Do you store the URLs I analyse?** The FAQ says no URL history or page content is retained after the analysis session.
- **Can I use generated themes commercially?** Yes. Auric Artisan claims no rights over tool outputs.
- **Can I quote the articles?** Brief quotation with attribution and a link is acceptable; full reproduction needs written permission (hello@auricartisan.com).

- **Multiple accounts?** Technically permitted, but using them to get round usage limits may lead to suspension of all of them.
- **Minimum age?** No specific age group; parents and guardians should review the Terms before letting minors create accounts.
- **Refunds?** A 7-day money-back window on plan purchases; approved refunds return in 5–7 business days.
- **Is traffic encrypted?** Yes, HTTPS with HSTS; passwords are hashed.

Where other pages give newer or more specific detail

The FAQ was last updated before some later changes. These notes point you to the page that is more specific.

Note: Account creation. The FAQ says accounts "may be available where the auth system is enabled". Accounts are live: the Terms of Service (updated 12 August 2026) list registration, sign-in and the dashboard as live.

Note: Managing sessions. The FAQ's tip mentions a "Sessions page in your account settings". Signed-in devices are now under **Security & Privacy** in the dashboard. See [Security & Privacy](#) section.

Note: Deleting an account. The FAQ says access is disabled immediately and personal data is scheduled for deletion within about 90 days unless the law requires it to be kept. The dashboard describes deletion as immediate and permanent, and the Security page explains that payment records are kept in anonymised form for tax law. See [Delete your account](#).

Note: Reporting a vulnerability. The FAQ says to email hello@auricartisan.com with "Security" in the subject. The Security page and the contact form route security reports to security@auricartisan.com, with acknowledgement within 24 hours. Use security@auricartisan.com. See [Security](#) page.

Note: Currency. The FAQ describes payments in INR. The pricing page charges US dollars outside India and rupees within it.

Contact page

A plain-language summary of Auric Artisan's Contact page — the three inboxes, the seven topics, reply times and what happens after you send a message.

Official page: <https://auricartisan.com/company/contact/>. This summary explains how the page is organised; the step-by-step guide is [Contact and support](#).

What the page is

A single form that routes your message to one of three inboxes, depending on the topic you pick. The page says every message "is read and answered by a person — there is no ticket queue and no bot in front of it", and that replies can be late at weekends or during a release. It links **Check the FAQ first** at the top.

The three inboxes and seven topics

Inbox	What it is for	Topics
hello@auricartisan.com	"Everything that is not a bug, an integration, or a security matter."	Using a tool, Billing, Something else
developer@auricartisan.com	Bugs and the API — "Send the request, the response, and what you expected instead."	A bug, API or integration
security@auricartisan.com	Vulnerabilities and data requests, "Handled under the disclosure process on the security page, ahead of everything else."	Security, Privacy or data

The address shown on the page is what you are told; the site decides the destination from the topic you choose.

Reply times by topic

Topic	Reply time shown
Using a tool	2–3 days
Billing	1–2 days
A bug	2–4 days
API or integration	2–4 days
Security	Within 48 hours
Privacy or data	Within 30 days
Something else	Up to a week

The page's description and the FAQ also give a general figure of 1–3 business days.

The form

- **Name**, **Email** and a reference field whose label changes with the topic (for example **Order or invoice ID** for Billing, **URL where it happened** for a bug, **Affected URL or endpoint** for Security).
 - A message editor with bold, italic, inline code, bulleted list, code block and link, sent as plain text; up to 2,000 characters.
 - Up to four images (PNG, JPEG, GIF or WebP, up to 12 MB each before they are shrunk), which you can mark up with a pen, highlighter or box.
 - Each topic shows links that might answer the question faster.
 - The **Security** topic shows a notice: do not put a working exploit in the form; send the location and impact, and a way to send the rest will follow.
-

What happens next

The page lists three steps: you get a confirmation at the address you gave; the reply comes from the inbox, in that thread; and if the message leads to a change, you get the link when it ships.

Deep links

Adding `?topic=` and a topic name opens the form with that topic chosen, for example <https://auricartisan.com/company/contact/?topic=security>, which the Security page uses.

Content and Intellectual Property Policy

A plain-language summary of who owns what on Auric Artisan — your inputs and outputs, the limited licence you grant, the platform's own IP, open-source parts and exports.

Official page: <https://auricartisan.com/legal/content-and-intellectual-property/> — version 2.2, effective 27 April 2026, last updated 23 May 2026. **The official policy is authoritative.**

Key points

- You own what you provide and the outputs generated from it.

- Auric Artisan receives only a limited licence to process your inputs and deliver results.
 - Palettes, themes, reports, exports and visual assets you generate are generally yours to use, subject to third-party rights.
 - Account, export, portfolio and billing features do not transfer ownership of your content.
-

Section by section

1. **User content and inputs** — Prompts, files, URLs, screenshots, palettes, colour values, notes, drafts and code snippets remain yours. You must have the right to submit and transform them.
 2. **Limited processing licence** — By submitting content you grant a limited, non-exclusive, royalty-free licence, only as needed to process it, cache it where technically required, show results to you, and use aggregated or anonymised technical patterns to improve quality. Ownership does not transfer.
 3. **Generated outputs** — Colour-science outputs, theme tokens and CSS variables, web analysis reports, learning material you create, and simulation results are generally yours to use.
 4. **Platform intellectual property** — The code, design system, interface, branding, logos, documentation, workflows, analysis logic and model implementations belong to Auric Artisan or its licensors. No copying, reverse engineering, scraping or derivative works without written permission, except where law or an open-source licence allows.
 5. **Open-source components** — Covered by their own licences (MIT, Apache 2.0, BSD and others), which apply only to those components.
 6. **Exports and your responsibility** — You are responsible for how you use exports (PDFs, reports, images, code, CSS, tokens, palettes, data files, simulations, themes); check third-party rights before public or commercial use.
 7. **Content removal and enforcement** — Content that breaks the policy or the law may be removed or refused; takedown notices and legal requests may be acted on, sometimes without notice.
 8. **Third-party content** — Websites, fonts, images and libraries you analyse keep their own owners and licences; reports do not transfer rights in them.
 9. **Changes** — The policy may be updated.
-

In practice

- You can use generated palettes and themes in commercial work. The FAQ page says the same: Auric Artisan "does not claim any rights over tool outputs".
 - The articles are Auric Artisan's work: brief quotation with attribution and a link is fine; full reproduction needs permission.
 - Analysing someone else's site does not give you rights in its content.
-

Cookie Policy

A plain-language summary of Auric Artisan's Cookie Policy — cookie categories, the storage list, the preferences panel and how to change or withdraw consent.

Official page: <https://auricartisan.com/legal/cookies/> — **Cookie Policy & Preferences**, version 1.2, effective 27 April 2026, last updated 23 May 2026. **The official policy is authoritative.**

Key points

- Limited cookies and browser storage keep the site working and remember preferences.
- Account cookies (session and CSRF) are essential when you are signed in.
- No cookies for cross-site tracking, behavioural profiling or invasive advertising.
- Web analysis and theme generation use temporary processing data, not marketing cookies.
- Preferences such as theme and eye-rest are stored per browser and device.
- You can manage non-essential cookies on this page or in your browser.

Section by section

1. **Overview** — "We use limited browser storage to keep the site working, remember your settings, support interactive tools, and understand basic platform performance. We do not use cookies to follow you across the web."
2. **Cookies and local storage** — What each is; some data disappears when the session ends, some remains until it expires or you clear it.
3. **Current status** — Sign-in uses essential first-party cookies. Payment providers may set their own cookies inside their checkout.
4. **How cookies are used** — Three practical groups: essential, functional and privacy-friendly analytics. Essential ones cannot be turned off in the preferences panel.
5. **No cross-site tracking or marketing pixels** — No Facebook Pixel, LinkedIn Insight Tag, Google Ads remarketing cookies or similar trackers "on this page".
6. **Third-party services** — Infrastructure, security, font and analytics services may receive limited technical information; providers' cookies follow their own terms.
7. **Your legal rights** — Under the DPDP Act, GDPR, UK GDPR, CCPA and similar laws: know what is used, accept or reject non-essential cookies, withdraw consent, clear storage, and ask questions.
8. **Manage cookie preferences** — The on-page panel (below).
9. **Current cookie and storage list** — The table (below).
10. **Browser instructions** — Where to manage cookies in Chrome, Firefox, Safari and Edge. Disabling essential cookies or clearing storage may reset preferences or stop features working.
11. **Changes** — The policy may be updated.

Questions: privacy@auricartisan.com, as listed on the page.

The storage list (section 9)

Name	Category	Purpose	Duration
aa_cookie_consent	Essential	Your cookie and preference choices	Up to 1 year
aa_sid	Essential	Signed-in session	Up to 30 days, or until sign-out or expiry
aa_csrf	Essential	Protects signed-in forms from cross-site request forgery	Up to 30 days, or until sign-out or expiry
aa_theme	Functional	Light or dark mode	Until changed or cleared
aa_eye_rest	Functional	Eye-rest duration and dismissals	Until changed or cleared
aa_lang	Functional	Language preference	Until changed or cleared
aa_recent_tools	Functional	Recently used tools	Up to 30 days or until cleared
aa_perf	Analytics	Temporary page-performance timing	Session
Cloudflare Insights	Analytics	Aggregate performance measurement, if enabled	Provider-controlled or cookie-free
Payment provider cookies	Provider-controlled	Fraud prevention and checkout in official payment flows	Provider-controlled
Marketing pixels	Inactive	Not used	Not applicable

The preferences panel (section 8)

The panel lists four categories, each with a switch and a **Show cookies** button that lists the items in it:

Category	Description on the panel	Can be turned off?
Essential Cookies	Authentication, security, sessions and access control	No — marked Always Active
Functional Cookies	Theme, language, layout choices and form data	Yes
Analytics Cookies	Aggregate or pseudonymous usage and performance data, never used for advertising profiles	Yes
Marketing Cookies	"Reserved for campaign attribution if enabled later"; no marketing pixels are used	Yes

Buttons:

Button	What it does
Accept All	Turns every switch on (select Save Preferences to keep it)

Button	What it does
Reject All	Turns every optional switch off (select Save Preferences to keep it)
Save Preferences	Saves your choices: "Cookie preferences saved successfully."
Clear All Cookies	Clears non-essential cookies and your saved choice: "All non-essential cookies have been cleared."
Withdraw Consent	Shown once you have chosen; resets your choice: "Cookie consent withdrawn. Preferences reset."

Under the buttons, **Consent recorded:** shows when you last chose. Your choice is saved in your browser and applies to that device only.

The first-visit bar (**We value your privacy**) offers **Accept All**, **Reject All** and **Customise**; **Customise** opens this panel. The bar is not shown over the sign-in and verification pages. Full walkthrough: [Cookie consent and privacy](#).

Note: The panel's own tables list a slightly different set of item names and durations from section 9 (for example "1 year" for functional items). The purposes are the same. If an exact name or duration matters to you, ask through the contact page.

Data Retention and Deletion Policy

A plain-language summary of how long Auric Artisan keeps different kinds of data, how deletion requests are handled, and what may be kept for legal reasons.

Official page: <https://auricartisan.com/legal/data-retention-and-deletion-policy/> — version 2.2, effective 27 April 2026, last updated 23 May 2026. **The official policy is authoritative.**

Key points

- Only data needed to operate, secure and improve the platform is kept.
- Account, session, billing and API data are kept only as needed.
- Tool inputs are processed only as needed; temporary processing data is deleted or anonymised when no longer required.
- Security logs and abuse-prevention records may be kept for a limited period.
- You can request deletion of applicable personal data through the contact channels.

Section by section

1. **Retention principles** — Minimal retention: purpose limitation, storage limitation, accountability, and practices that follow what is actually deployed.

2. Types of data kept

Data	How long
Contact and support messages	As needed to respond and keep records
Tool inputs (URLs, colours, images, palettes, settings)	Only where necessary
Generated outputs (reports, palettes, themes, exports, previews)	May be temporarily stored, cached or delivered
Usage analytics (aggregated or anonymised)	May be kept to improve the platform
Security logs (IP addresses, request metadata, abuse signals, errors)	For security, debugging and abuse prevention
Billing records	As required by tax, accounting, payment-provider and financial rules

3. **Tool processing data** — What processing can involve. Avoid entering sensitive personal data, credentials, medical records, payment information or private tokens into exploratory tools unless a feature asks for it and explains why.
4. **Deletion requests** — Request account deletion through the account controls or support. A valid request is reviewed; eligible data in active systems is removed, minimised or anonymised within a reasonable period; backups and security logs may persist until their normal rotation. Save anything you need first — deleted data may not be recoverable.
5. **Automatic deletion** — Temporary processing data, cached reports and extracted assets may be removed after use; session tokens, cookies and local preferences expire according to browser settings or platform configuration; security logs are kept for a limited period.
6. **Legal and compliance retention** — Data may be kept longer when law, valid legal requests, disputes, investigations, abuse prevention, security or financial record-keeping require it, and then deleted, minimised or anonymised.
7. **Your rights** — Access, correction, export, restriction, objection, withdrawing consent, appeal and deletion, depending on applicable law (GDPR, India's DPDP Act, CCPA/CPRA and others). Use the account controls, the contact page or official support channels. Requests are answered within the time the law requires.
8. **Data security** — Access controls, secure transport, logging, monitoring and encryption where appropriate. See [Security Policy](#).
9. **Changes** — May be updated; continued use means acceptance.

How this applies to your account

- **Delete your account** from the dashboard's danger zone. The Security page explains that erasure anonymises personal data while keeping financial records, because tax law requires invoices to be kept. See [Delete your account](#).
 - The FAQ page gives approximate timings: access disabled at once, personal data scheduled for deletion within about 90 days unless the law requires it to be kept.
 - **Data in your browser** is under your control: clear it in your browser's settings, or with **Erase this browser's workspace** in the dashboard.
 - **Privacy or data** requests through the contact form have a stated reply time of within 30 days.

WEBSITE > COMPANY AND LEGAL

Browser Extension Privacy Policy

A plain-language summary of the privacy policy for the Auric Artisan browser extension — what it accesses, what it stores locally, its permissions and what it never does.

Official page: <https://auricartisan.com/legal/extension-privacy/> — version 1.0, effective and last updated 27 July 2026. **The official policy is authoritative.** The website itself is covered by the separate [Privacy Policy](#).

Key points

- The extension only touches page content when you use a tool on that page.
 - Settings, saved colours and history live in your browser's extension storage.
 - No analytics, no telemetry, and no page data is transmitted anywhere.
 - Nothing is sold, rented or shared — "there is nothing to sell".
 - Three permissions are optional and requested only when you turn on the feature that needs them.
-

Section by section

1. **Scope** — The colour, accessibility and developer toolkit for Chromium-based browsers (Chrome, Edge) and Firefox.
2. **What it accesses**
 - *Page content, only when you act* — the eyedropper, contrast and accessibility audits, vision filters, element inspector and palette extraction read the page at the moment you use them; nothing scans

in the background.

- *Settings and library* — kept in the browser's local extension storage.
- *Optional account sync* — if you connect the extension to an Auric Artisan account in future, only what you choose to sync would be sent. No account is required and nothing syncs by default.

3. **What it never does** — No analytics or telemetry; no sending of page data (colour maths, audits and simulations run locally; page content, URLs, screenshots and results never leave your device); no sale or sharing of data. "In short: all processing is local; the extension makes no network requests with your data."

4. Permissions

Permission	Required or optional	Why
Host access	Required	Run tools on the page you use them on
Scripting	Required	Add the tool script when needed
Storage	Required	Your settings and library
Clipboard write	Required	Copy colour values and snippets
Context menus	Required	Tool shortcuts in the right-click menu
Side panel (Chrome)	Required	Dock the workspace
Clipboard read	Optional	Paste in the custom menu
Downloads	Optional	Save As from the menu
Sessions	Optional	Reopen a closed tab

The optional ones are requested only when you turn on the custom context menu, and you can decline or revoke them in your browser.

5. **Storage and deletion** — Everything is in local extension storage. Clear the colour library and history from the extension's settings, or uninstall to remove everything.
6. **Changes** — A version that changes what the extension accesses or stores will come with an updated policy, and material changes will be noted in the store listing's changelog.
7. **Contact** — Through the contact page.

Legal index

What is on Auric Artisan's Legal and Policies index page, with one line on each of the twelve policies.

Official page: <https://auricartisan.com/legal/> — **Legal & Policies**: "Every document, policy, and term governing the use of Auric Artisan — clear, current, and in one place."

The index header shows "All policies effective: April 27, 2026", "Last updated: May 23, 2026" and "Version: 2.2". Several policies have been updated since then; each policy page shows its own date and version. See [How to read the policies](#).

The documents

Document	Index description	Summary
Terms of Service	Platform usage agreement, eligibility, user responsibilities and legal terms	Terms of Service
Privacy Policy	How personal data is collected, used, stored and protected; data rights	Privacy Policy
Cookie Policy	Cookie categories, local storage and preference management	Cookie Policy
Security Policy	Security principles, encryption, authentication, infrastructure and incident response	Security Policy
Acceptable Use Policy	Permitted and prohibited activities, enforcement and usage guidelines	Acceptable Use Policy
Subscription and Billing	Plan availability, checkout status, billing cycles, cancellations	Subscription and Billing Policy
Refund Policy	Refund eligibility, cancellation, disputed charges and digital-service terms	Refund Policy
Content and Intellectual Property	User content ownership, platform IP, licensing grants	Content and IP Policy
License Agreement	Software licence terms, access restrictions and open-source attributions	Licence Agreement
Data Retention and Deletion	Retention periods, deletion timelines, backups and your right to erasure	Data Retention and Deletion Policy
Transparency and Ethics	Philosophy, operational transparency, ethical advertising, fair pricing, independence	Transparency and Ethics Policy
Platform FAQ	Common answers, independence notes, availability	FAQ page

The Browser Extension Privacy Policy is published at <https://auricartisan.com/legal/extension-privacy/> and is summarised in [Extension Privacy Policy](#).

[WEBSITE](#) > [COMPANY AND LEGAL](#)

Licence Agreement

A plain-language summary of Auric Artisan's License Agreement — the licence to use the platform, its restrictions, your rights in outputs, open-source parts and termination.

Official page: <https://auricartisan.com/legal/licenses/> — **License Agreement**, version 2.2, effective 27 April 2026, last updated 23 May 2026. **The official agreement is authoritative.**

Key points

- Using the platform is a limited, non-exclusive, non-transferable licence.
 - Outputs you create — palettes, themes, reports, exports and simulations — remain yours.
 - Web analysis is only for sites and assets you own or are authorised to test.
 - Ishihara-style outputs do not replace medical-grade plates.
 - Account, API, export and paid features are licensed only for legitimate use.
 - The platform's code, branding, design systems and models remain Auric Artisan's.
-

Section by section

1. **Platform licence** — A limited, non-exclusive, non-transferable, revocable licence to access and use the platform. Ownership of the software, design, brand, models and documentation does not transfer.
2. **Current access status** — Features vary by rollout, region and readiness. Pricing pages alone are not a licence to bypass access controls.
3. **Restrictions** — You may not copy, redistribute or resell the platform; reverse engineer or extract models or source code; scrape or crawl it without permission; sublicense or rent access; remove notices or branding; build a directly competing product by copying its interface, workflow, data or logic; analyse sites you are not authorised to test; or present simulation outputs as medical, legal or certified results.
4. **Tool-specific output rights** — Colour-science results, generated themes and tokens, web analysis reports and simulation outputs may be used by their creator. Auric Artisan's own articles and documentation remain protected unless stated otherwise.
5. **Web analysis use** — Only for sites, code or assets you own, manage or are authorised to test.
6. **User-generated content** — Stays your intellectual property, subject to third-party rights. The licence you grant for processing is in the [Content and IP Policy](#).
7. **Exports** — Your responsibility once they leave the platform. Results depend on rendering, source material, models and devices; verify them before relying on them professionally.
8. **Open-source software** — Governed by the components' own licences (MIT, Apache 2.0, BSD and others), which do not cover Auric Artisan's proprietary parts.
9. **Termination** — The licence can end at once on breach of this agreement, the Terms or the Acceptable Use Policy; misuse of web analysis; copying, scraping or reselling; or discontinuation of the platform. You must then stop using it; content you already exported stays yours.
10. **Changes** — May be updated; continued use means acceptance.

WEBSITE > COMPANY AND LEGAL

Pricing page

How Auric Artisan's pricing page is organised and what each section says, with a pointer to the full plan-by-plan documentation.

Official page: <https://auricartisan.com/company/pricing/>. The pricing page and the checkout are authoritative for prices. The full, figure-by-figure documentation is [Plans and pricing](#); this page explains how the pricing page is laid out.

The opening

- Headline: **Pricing** — "Every tool is free, forever".
- Four facts: free tools, all of them; renewal: none — one payment; guarantee: 7-day money-back; term: 1 month or 12 months.
- ↓ **Compare plans** and **Talk to us**.

Key points (as the page lists them)

- Every tool is free on every tier — no tool is locked behind a paywall.
- Paid plans sell conveniences and scale: batch, API access, higher limits and a monthly token allowance.
- The REST API is metered in credits — 1,000,000 a month on Specialist, 10,000,000 on Industrial Pro; overage is opt-in, prepaid and never invoiced after the fact.
- Start free with no credit card.
- Whole-site accessibility crawls, up to 24 pages a run, unlock on Artisan; branded WCAG reports arrive with Specialist.
- A paid plan is a one-time pass for the term you choose; it does not auto-renew, and carries a 7-day money-back window.
- An account is required before any payment.

The sections

Section	What it holds
Choose your plan	The Monthly / Annual switch (Save 17%), USD \$ / INR ₹ , four figures ("40+ pro tools, all free", "\$0 to start — no card", "No auto-renewal, ever", "7-day money-back window") and the four plan cards
Free on every plan	The tools that used to be locked, now free
Tokens — what each plan includes	Tokens compared with API credits, the allowances, and the token estimator
API credits	Credit costs by endpoint type, what is included, going past the allowance, safety nets, and the Industrial Pro note for purchases before 12 August 2026
Optional add-ons	Add-ons free for everyone, included from Specialist, on request, or planned
Compare all features	The full comparison table
The ones people actually ask	Seven questions: are the tools free; what am I paying for; switching plans; free trial; payment methods; discounts; billing and refunds
Ready when you are	Open the tools — free and Create an account

Plan cards on other pages

The same plan cards also appear on the tools index (<https://auricartisan.com/tool/>) and the collections page, with their own monthly/annual switch and currency switch.

WEBSITE > COMPANY AND LEGAL

Privacy Policy

A plain-language summary of Auric Artisan's Privacy Policy — what data is collected, how it is used, who it is shared with, how long it is kept and your rights.

Official page: <https://auricartisan.com/legal/privacy/> — version 2.3, effective 27 April 2026, last updated 27 July 2026. **The official policy is authoritative.** This summary is for understanding only.

Key points

- Only the minimum data needed to operate and improve the platform is collected.
 - Sign-in, sessions and security features process authentication data where enabled.
 - Payments go through Razorpay; raw card, UPI or bank details are not stored.
 - Web analysis inputs can include URLs, page metadata, screenshots, extracted colours and scan results.
 - Theme, eye-rest and interface preferences may be stored locally in your browser.
 - Personal data is not sold or used for behavioural advertising.
-

Section by section

1. **Scope** — Covers all Auric Artisan tools, pages and features. Using the platform means agreeing to these practices.
2. **Current platform status** — Accounts, the dashboard, API keys and one-time purchases are live; recurring subscriptions are not offered. Payment credentials go to Razorpay and never touch Auric Artisan's servers.
3. **Data collected**
 - *Usage data* — first-party analytics, only with consent: the event name, the page path (never query strings), the referrer's origin, and a few coarse properties such as device class. No cookies, no cross-site tracking; Do Not Track and Global Privacy Control are honoured. No consent means no events.
 - *Device data* — browser, operating system, screen size, language and technical environment.
 - *Tool input data* — what you enter into tools.
 - *Communication data* — what you send through contact forms, email or feedback.
 - *Account data* — email, display name, authentication details, sessions, security events and saved preferences.
 - Not intentionally collected: raw card details, government IDs, precise location, biometric identifiers or medical diagnostic data.
4. **Web analysis data** — URLs, titles, metadata, screenshots, page structure, text snippets, palettes, performance metrics, layout information and security headers. Submit only sites you own or are authorised to test; do not submit private dashboards, credentials or restricted systems.
5. **Local storage and preferences** — Browser storage and cookies keep the site usable and remember preferences (theme, language, layout, eye rest, recent tool state, consent). Many stay on your device.
6. **How data is used** — Running the tools; understanding anonymous usage and fixing problems; security; answering messages; supporting account features. No behavioural profiling or automated decisions with legal or similar effects.
7. **No sale of personal data** — Not sold, rented or traded; no data brokers or cross-site behavioural tracking.
8. **Advertising and payments** — Only order records are kept (item, amount, payment reference). Personal data is not used for targeted advertising; the policy says it will be updated before or alongside any new advertising features.

9. **Security and protection** — HTTPS/TLS in transit and safeguards appropriate to the platform's stage. Vision simulations and the Ishihara-style generator are not medical tools.
10. **Third-party services** — Cloudflare (hosting, DNS, CDN, compute and storage for account, preference and order data), Razorpay (payments) and Google Fonts (font files on some pages; Google receives the technical request, such as your IP address). Analytics is first-party.
11. **Data retention** — Kept only as long as needed. Temporary tool data briefly; web analysis data cached temporarily; local preferences until you clear them; contact messages as needed for support; anonymous analytics longer in aggregate. Details: [Data Retention and Deletion Policy](#).
12. **Your rights** — Depending on where you live: access, rectification, erasure, portability, objection, withdrawing consent, grievance and appeal, and opting out of sale or targeted advertising (Auric Artisan does not sell data). Use the platform's controls, clear browser storage, adjust cookie settings, or contact Auric Artisan.
13. **Legal compliance** — Aims to follow India's Digital Personal Data Protection Act 2023, GDPR, UK GDPR, CCPA/CPRA and similar laws where they apply.
14. **Changes** — May be updated; material changes communicated through the platform or other reasonable channels; continued use means acceptance.

How to use your rights in practice

Right	How
See or take a copy of your data	Dashboard Security & Privacy › Export ; for more, contact page topic Privacy or data
Correct your data	Dashboard Profile ; for the email address, contact support
Delete your data	Dashboard danger zone, or contact page topic Privacy or data
Withdraw consent for analytics	Cookie Policy page or Settings ; or turn on Global Privacy Control in your browser
Clear local data	Your browser's site-data settings

See [Export your data](#) and [Delete your account](#).

[WEBSITE](#) › [COMPANY AND LEGAL](#)

Refund Policy

A plain-language summary of Auric Artisan's Refund Policy — what is sold, the 7-day money-back window, how to ask, how refunds are paid, and why there is nothing to cancel.

Official page: <https://auricartisan.com/legal/refund/> — version 4.0, effective and last updated 16 August 2026. **The official policy is authoritative.** The step-by-step guide is [Refunds](#).

Key points

- Sold through Razorpay checkout: one-time plan passes and prepaid API credit packs. Token packs are defined but not on sale; advertising bookings are arranged by hand.
 - Nothing renews automatically; a plan pass covers its term and stops. There is no subscription to cancel.
 - Every tool is free on every tier.
 - One-time plan purchases have a 7-day money-back window from the purchase date.
 - Approved refunds go back to the original payment method within 5–7 business days.
 - A refund ends the plan benefits, or removes the tokens or API credits the purchase granted.
 - Tokens and API credits are separate, and each is refunded on its own terms.
 - Unused prepaid API credits are refundable within the same 7-day window; spent credits are not.
 - Advertising bookings are refundable in full before the campaign starts.
-

Section by section

1. **What is sold today** — Plan passes (one month or twelve months) and prepaid API credit packs. Advertising bookings are paid through a link sent after an enquiry. All payments go through Razorpay on auricartisan.com (cards, UPI, netbanking); Auric Artisan never sees your credentials. An account is required before any payment.
2. **Pricing model** — Every tool is free; paid plans add conveniences. Prices, durations and inclusions are shown at checkout.
3. **7-day refund window**
 - *Plans* — refunded for any reason within 7 days of purchase.
 - *Token packs* — within 7 days if unused; partly used packs may be refunded pro rata at Auric Artisan's discretion.
 - *Prepaid API credits* — within 7 days to the extent unused; spent credits are not refundable; partly used balances may be refunded pro rata. The credit ledger on your account records every grant and debit.
 - *Included allowances* — part of the plan price; refunded with the plan, not separately.
 - *After 7 days* — case by case, against the checkout terms, provider records, account status, usage and law.
4. **How to request** — Use **Request a refund** in the Billing tab of your dashboard (the **Plan & Usage** section), or write through the contact page from the email address used for the purchase. Include the purchase date, what you bought and the order or payment reference.
5. **Processing and effect** — Refunds go through Razorpay to the original method within 5–7 business days of approval; your bank may take longer. The entitlement ends: plan benefits are removed and the account returns to the free tier; refunded tokens or credits are deducted. Your content and projects stay yours.

6. **Advertising bookings** — Full refund before the start date; after that, the undelivered portion case by case.
 7. **Accidental or unauthorised charges** — Contact Auric Artisan with the date, amount, reference and any receipts. Do not send full card numbers, passwords or private keys.
 8. **Ending a plan, renewals and cancellation** — Nothing renews, so there is nothing to cancel. A plan ends by itself and the account returns to Apprentice; every tool stays free and your work stays yours. Stopping sooner means asking for a refund. If recurring billing is ever introduced, it will be presented as such at checkout with the renewal date and amount, with a working cancel control, and the policy will be rewritten before the first such charge. Purchased tokens and API credits are not confiscated when a plan ends. Overage is prepaid, so no usage bill can follow.
 9. **Contact** — Through the contact page.
-

WEBSITE > COMPANY AND LEGAL

Security page

A plain-language summary of Auric Artisan's Security page — how requests are protected, encryption, authentication, payments, what it does not claim, and responsible disclosure.

Official page: <https://auricartisan.com/security/> — **Security at Auric Artisan** (last updated 23 May 2026, version 2.1). This is the trust page. It is separate from the legal Security Policy, summarised in [Security Policy](#). The official page is authoritative.

The overview

The page describes a layered ("defence in depth") design and headlines four figures: 256-bit AES encryption, a 9-step security pipeline, more than 20 security modules and a 3-tier defence model.

Defence-in-depth architecture

Three tiers and a token layer work together: server-side checks that run before any request is handled; abuse detection that escalates from throttling to a challenge to a block; a behavioural check that scores signals such as pointer movement, typing cadence and timing without interactive challenges; and signed tokens verified on the server.

Request security pipeline

Every request passes nine steps in order, and is rejected at the first one that fails: rate limiting, CSRF protection, request validation, session integrity, token verification, bot scoring, abuse analysis, escalating countermeasures (soft throttle, visual challenge, temporary block, permanent ban) and security logging.

Encryption and data protection

- TLS 1.3 in transit, with HSTS.
 - Stored data encrypted at rest by Cloudflare; Auric Artisan does not run its own storage.
 - API keys, signing secrets and database credentials kept in an encrypted secret store that cannot be read back.
 - Two-factor secrets encrypted before storage under a separately held key.
-

Authentication and access control

- Passwords hashed with PBKDF2-SHA256 at 600,000 iterations; they cannot be recovered, only replaced.
 - API keys kept only as a SHA-256 hash plus a short prefix; shown once.
 - TOTP two-factor authentication with backup codes.
 - OAuth sign-in protected with PKCE and state checks.
 - Device and session management: sessions rotate, expire on inactivity, have a maximum lifetime and can be revoked remotely.
-

Infrastructure security

Deployed on Cloudflare's edge network, with DDoS protection, a web application firewall and bot management; strict security headers on every response; HSTS with a one-year max-age, submitted for browser preload lists; each worker isolated in its own sandbox.

Payments

- Cards never reach Auric Artisan: payments go through Razorpay, a PCI-DSS compliant gateway.
- Orders are priced from Auric Artisan's own catalogue, so a modified browser cannot change what a purchase costs.
- Payment notifications are verified before they affect an account, and delivering one twice grants an entitlement once.
- Account erasure anonymises personal data rather than destroying financial records, because tax law requires invoices to be kept: "the transaction remains and your identity does not."

What we do not claim

The page lists its own limits:

- **No formal certification** — not SOC 2, ISO 27001 or HIPAA certified.
- **No external penetration test** — the measures are implemented and tested by Auric Artisan, not independently audited.
- **Operated by one person** — fixes ship quickly, but there is no 24/7 on-call rotation and no separation of duties; response times are best effort.
- **Third-party dependencies** — email through Resend, payments through Razorpay, hosting and storage through Cloudflare; their security practices are their own.

Responsible disclosure

- Send a detailed report to security@auricartisan.com: the vulnerability, steps to reproduce and any proof of concept.
- Or use the contact form, which opens with the Security queue selected:
<https://auricartisan.com/company/contact/?topic=security>.
- Do not disclose publicly until the issue has been investigated and patched.
- Stated aims: acknowledge within 24 hours, an initial assessment within 72 hours, and a fix for confirmed vulnerabilities within 30 days.
- "Researchers acting in good faith will never face legal action."

The contact form's Security topic asks you not to paste a working exploit into the form; send the location and impact, and a way to send the rest will follow.

[WEBSITE](#) > [COMPANY AND LEGAL](#)

Security Policy

A plain-language summary of Auric Artisan's legal Security Policy — principles, data protection, web-analysis scope, your responsibilities, limits, vulnerability reporting and incidents.

Official page: <https://auricartisan.com/legal/security/> — **Security Policy & Safe Use**, version 2.2, effective 27 April 2026, last updated 23 May 2026. **The official policy is authoritative.** For the technical description of how the platform is protected, see the separate [Security page](#).

Key points

- Account, session, billing, API and tool traffic are protected where those features are enabled.
 - Web analysis must only be used on sites you own or are authorised to test.
 - Security checks in web analysis are informational — not a certified audit or penetration test.
 - Collection and retention of submitted URLs, reports and metadata is kept to a minimum.
 - No system can guarantee perfect security.
-

Section by section

1. **Principles** — Minimisation, least privilege, responsible tooling, and improving controls as infrastructure matures.
 2. **Current infrastructure status** — Payments are valid only through official live checkout flows.
 3. **Data and transmission security** — Encrypted transport; limited access to submitted inputs and reports; secure, HttpOnly session cookies and CSRF checks for signed-in requests; origin checks, request-size limits, security headers and rate limits on sign-in routes; local storage for preferences where practical.
 4. **Web analysis scope** — Only for sites, pages and assets you own, control or have permission to test. Do not probe, stress or exploit others' systems; do not present results as certification; do not submit private URLs, credentials or admin pages unless authorised; do not misrepresent another organisation's security.
 5. **Access control and internal practices** — Restricted administrative access, separate development and production, no secrets in public code, reviewed dependencies.
 6. **Your responsibilities** — Submit only what you may analyse; keep credentials and confidential URLs out of tool inputs; check outputs before relying on them; use vision tools only for exploration and learning; report issues responsibly rather than attempting unauthorised access.
 7. **Limitations and non-certification** — No guarantee of absolute security; outputs are not certified industrial, medical, regulatory or safety-critical results.
 8. **Vulnerability reporting** — Report through the contact page with enough detail to reproduce. Do not access, change, delete, download or disclose data that is not yours; act in good faith.
 9. **Security incidents** — Investigate, contain, fix, and notify affected users or authorities where the law requires.
 10. **Changes** — May be updated.
-

Reporting a vulnerability in practice

The Security page gives the specific route: email security@auricartisan.com, or use the contact form's **Security** topic (<https://auricartisan.com/company/contact/?topic=security>). It aims to acknowledge within 24 hours. See [Security page](#).

WEBSITE > COMPANY AND LEGAL

Subscription and Billing Policy

A plain-language summary of Auric Artisan's Subscription and Billing Policy — what is on sale, why nothing renews, tax, API credits, overage, spend caps, ceilings, expiry and downgrades.

Official page: <https://auricartisan.com/legal/subscription-billing/> — version 2.4, effective and last updated 16 August 2026. **The official policy is authoritative.** The practical guides are in [Account and billing](#).

Key points

- One-time plan passes are sold through Razorpay checkout (cards, UPI, netbanking). Token packs are defined but not on sale — tokens arrive with a plan.
- Recurring subscriptions are not offered: a purchase grants a fixed period, never auto-renews, and leaves nothing to cancel; to stop early, ask for a refund.
- An account is required before any payment.
- No one is charged unless an official checkout clearly shows the final terms.
- Every tool is free on every tier; paid plans add conveniences and higher quotas.
- API usage is metered in credits against a published allowance — 1,000,000 on Specialist, 10,000,000 on Industrial Pro.
- API credits and tokens are separate balances.
- API overage is opt-in, off by default and strictly prepaid: no API usage is ever invoiced after the fact.
- Industrial Pro subscriptions started before 12 August 2026 keep their unlimited API allowance.

Section by section

1. **Current billing status** — Account registration and checkout for one-time plan passes and prepaid API credit packs. Recurring billing is not enabled. Changes to what or when you are charged are announced in the policy before they take effect.
2. **Pricing pages and preview information** — Prices and plan tables on the site are not purchase offers unless a live checkout presents final terms. Preview prices, names and features may change.
3. **Payments, renewals and cancellation** — What is live: one-time passes and prepaid API credit packs through Razorpay on auricartisan.com. No automatic renewal, no mandate, no stored card. An account is required. No cancellation flow exists because no recurring charge exists; ending early is a refund. Stripe is not enabled; every live payment goes through Razorpay.
4. **Paid services** — A single charge for one month or twelve. Plan scope, price, term and refund rules are shown before payment. **The price you see is the total you pay:** no GST or other tax is added or collected, because Auric Artisan is not currently registered for GST; receipts are payment receipts, not GST invoices, and cannot be used for input tax credit. If you need a GST invoice, wait until registration is in place. When a term ends the account returns to Apprentice. To stop earlier, a refund is unconditional

within 7 days and case by case after; the dashboard carries a **Request a refund** button. If recurring billing is introduced later, the renewal date and amount will be shown before payment, with a working cancel control, and the policy updated first.

5. API usage credits, overage and spend caps

- *5.1 Measurement* — One credit per standard request, weighted up for heavier endpoints (weightings in the API documentation). Counted per account, not per key. Allowances: 1,000,000 on Specialist, 10,000,000 on Industrial Pro, refreshing each billing month; none on plans without API access.
- *5.2 Overage* — When the allowance is used up, requests are refused and nothing is charged. Optional overage (off by default) spends prepaid credits at \$1.00 (about ₹85) per 100,000; if the balance does not cover a request, it is refused. No usage is invoiced afterwards and no debt is created.
- *5.3 Spend caps* — A monthly cap in money, up to \$10,000, limiting overage only.
- *5.4 Hard ceilings* — Ten times the included allowance per month, whatever the settings; support can raise it.
- *5.5 Expiry* — Included credits and tokens expire at the end of their period. Purchased credits and tokens do not expire at period boundaries while the account is open. The Apprentice starter grant is one-time and non-renewing.
- *5.6 Plans ending and downgrades* — The included API allowance ends with the plan. Purchased credits are kept and become spendable again on a plan with API access. Check your plan can spend credits before buying: a balance bought on Apprentice or Artisan is recorded and does not expire, but cannot be spent there.
- *5.7 Previously sold unlimited access* — Industrial Pro purchases before 12 August 2026 are metered at 1,000,000,000 credits a billing month.
- *5.8 Changes* — Weightings, allowances and the overage rate may change; credits already bought keep their number.

6. **Advertisements** — Paid plans include an ad-free option. Ads shown to free users are limited and consent-gated; private data is not used for advertising profiles.

7. **Mistaken or unauthorised charges** — Contact Auric Artisan with the date, amount, provider and any reference; it is checked against checkout and provider records.

8. **Service availability and development** — Features may change. Web analysis is for sites you own or may analyse. Simulations and Ishihara-style generators are exploratory.

9. **Changes** — The policy may be updated as the checkout, pricing or service model changes.

Note: The policy calls the refund button part of the dashboard's "Billing tab". In the current dashboard it is in the **Plan & Usage** section; the old Billing address still leads there.

Terms of Service

A plain-language summary of Auric Artisan's Terms of Service, section by section, with the official page as the authority.

Official page: <https://auricartisan.com/legal/terms/> — version 2.4, effective 27 April 2026, last updated 12 August 2026. **The official Terms are authoritative.** This summary is for understanding only; it does not change or add to them.

Key points

- Auric Artisan provides colour tools, colour-science resources, web analysis, theme generation and visual simulations, including more than 70 vision simulation models.
- Web analysis is for sites and assets you own or are authorised to test.
- Accounts are live. One-time purchases go through Razorpay; recurring subscriptions are not offered.
- API access is metered in API credits against a published monthly allowance; overage is opt-in, prepaid and never invoiced afterwards.
- API credits and tokens are separate balances, and neither pays for the other.
- Outputs are exploratory and informational — not certified professional, medical, legal, security or accessibility advice.
- The Ishihara-style generator does not replace medical-grade Ishihara plates.

Section by section

1. **Introduction and agreement** — Using the platform means agreeing to the Terms and the policies they reference. The plain-language note: use the tools responsibly, respect ownership and safety limits, and understand the platform is still evolving.
2. **What Auric Artisan provides** — Colour tools and models, articles, simulations, web analysis (security-oriented checks, Lighthouse-like performance review, responsive review, palette extraction, structure and visual analysis) and theme generation.
3. **Current platform status** — Registration, sign-in and the dashboard are live. Plan passes and advertising bookings are sold as one-time purchases through Razorpay; token packs are not on sale. Nothing renews and no mandate is stored; "subscription" in the Terms means the plan record and its period, not a recurring charge. Every tool is free on every tier. API access is included from Specialist and metered against a finite allowance for purchases on or after 12 August 2026. Features may change. Pay only through the Razorpay checkout on auricartisan.com.
4. **Eligibility and access** — You are responsible for complying with the laws, permissions and consent rules where you are. Some parts need registration; access can vary by tool, region and capacity.
5. **Accounts and security** — You are responsible for keeping your credentials secure, keeping recovery details current, and for all activity through your account.

6. **Acceptable use** — No unlawful activity, harassment, abuse, spam, unauthorised access or disruption. No scraping, reverse engineering, overloading, copying, reselling or redistributing the platform without written permission. Full rules: [Acceptable Use Policy](#).
7. **Web analysis and authorised testing** — Analyse only what you own, manage or are explicitly authorised to test. Do not use findings to attack or gain access to anything. Security observations are informational and are not a certified audit; other observations are guidance. You are responsible for having permission before submitting a site.
8. **User content and ownership** — You keep ownership of what you create, upload or submit, subject to third-party rights. Auric Artisan receives only the limited permission needed to process it and run the platform. You are responsible for not infringing others' rights. See [Content and IP Policy](#).
9. **Simulations and disclaimers** — Outputs are informational and "as is", and must not replace certified medical, legal, governmental, accessibility, security, industrial, regulatory or safety-critical review. The Ishihara-style generator is not a clinical tool and does not diagnose.
10. **Pricing, payments and billing** — Auric Artisan sells one-time plan passes, token packs and advertising bookings through Razorpay; price, duration and inclusions are shown at checkout. Tokens and API credits are separate. API usage is metered against a finite allowance; exhausted allowances are refused, not billed. Overage is optional, off by default and prepaid, limited by your spend cap and a ceiling of ten times the allowance, and never invoiced afterwards. Industrial Pro purchases before 12 August 2026 keep their unlimited API allowance. Billing, cancellation, tax and refunds follow the Subscription and Billing Policy and Refund Policy in force at purchase, including the 7-day money-back window. Report any other payment request as fraudulent.
11. **Third-party services and availability** — The platform relies on third parties for hosting, analytics, infrastructure and security, and is not responsible for their outages or behaviour. Tools and services may be changed, paused or removed.
12. **Liability, governing law and changes** — To the extent the law allows, no liability for indirect, incidental, consequential, special, exemplary or punitive damages from use, reliance on outputs, interruption, data loss or third-party issues. The Terms are governed by the laws of India, and aim to align data practices with laws including India's Digital Personal Data Protection Act, 2023. The Terms may be updated; continued use means acceptance. Together with the referenced policies, they form the agreement between you and Auric Artisan.

Note: Section 10 mentions payments "in INR" and lists token packs among things sold, while section 3 says token packs are not on sale. The pricing page charges US dollars outside India and rupees within it, and marks token top-ups "not on sale". Follow the pricing page and checkout for what is actually offered.

What this means for you

- You can use every tool without paying, for sites and material you have the right to use.
- If you create an account, keep your password and backup codes safe; you are responsible for what happens under it.

- You own your work.
- Treat every result as guidance, not certification.
- Pay only through the official checkout.

Timeline

A summary of Auric Artisan's company timeline page, from the first planning milestone in June 2025 to version 0.9.11 in August 2026.

Official page: <https://auricartisan.com/company/timeline/> — "How we got here". The page says Auric Artisan "started as a colour-science engine and became a platform", marks the turning points, and fills in everything between them. For every change in a release, the Changelog (<https://auricartisan.com/library/changelog/>) carries the detail from version 0.9.0 onward.

The page loads its entries as you read. If it cannot load them it says "The timeline could not be loaded." — refresh to try again.

The entries

2025

Date	Version	Entry
30 June 2025	0.0.1	Auric Artisan System Planning and Knowledge Architecture
5 July 2025	0.1.0	Core Color Science Engine Initialization
18 July 2025	0.2.0	Foundational Tools Release
2 August 2025	0.3.0	Gradient and Palette Systems
18 August 2025	0.4.0	Advanced Tooling Expansion
6 September 2025	0.5.0	Specialized Color Processing Tools
10 October 2025	0.6.0	Perception and Vision Research Systems
12 November 2025	0.8.0	Rendering, HDR and Gamut Systems
31 December 2025	0.9.0	Auric Artisan Pre-Release Stabilization

2026

Date	Version	Entry
1 January 2026	0.9.1	Q1 Development Cycle Begins
12 January 2026	0.9.2	Engine Optimization Update
5 February 2026	0.9.3	Vision Simulation Upgrade
20 February 2026	0.9.4	Tool Accuracy Refinement
10 March 2026	0.9.5	Color Model Lab Expansion
24 March 2026	0.9.5	Spectral and Experimental Layer
8 April 2026	0.9.6	System Integration and Validation
13 April 2026	0.9.6	Vision Simulation and Color Model Lab Advancement
15 April 2026	0.9.7	Deployment — Site marked "In Development"
19 April 2026	0.9.75	Stability and UI Release
2 May 2026	0.9.8	UI Cleanup and Unified Simulation Release
5 June 2026	0.9.9	Beta, Libraries, and Design System Generator
27 July 2026	0.9.10	Auric Studio and Accessibility Platform Release
12 August 2026	0.9.11	Metered API and Recorder Release

Each entry on the page has a summary and a longer description. The latest release is linked to the Changelog as **Current version**.

Transparency and Ethics Policy

A plain-language summary of Auric Artisan's Transparency and Ethics Policy — its philosophy, what it commits to document, accuracy limits, automation, advertising, pricing fairness and independence.

Official page: <https://auricartisan.com/legal/transparency/> — **Transparency & Ethics Policy**, version 2.2, effective 27 April 2026, last updated 23 May 2026. **The official policy is authoritative.**

Key points

- Auric Artisan explains what its tools can and cannot do.
 - Web analysis outputs are guidance, not certified security, accessibility or performance audits.
 - Vision simulations and the Ishihara-style generator are exploratory, not medical diagnostics.
 - Pricing, account, checkout and paid features apply only where clearly enabled.
 - The platform stays independent and documents limitations, changes and data practices.
-

Section by section

1. **Philosophy** — "Tools should respect intelligence": help people understand what they are doing instead of hiding it behind vague output; avoid inflated claims; make limits visible.
2. **Operational transparency** — A commitment to document what data is collected and why; what the tools can and cannot do; when outputs are estimates, heuristics or models; how submitted material is processed; what is still in development; and changes to terms, pricing, access, payments or availability.
3. **Accuracy and limitations** — Results can depend on browser behaviour, rendering, source quality, network conditions and implementation. Web analysis results are not certified audits, official Lighthouse reports, legal compliance reviews or guaranteed findings. Vision models may not match every viewer, display or lighting condition. The Ishihara-style generator is not a medical device.
4. **Automation and AI** — Where automated systems, machine learning or AI-assisted tools are used, the aim is to say so in the interface or documentation; outputs should be reviewed; none are presented as professional certification or advice.
5. **Advertising and commercial status** — No behavioural profiling for advertising, no use of private data for ad targeting, no hidden sponsorship mixed into tool outputs; sponsored content will be clearly distinguishable.
6. **Pricing status and fairness** — No hidden fees or surprise charges; costs shown before purchase; a clear line between free, preview and paid; advance notice where practical for material changes.
7. **Neutrality and independence** — Not a government entity, medical provider, certification body, standards authority or testing laboratory. No partnerships that compromise privacy, data integrity, honest labelling or editorial independence.
8. **User responsibility** — Verify outputs and use your own judgement: analyse only what you may; do not treat analysis as a professional audit or simulations as diagnosis; review generated material before production; respect others' rights.
9. **Ongoing evaluation** — Tool labels, model limits, explanations and privacy notices are reviewed as features are added. Feedback about unclear pricing, data handling or limits is welcome through the contact page.
10. **Changes** — May be updated; continued use means acceptance.

Where the commitments show up in practice

- The Security page's **What we do not claim** section lists missing certifications, the lack of an external penetration test, and that the platform is operated by one person. See [Security page](#).
- The pricing page marks unbuilt features **Coming soon** or **Planned**, and explains manual processes (discounts, proration) rather than showing controls that do not exist. See [Plans and pricing](#).

This folder supports the summaries in [docs](#). The glossary explains the legal and policy words those documents use; the related page maps each policy to the product documentation where it applies in practice.

Page	What it covers
Glossary	Legal, privacy, billing and security terms in plain language
Related	Which product docs each policy affects, and the other help pages

[WEBSITE](#) > [COMPANY AND LEGAL](#)

Glossary

Plain-language definitions of the legal, privacy, billing and security terms used in Auric Artisan's policies.

These definitions explain terms as the policies use them. They are not legal definitions and do not change the policies.

Acceptable use — The rules on what you may and may not do with the platform; set out in the Acceptable Use Policy.

Anonymise — To remove the link between data and a person, so the data remains but no longer identifies anyone. Auric Artisan anonymises payment records on account erasure.

APCA — The Accessible Perceptual Contrast Algorithm, a newer way to measure text contrast, used alongside WCAG ratios in the Analyzer.

Authorised testing — Analysing a site, page or asset you own, manage or have explicit permission to test. The only kind of web analysis the policies allow.

CCPA / CPRA — California's consumer privacy laws, named in the Privacy Policy among the laws it aims to follow where they apply.

Chargeback — A payment reversed by your bank or card issuer.

Consent (cookie consent) — Your choice, recorded in your browser, about which optional cookie categories may run.

CSRF — Cross-site request forgery: a trick that makes your browser send a request you did not intend. The site uses a CSRF cookie and checks to prevent it.

Data minimisation — Collecting and keeping only the data that is needed.

Do Not Track (DNT) / Global Privacy Control (GPC) — Browser signals asking sites not to track you. Auric Artisan's analytics honours both.

DPDP Act — India's Digital Personal Data Protection Act, 2023, named in the Terms and Privacy Policy.

Effective date — The date a policy took effect. **Last updated** is the date of its latest change.

Entitlement — What a purchase gives your account, such as a plan's benefits or a credit balance. A refund ends the entitlement.

Erasure (right to) — The right to ask for personal data to be deleted, where applicable.

First-party — Set or run by auricartisan.com itself, rather than by another company.

GDPR / UK GDPR — The European Union's and the United Kingdom's data-protection laws.

GST — India's Goods and Services Tax. Auric Artisan is not currently registered for GST, so no GST is charged and receipts are not GST invoices.

HSTS — HTTP Strict Transport Security: a rule telling browsers to use only secure HTTPS connections to the site.

Input tax credit — A business's ability to offset GST paid on purchases; not available on Auric Artisan's receipts.

Licence (noun) — Permission to use something under conditions. The License Agreement gives you a limited licence to use the platform.

Mandate — A standing permission for a merchant to charge you again. Auric Artisan stores none.

Overage — API use beyond the included monthly allowance, paid from prepaid credits only if you turn it on.

PCI-DSS — The card industry's security standard. Razorpay, which handles card details, is PCI-DSS compliant.

Penetration test — An authorised simulated attack to find weaknesses. The Security page states that no external one has been done.

Plan pass — A one-time purchase of a paid plan for a fixed term; it does not renew.

Portability (right to) — The right to receive a copy of your data in a usable format.

Pro rata — In proportion; for example, refunding the unused part of a partly used balance.

Processing licence — The limited permission you give Auric Artisan to process what you submit, only as needed to run the tool.

Responsible disclosure — Reporting a security weakness privately and giving time to fix it before telling anyone else.

Retention — How long data is kept.

SLA — Service-level agreement: a contractual promise of uptime. Auric Artisan has none yet.

SOC 2 / ISO 27001 / HIPAA — Security and privacy certifications or regimes. The Security page states Auric Artisan holds none of them.

Telemetry — Usage data a program sends back to its maker. The browser extension and VS Code extensions send none.

Third party — A company other than Auric Artisan, such as Cloudflare, Razorpay, Google Fonts or Resend.

TLS — Transport Layer Security, the encryption behind HTTPS.

WCAG — The Web Content Accessibility Guidelines published by the W3C. Level AA and AAA are its common targets.
