Portfolio Builder and Portfolio Index

What the Portfolio Builder and the Portfolio Index are, who they are for, and how to publish your first portfolio.

The **Portfolio Builder** at <https://auricartisan.com/portfolio/> turns the work you make on Auric Artisan into a public page. You stack sections — headings, Markdown text, images, galleries, a timeline, stats, testimonials, your saved palettes and more, 25 kinds in all — and type straight into a live preview of the page as it builds beside you. You choose a typeface, a paper and a rhythm, and an accent colour taken from your own saved palettes and graded for contrast. A **Check** pane audits the rendered page for accessibility problems before anyone else sees it.

When it is ready, you publish it at your own address, auricartisan.com/p/your-name, or share it privately as a self-contained link. You can also download it as an HTML file or PDF, or export the document as JSON to keep or move. Publishing again updates the same address, and you can take it down at any time.

The **Portfolio Index** at <https://auricartisan.com/portfolios/> lists portfolios in one place — those made with the builder and those people keep on their own sites — searchable by name, craft, place and colour. A builder portfolio joins it when you publish (unless you switch that off); a portfolio on your own site can be added through the Search Console.

Who it is for

- Designers, illustrators, photographers and developers who want a portfolio without building a website.
- Anyone who wants to show palettes, gradients and scales they made on Auric Artisan as live, copyable values.
- People who want a CV-style page, a studio one-pager or a simple link page.
- Visitors looking for designers by craft, place or colour.

Where to find it

- The builder: <https://auricartisan.com/portfolio/> (also in the **Tools** menu and on the Collections page as **Portfolio Builder**).
- Published portfolios: <https://auricartisan.com/p/> followed by the owner's address.
- The directory: <https://auricartisan.com/portfolios/>
- You need an Auric Artisan account, signed in, to build and publish. Viewing portfolios and the directory needs no account.

Quick start

1. Sign in and open <https://auricartisan.com/portfolio/>.
2. Select **Templates**, pick one (for example **Designer**) and select **Use this template**.

3. Fill in the **Header**: your name, headline and the details you want to show.
 4. Click any text in the live preview and type over the examples.
 5. Open **Style** and choose a typeface, paper, rhythm and accent.
 6. Open **Check** and fix anything marked blocking.
 7. Select **Publish**, choose **Public at an address**, type your address and select **Publish**.
 8. Copy the address and share it.
-

What you can do

- Build a page from 25 section types, and type directly into the preview.
 - Start from eight templates: Designer, Developer, Photographer, Freelancer, Founder, Writer, Resume and Minimal.
 - Write in Markdown, or paste your own HTML and CSS into a sanitised Raw HTML section.
 - Show your saved palettes as live swatches visitors can copy as CSS or JSON.
 - Style the page with four typefaces, five papers, three rhythms and a graded accent.
 - Preview at fit, desktop, tablet and mobile widths, and full screen.
 - Audit contrast, links, alt text, headings and target sizes before publishing.
 - Undo and redo; your draft saves itself in the browser and, when signed in, to your account.
 - Export HTML, PDF or JSON; import JSON; copy a snapshot link.
 - Publish at your own address with a QR code, a share card, a view count and control over search, the index and PDF downloads.
 - Find portfolios in the Portfolio Index, and list yours — including one you host elsewhere.
-

In this folder

- [others/](#) — glossary, shortcuts, limits, related pages and privacy.

WEBSITE > PORTFOLIO

Portfolio documentation

Task guides, reference, troubleshooting and FAQ for the Portfolio Builder and the Portfolio Index.

The builder

File	What it covers
getting-started.md	Signing in, a tour of the builder and a first portfolio.
templates.md	The eight templates and what each contains.
manage-sections.md	Adding, ordering, hiding, duplicating and deleting sections; bulk actions.
section-types.md	All 25 section types and every field they have.
edit-in-the-preview.md	Typing into the live preview, the section rail and the row controls.
markdown-and-raw-html.md	What Markdown the builder understands, and what Raw HTML allows and removes.
header-and-avatar.md	The Header panel, following your profile, and choosing an avatar.
style-and-theme.md	Typeface, paper, rhythm and accent.
preview-and-check.md	Preview widths, full screen, full preview, and the Check pane.
save-undo-and-sync.md	Autosave, draft sync to your account, undo and redo.
export-and-import.md	HTML, PDF, JSON, import, snapshot links and the credit line.
publish-and-share.md	The publish dialog, your address, sharing, updating and unpublishing.
the-published-page.md	What visitors see at your address and at a snapshot link.

The Portfolio Index

File	What it covers
portfolio-index.md	Browsing, searching and filtering https://auricartisan.com/portfolios/ .
list-your-portfolio.md	Joining the index with a builder portfolio or one you host elsewhere, and managing your entries.

Reference and help

File	What it covers
reference.md	Every control, option, command, message and limit.
troubleshooting.md	Symptoms, causes and fixes.
faq.md	Short answers.

Back to the [Portfolio overview](#).

WEBSITE > PORTFOLIO

Getting started

Sign in, learn the builder's screen, and build and publish a first portfolio.

Sign in

Open <https://auricartisan.com/portfolio/>. If you are not signed in, the page shows **Sign in to build your portfolio** — "Sign in to add sections, write in Markdown or HTML, showcase your work, and publish or export your portfolio." — with a **Sign In** button. Sign in, and the builder opens. For accounts and signing in, see [Account and billing](#).

A tour of the screen

The top bar

Part	What it does
Your portfolio and an address	Your published address, for example <code>auricartisan.com/p/your-name</code> , and Not published until it is live.
Command field — "Add a section, change the look, publish..." (Ctrl K)	Opens a searchable list of everything the builder can do. Type a few letters and press Enter .
Section count and Saved	How many sections the page has, and whether your latest change is saved.
Undo and Redo	Step back and forward through changes.
Templates	Start from a ready-made layout.
Preview	Open the finished page in a new tab.
Export	Download HTML or PDF, export or import JSON, copy a snapshot link, and the credit-line switch.
Publish	Open the publish dialog.

On narrower screens, **Templates**, **Preview** and **Export** may be tucked away; the command field still reaches them.

The mode tabs

- **Content** — the Header panel and your sections.
- **Style** — typeface, paper, rhythm and accent.
- **Check** — an accessibility audit of the page. A dot appears on the tab when it has something to say.

The Content column

- **Header** — the top of your portfolio: name, headline, email, location, website, avatar and accent. See [Header and avatar](#).
- Your sections, one card each, with controls to move, hide, duplicate and delete. See [Manage sections](#).
- **Add a section** — a searchable set of all 25 section types.

The live preview

On the right (or below, on narrow screens), **Live preview** shows the page as visitors will see it. You can type straight into it; see [Edit in the preview](#). Its bar has width buttons (**Fit**, desktop, tablet, mobile), the current width and section count, and a full-screen button.

Your first portfolio

1. Select **Templates**. The **Start from a template** dialog opens.
2. Choose **Designer** and select **Use this template**. The page fills with example sections.
3. In **Header**, type your **Name** and a **Headline / tagline**. Leave fields blank to use your profile details.
4. In the preview, click the **Selected Work** heading and any example text, and type your own.
5. Open **Style**, choose a **Typeface** and **Paper**, and pick an accent from your palettes.
6. Open **Check**. If it lists anything as **Blocking**, fix it; the **Publish** button stays disabled until you do.
7. Select **Publish**. Choose **Public at an address**, type an address in **Your address** and wait for it to be confirmed as available.
8. Select **Publish**. The dialog shows your live address with **Copy**, **Open** and **QR code**.

Result: your portfolio is live at [auricartisan.com/p/](#) plus your address, and by default it is listed in the [Portfolio Index](#).

WEBSITE > PORTFOLIO

Edit in the preview

Type directly into the live preview, use the section rail and row controls, and add sections in place.

The live preview is not only a picture of your page: you can write in it. Click a heading and type; the change is saved and appears everywhere the portfolio goes.

Type into the page

1. Hover over text in the preview. Editable text shows a faint outline.
2. Click it. A coloured outline shows you are editing.
3. Type. Empty fields show grey example text until you fill them.
4. Finish:
 - **Enter** finishes a one-line field (a heading, a name, a button label).

- In longer fields (quotes, descriptions, code, Markdown), **Enter** starts a new line; click elsewhere to finish.
- **Escape** finishes too.

Pasting into a plain field pastes text only, without formatting.

What can be typed in the page

Section	Editable in the page
Heading	The heading text
Text / Markdown	The whole text (kept as Markdown)
Two columns	Each column (kept as Markdown)
Quote	The quote and the attribution
Testimonial	The quote, name and role
Callout	The text (kept as Markdown)
Button	The label
Call to action	The heading, text and button label
Image	The caption
Code	The code
Skills / Tags	The title
Timeline	The title, and each entry's date, title, subtitle and description
Stats	The title, and each metric's value and label
Feature list	The title, and each feature's title and description
Steps	The title, and each step's title and description
FAQ / Accordion	The title, and each question and answer

Everything else — image addresses, embeds, tables, links, alignment, tone, columns, which palettes to show — is a choice rather than words, so it lives on the section's card. Clicking such a section in the preview selects it and opens its card in the Content column, ready to edit.

Buttons and links in the preview do not navigate while you are building; clicking one means "edit this".

The section rail

When you select a section in the preview, a small rail of buttons appears beside it:

Button	What it does
Add a section below	Opens a searchable list of section types and inserts your choice after this section.
Open this section in the panel	Opens its card in the Content column.
Move this section up / Move this section down	Reorders it.
Hide from the page	Hides the section (it stays in your draft).
Remove this section	Deletes it (undoable).

Row controls

In Timeline, Stats, Feature list, Steps and FAQ sections, selecting a row shows row controls instead:

Button	What it does
Add an entry after this one	Inserts a new row below.
Move this entry up / Move this entry down	Reorders the row.
Remove this entry	Deletes the row.

In a timeline sorted **Newest first** or grouped by year, rows appear in the displayed order; moving and adding still act on the entry you selected.

Add a section at the end

At the bottom of the page, a dashed **Add a section** button opens the same searchable list. Type to narrow it, press **Enter** to add the first match, or **Escape** to close.

Result

You can build most of the page by typing into it, and reach every other option through the section's card.

WEBSITE > PORTFOLIO

Export and import

Download your portfolio as HTML or PDF, export and import the JSON document, copy a snapshot link, and control the credit line.

Select **Export** in the top bar to open the menu. Each item is also a command in the command field.

Menu item	What you get	Message
Download HTML	A single, self-contained <code>.html</code> file of the finished page, including its styles and the live palette swatches. Open it in any browser or host it anywhere.	HTML downloaded.
Download PDF	Opens the page in a new tab and your browser's print dialog; choose Save as PDF (or your browser's equivalent) there.	—
Export JSON	The portfolio document as a <code>.json</code> file: header, sections and style. Use it as a backup or to move the portfolio.	Portfolio JSON exported.
Import JSON...	Pick a <code>.json</code> file exported from the builder. It replaces your current portfolio (undoable).	Portfolio imported. or That file is not a valid portfolio export.
Copy snapshot link	A link that contains the whole portfolio.	Public link copied

File names are based on your name.

The credit line

At the foot of the menu, the switch "**Made with Auric Artisan**" credit — "On every exported HTML and PDF. Paid plans can drop it." — adds a small "Made with Auric Artisan" line at the end of exported files.

- On a paid plan that includes watermark-free exports, you can switch it off.
- On a free plan, switching it off explains that watermark-free exports are a paid perk; the portfolio, the editor and every export stay free. See [Account and billing](#).

The switch affects downloads only, not your published page.

Printing and PDF

The PDF comes from your browser's print function. The page is set to print its colours and background exactly; if your browser still drops backgrounds, turn on its "Background graphics" option. If nothing opens, the builder says **Allow pop-ups to print**.

Snapshot links

A snapshot link carries the entire portfolio inside the address itself (after `#`). Opening it shows the page at <https://auricartisan.com/portfolio/public/> without any account.

- It is a copy taken at that moment: later edits do not change it.
- It works without a published address, and keeps working offline once opened.
- Portfolios with several embedded images make very long links, which some apps and sites will not accept. A large avatar is left out of snapshot links.
- Nothing is stored on the site.

See [The published page](#) for what a visitor sees.

Result

You have your portfolio as a file you can host or print, a JSON backup you can restore, or a link that works anywhere.

WEBSITE > PORTFOLIO

Header and avatar

Fill in the portfolio header, follow your profile or override it, choose what to show, and set an avatar.

The **Header** panel at the top of the Content column controls the top of your portfolio: "The top of your portfolio. Leave a field blank to follow your profile."

The fields

Field	Limit	Show switch	Notes
Name	80 characters	Always shown	Blank follows your profile's display name.
Headline / tagline	120 characters	Always shown	Also used on your share card.
Email	120 characters	Show — off by default	The address you publish can differ from the one you sign in with.
Location	80 characters	Show — on by default	Placeholder "City, Country".
Website	200 characters	Show — on by default	—
Avatar (image address)	500 characters	Show — on by default	Or pick a picture (below).
Accent	A colour picker	—	The page's accent colour, also set from Style .

Following your profile

A blank field is not "no value" — it means "use my profile". The profile's value appears as grey placeholder text in the empty field, so you can see what the page will say. Type into the field to use a different value just for your portfolio; clear it to go back to following your profile. Changes to your profile then reach the portfolio automatically.

A **Show** switch that is off keeps that detail off the page, off exports and out of anything you publish or share, even if the field has a value.

Use the built-in header

The **Use the built-in header** switch turns the whole header block (name, avatar, headline and details) on or off. Turn it off when your page has its own opening — for example a Raw HTML hero — so it is not preceded by a second one. While it is off, the Avatar, Location and Email switches are greyed out.

Choose an avatar

1. Double-click the avatar circle in the Header panel, or double-click your picture in the preview ("Double-click to choose a picture").
2. Pick an image file.
3. The builder resizes it to a small square, stores it inside your portfolio and confirms **Avatar updated**.

Because the picture is stored in the portfolio, it travels with every export, snapshot link and publish. Resizing also removes hidden photo information (such as camera and location data) from the file.

Messages you may see:

- **Turn the built-in header on first.** — the header is switched off.
- **That picture is too large even shrunk. Try a smaller one.**
- **That file could not be read as a picture.**

You can also paste an image address into **Avatar** instead. With no avatar, the page shows your initial.

Note: A snapshot link has little room, so a large avatar is left out of snapshot links (the initial is shown instead). Published pages keep it.

Result

The top of your portfolio says exactly who you are, with only the details you chose to show.

WEBSITE > PORTFOLIO

List your portfolio

Put a builder portfolio or a portfolio on your own site into the Portfolio Index, check its status, change it or take it out.

There are two ways into the **Portfolio Index**: publish with the Portfolio Builder, or add a portfolio you keep on your own site through the Search Console.

A portfolio made with the builder

1. Publish your portfolio at an address (see [Publish and share](#)).
2. In the publish dialog's settings, keep **Let search engines list it** and **List it in the Portfolio Index** switched on (both are on by default).
3. Wait a little: builder portfolios are copied into the index within fifteen minutes of publishing.

It joins as **Made here**, with its palette, crafts and headline. Changes you publish later are copied in the same way.

To leave the index, switch off **List it in the Portfolio Index** (or **Let search engines list it**) and select **Publish these changes**. Unpublishing also removes it.

A portfolio on your own site

You add these in the Search Console's **Portfolios** tab at <https://auricartisan.com/search/console/#portfolios> (the **Add one you host** button on the index goes there). You need to be signed in.

1. Open the **Portfolios** tab. It lists **Made with the Portfolio Builder** and **Kept on your own sites**.
2. Under **Add a portfolio you keep elsewhere**, fill in:

Field	Required	Notes
Address	Yes	For example https://yourname.com/work/ .
Name	Yes	Yours, or the studio's. Up to 120 characters.
Where you work	No	City, country. Up to 80 characters.
One line about the work	No	Up to 200 characters.
Craft	No	Comma between, up to 8.
Colours you work in	No	Hex codes, up to 8. Swatches preview them.
What people will find it by	No	A few sentences, up to 600 characters.

3. Select **Add it**.

What happens next depends on the address:

- **On a site you have verified** in the Search Console's **Your sites** tab: "Verified: ... is proved to be yours, so it goes into the index straight away." It appears with a **Verified** mark.
- **On any other site**: "Not a site you have verified here, so a person reviews it before it appears." It shows as **Waiting for review** until a reviewer approves it, and then appears as **Reviewed**.

To get the Verified mark, verify your site first. See the [Search documentation](#) for how to prove you own a site.

There is a limit to how many portfolios one account can add: "That is as many as one account can add. Take one out to add another."

Check your entries

The **Portfolios** tab shows each entry with its status:

Status	Meaning
In the index	Listed and searchable.
Verified	On a site you have proved is yours.
Waiting for review	Someone will check it before it appears.
Featured	Chosen to be shown first.
Hidden by a moderator	Removed from view by a reviewer; a "Reviewer's reason" may be shown.
Not in the index / Not listed	Not currently listed.
Joining on the next copy	A builder portfolio that will appear at the next copy.

For your builder portfolio, the tab also explains why it might not be listed — for example that you switched off **List it in the Portfolio Index**, or that it asks search engines not to list it — with **Change it in the builder**.

Change or remove an external entry

- Select **Change** on the entry, edit the fields, and select **Save changes** (or **Cancel**). Edits to an entry that is not on a verified site go back for review.
- Select **Take it out** to remove it: "It leaves the index now." You can keep it instead with **Keep it**.

Result

Your portfolio is in the index, marked Verified if you proved the site is yours, and you can see its status and change or remove it at any time.

WEBSITE > PORTFOLIO

Manage sections

Add, open, reorder, hide, duplicate and delete sections, and use the bulk actions.

A portfolio is a stack of **sections**, shown top to bottom in the order you set. Each section has a card in the **Content** column.

Add a section

Any of these adds one:

- **Add a section** at the foot of the Content column: type in **Search sections...** to narrow the 25 types, then select a tile. Each tile shows the type's name and a short hint; hover for the hint. If nothing matches, it says **No sections match that search**. The builder confirms, for example, **Added a Timeline section**.
- In the preview, the add control at the end of the page, or **Add a section below** on a section's rail (see [Edit in the preview](#)).
- The command field: type "add" and choose, for example, **Add a Gallery section**.

New sections start empty; grey example text (placeholders) shows what goes where, and disappears as you type. With no sections yet, the column says **No sections yet — add one below to start building**.

The section card

Control	What it does
Drag handle (::)	Drag to reorder ("Drag to reorder").
Chevron (▼)	Expand or collapse the card's fields.
Type icon and name	Which kind of section it is.
Hidden badge	Shown when the section is hidden from the portfolio.
Eye button	Hide from portfolio / Show in portfolio . Hidden sections stay in your draft but are left out of the page, exports and publishing.
↑ / ↓	Move up / Move down .
More actions (…)	Move to top , Move to bottom , Duplicate , Delete .

Messages confirm actions, such as **Section duplicated**. and **Section removed — Ctrl+Z to undo**.

Bulk actions

Above the cards, a bar shows the section count, **Collapse all** (or **Expand all**) and **Bulk actions ▼**:

Action	Effect	Message
Expand all	Opens every card.	All sections expanded.
Collapse all	Closes every card.	All sections collapsed.
Show all sections	Un-hides every section.	All sections shown in the portfolio.
Hide all sections	Hides every section.	All sections hidden from the portfolio.
Reverse order	Flips the order.	Section order reversed.
Clear all sections	Deletes every section.	All sections cleared — Ctrl+Z to undo.

Every bulk action can be undone.

Tips

- Hide a section instead of deleting it when you might want it back later.
- A page where every section is hidden cannot be meaningfully published; the publish dialog warns **Every section is hidden — the page would be empty**.
- The section count in the top bar and in the preview bar counts all sections, hidden or not.

Result

Your sections are in the order you want, with the ones you are not ready to show hidden.

WEBSITE > PORTFOLIO

Markdown and Raw HTML

The Markdown the Portfolio Builder understands, and what a Raw HTML section keeps and removes.

Markdown

Markdown is a simple way to format text with ordinary characters: **bold**, # Heading, - item. The **Text / Markdown**, **Two columns**, **Callout** and **FAQ** answer fields accept it.

You type	You get
# Heading to ##### Heading	Headings, levels 1 to 6
bold , <i>italic</i>	Bold, italic
[label](https://example.com)	A link
[label](https://example.com "Title")	A link with a title
<https://example.com> or a bare https://example.com	A link
![alt text](https://example.com/pic.png)	An image
`code`	Inline code
A line of three or more -, * or _	A horizontal rule
> quoted	A block quote (quotes can contain other Markdown)
- item or 1. item, indented for sub-items	Lists, including nested lists
- [] task, - [x] done	Task lists, shown as ticked or unticked boxes that visitors cannot change

You type	You get
A pipe table with a <code>---</code> row, and <code>:---</code> for alignment	A table; wide tables scroll sideways
Three backticks, optionally followed by a language	A code block

Tips:

- Links and images need full `https://` addresses. An address with spaces can be wrapped in angle brackets: `<https://example.com/my file.png>`.
- Images from other websites load on your published page as long as they are served over `https://`.
- A line break inside a paragraph is kept as a line break.

Raw HTML

The **Raw HTML** section lets you paste your own markup and styles. Because your published page is opened by strangers, the builder cleans the HTML first.

Kept

- Page structure: `div`, `span`, `section`, `article`, `header`, `footer`, `main`, `nav`, `aside`, `figure`, `details` and `summary`, headings, paragraphs, lists, tables, `hr`.
- Text markup: `strong`, `em`, `code`, `pre`, `blockquote`, `mark`, `small`, `sub`, `sup`, `abbr`, `time`, `kbd` and similar.
- Media: `img`, `picture`, `source`, `video`, `audio`, `track`; also `progress` and `meter`.
- Inline SVG for icons and diagrams: shapes, paths, text, gradients, masks and clip paths.
- Attributes: `class`, `id`, `style`, `role`, `aria-*`, `data-*`, `title`, `lang` and each element's usual attributes (such as `href`, `src`, `alt`).
- `<style>` blocks. The CSS is rewritten so it only affects this one section: it cannot restyle other sections or the site around your page. `@import` is allowed only for Google Fonts.

Removed

- `<script>` and every event attribute such as `onclick`.
- `<iframe>`, `<object>`, `<embed>`. Use the **Embed** section for videos and prototypes.
- Forms and form controls: `form`, `input`, `button`, `textarea`, `select` and so on.
- `link`, `meta` and `base` elements.
- `javascript:` addresses anywhere, including inside CSS.
- `position: fixed` and `position: sticky`, so a section cannot cover the site's own header.
- SVG features that can fetch or run things, such as `use`, `foreignObject`, `image` and animation elements.

The section's help text sums it up: "Styles, SVG and page structure all work. Scripts, iframes and forms are removed — your page is opened by strangers. A `<style>` block only reaches this section."

Example

```
<style>
.intro { padding: 32px; background: linear-gradient(135deg, #1d2a3e, #3f6fd1); color: #fff; border-radius: 16px;
}
.intro h2 { margin: 0 0 8px; }
</style>
<div class="intro">
  <h2>Hello</h2>
  <p>I design colour systems for small brands.</p>
</div>
```

Tip: For a full-bleed design drawn entirely in Raw HTML, choose the **No background** paper in **Style** so no sheet or padding shows around it.

WEBSITE > PORTFOLIO

The Portfolio Index

Browse, search and filter the Portfolio Index by name, craft, place and colour, and share a search.

The Portfolio Index at <https://auricartisan.com/portfolios/> is "Every portfolio, in one place": portfolios made with the Portfolio Builder and portfolios people keep on their own sites, "searched together by name, craft, place and colour". Anyone can browse it; no account is needed.

The page

- The heading, with **Publish yours** (opens the Portfolio Builder) and **Add one you host** (opens the Search Console's Portfolios tab).
- Four counts: **In the index**, **Made here**, **From elsewhere**, **Verified**.
- The search box.
- Source buttons, **Filters**, the results, and **How a portfolio gets in**.

Search

Type into **Search by name, craft, place or a colour like #d3af37**, or press **/** anywhere on the page to jump to it. Results update as you type; **Escape** clears the box.

Words are matched against names, headlines, crafts, places and descriptions, with allowance for typing mistakes and word beginnings. You can also use:

You type	It means
"exact words"	Those words together, in that order.

You type	It means
<code>-word</code>	Leave out results with that word.
A hex colour such as <code>#d3af37</code>	Portfolios whose colours are nearest to it come first (colours are compared perceptually, in OKLab).
<code>tag:branding</code> or <code>tag:"brand identity"</code>	A craft.
<code>in:lisbon</code>	A place.
<code>made:here</code> / <code>made:elsewhere</code>	Builder portfolios / portfolios on other sites.
<code>is:verified</code> or <code>verified</code>	Verified portfolios only.

Under the box, **Try** offers example tokens — such as `made:here`, `is:verified` and a colour — built from what is in the index; select one to put it in the box.

Filter

Control	Options
Source buttons	All , Made here , Elsewhere , each with a count.
Filters	Opens the filter row; a number shows how many are on.
Verified only	Only portfolios whose owner proved the site is theirs.
Colour	Colour family : Red, Orange, Yellow, Green, Teal, Blue, Violet, Pink, Neutral.
Craft	The crafts in the index (• none yet when there are none).
Location	The places in the index.

Every count reflects your other filters, so you can see what each choice would leave. Active filters are shown as removable chips.

Sort and view

Sort	Order
Best match	By relevance to your search.
Recently updated	Featured portfolios first, then most recently updated.
Newest	Newest first.
Name, A to Z	Alphabetical.
Most viewed	Most viewed first.

Grid and **List** switch the layout. In the grid, a featured portfolio at the top gets a larger spotlight card.

The cards

Each card shows the portfolio's colours as a cover, its source (**Made here** or **Elsewhere**), a **Verified** mark ("The owner proved it is theirs") or **Reviewed** for a checked external entry, an avatar or initials, the name and place, the headline, up to four crafts, where it lives, when it was updated, and **Open portfolio**. External portfolios open in a new tab. The list view shows the same facts in a row.

Results come 24 at a time; **Show N more of M** loads the next batch.

Messages

Message	Meaning
Loading the index...	The index is loading.
"N portfolios" (and "for" your search)	The number of results.
Nothing matches your search / No portfolios match these filters	Loosen the search or filters.
The index is empty so far.	No portfolios have been listed yet.
The index is new. The first few get the front row.	Only a few portfolios are listed.
The portfolio index could not be reached	The page could not load the index; try again later.

Share a search

The address of the page updates with your search, filters, sort and view, so you can copy it to share exactly what you are looking at, and the browser's Back button steps back through your changes.

How a portfolio gets in

The page explains three steps:

1. **Publish, or add an address** — "Builder portfolios are copied in within fifteen minutes of publishing. Portfolios on other sites are added in the Search Console."
2. **Proof lists it at once** — an address on a site you have verified goes in straight away, marked Verified; anything else waits for someone on the Auric Artisan team to review it.
3. **Found by what it holds** — name, craft, place and colour.

"Leave whenever you like: switch off "List it in the Portfolio Index" the next time you publish." See [List your portfolio](#).

The index is searched in your browser and needs JavaScript. Without it, every builder portfolio is still at its own address.

WEBSITE > PORTFOLIO

Preview and check

Preview your portfolio at different widths and full screen, and use the Check pane to fix accessibility problems before publishing.

Preview widths

The **Live preview** bar has four width buttons:

Button	Width	Use
Fit (default)	The width of the preview column, at full size	Writing and editing.
Desktop	1160 px	Checking the desktop layout.
Tablet	800 px	Checking a tablet layout.
Mobile	390 px	Checking a phone layout.

The bar shows the current width (for example **Desktop • 1160px**) and the number of sections. Desktop, Tablet and Mobile may be scaled down to fit the column; Fit is the width to write at. The builder remembers your choice in this browser.

Fullscreen preview (the button at the right of the bar) enlarges the preview to fill the screen; select it again, or press **Escape**, to leave.

Full preview in a new tab

Select **Preview** in the top bar (or the command **Open a full preview**). The finished page opens in a new tab, exactly as an exported HTML file would look. If nothing opens, the builder says **Allow pop-ups to preview**. — allow pop-ups for auricartisan.com.

The Check pane

Open **Check**. It audits the page as it is actually rendered — the colours, sizes and text a visitor will get — against WCAG 2.2 AA.

What it checks

Finding	Severity	What it means	The fix it suggests
Text below AA	Blocking when well below; otherwise a warning	Normal text is under 4.5:1 against its background.	"Take a darker step from the same palette in Style, or change the paper."

Finding	Severity	What it means	The fix it suggests
Large text below AA	Blocking when well below; otherwise a warning	Large text (24 px, or about 19 px bold) is under 3:1.	"Deepen this colour, or set the text larger so the 3:1 threshold applies."
A link with no text	Blocking	A link with nothing readable inside it.	"Give it text, or an aria-label if it is deliberately an icon."
A link that does not say where it goes	Blocking	Link text such as "click here", "here", "read more", "more", "link", "this", "learn more" or "see more".	"Name the destination in the link itself."
An image with no alt text	Blocking	An image with no description for screen readers.	"Describe what the image shows, or set alt="" if it is decoration."
Heading jumps from hN to hM	Warning	A heading level is skipped, for example h2 to h4.	"Make this an h3, or add the level it skipped."
A target smaller than 24px	Warning	A link or button smaller than 24 × 24 pixels.	"Give it padding, or set a minimum height."
A colour this check could not read	Warning	Text in a colour format the check does not measure (for example from Raw HTML).	"Pick this colour from the Style pane, which works in sRGB and is graded."

Each finding explains why it matters and names the section it is in. Contrast findings show the colour pair and ratio, for example "#9A8F7B on #FBFAF7 is 3.05:1".

Using the pane

1. Read the summary: how many faults, in how many places, and how many would stop the page going online — or "None of them blocks publishing."
2. When there are several kinds, use the filter chips **All**, **Blocking** and **Contrast**.
3. Select a finding. The preview scrolls to it and outlines the element.
4. Fix it in the section card, the preview, or **Style**. The pane updates.

When everything passes, it says the pairs checked "against WCAG 2.2 AA. Nothing to fix." If the preview has not rendered yet, it says **The preview has not rendered yet.**

Blocking findings stop publishing

While any **Blocking** finding remains, the **Publish** button is disabled and its tooltip says, for example, "2 things to fix in Check before this can go online". Warnings do not block publishing. Saving and exporting are never blocked.

While you work in **Content**, a dot on the **Check** tab tells you there is something to look at.

Result

You have seen the page at every width, and it goes online without contrast, link, alt-text or heading problems.

WEBSITE > PORTFOLIO

Publish and share

Publish your portfolio at your own address or as a private link, update it, control search, the index, PDF and views, and unpublish.

Select **Publish** in the top bar. The dialog, headed **Portfolio** and **Put this online**, shows **Not published** until your page is live.

If **Publish** is greyed out, the **Check** pane has blocking findings to fix first; see [Preview and check](#).

Choose who can see it

Choice	What it means
Public at an address	"Anyone with the link can open it, and it stays current — publish again and the same address shows the new version."
Only people I send the link to	"No address on the site, and search engines never see it." The builder gives you a snapshot link instead: "The link is the portfolio" — it needs no account, works offline, never updates, and can be too long to paste in some places if the page has several images.

Publish at an address

1. Choose **Public at an address**.
2. In **Your address**, after `auricartisan.com/p/`, type the name you want.
 - Lower case letters, numbers and hyphens, 2 to 31 characters.
 - While you type, the field says **Checking...**, then whether the address is available; a tick shows when it is yours to take.
 - Under the field, **Or take** offers suggestions based on your name.
3. Look at the side panel:
 - **What a shared link shows** — the card people see when your address is shared in a chat or social app: your name, headline and avatar, "Drawn from your header, and refreshed every time you publish."
 - **Ready to go** — a checklist: **Address is yours to take**, how many sections will be published, **Name is set**, **Headline is set**. A missing item says what to do, for example **A headline is what the share card shows**.

4. Select **Publish** (it reads **Publishing...**). The line under it says "It goes live at once, and you can take it down whenever."
5. The builder confirms **Published at** and your address.

When it is live

The dialog title becomes **Live since** and the date, and shows:

Part	What it does
Your address	For example <code>auricartisan.com/p/your-name</code> .
Copy	Copies the address (Copied).
Open	Opens the live page.
QR code / Hide code	Shows a QR code "For a slide or a card" that "Points at the same address, so it keeps working after you republish."
Since you published	"This is exactly what visitors are seeing." — or "You have edits here that are not published yet." / "You have changed a setting that is not published yet."
Publish these changes	Appears when there is something new to publish. Updates the live page at the same address.
Reach	The number of views and "views since" the date you published — "Counted as a number and nothing else — no visitor records, no addresses."

The top bar also shows your address and whether it is live.

Settings

Select **Search, the Portfolio Index, PDF and views** to open the switches. A summary beside it reads, for example, "In search · In the index · ...".

Switch	Default	What it does
Let search engines list it	On	Off keeps it out of Google while the link still works for anyone you send it to.
List it in the Portfolio Index	On	Lists it at https://auricartisan.com/portfolios/ , "searchable by craft, place and colour". Needs Let search engines list it on.
Allow a PDF download	On	Visitors get a PDF button for a print-clean copy of the page.
Show the view count	On	Shows views at the foot of the page. You always see the count in the dialog.

Change a switch, then select **Publish these changes** for it to take effect.

Take it down

Under **Take it down**: "The address stops working at once. It also becomes free for someone else to take — so if you might come back, leave it up and switch off the search listing instead."

1. Select **Unpublish**. It changes to **Yes, take it down** for a few seconds.
2. Select **Yes, take it down** to confirm.
3. The builder confirms **Unpublished. The address no longer shows anything**.

Your draft stays in the builder; you can publish again later, at the same address if it is still free.

Share a private link

1. Choose **Only people I send the link to**.
2. Select **Copy the link**. "Nothing is stored on the site."
3. Paste the link to the people you choose.

Close

Select **Close** (or press **Escape**).

Result

Your portfolio is live at your own address, or shared privately, and you control whether search engines, the Portfolio Index and PDF downloads can reach it.

WEBSITE > PORTFOLIO

Save, undo and sync

How the Portfolio Builder saves your draft, keeps it on your account, and lets you undo and redo.

Autosave

There is no Save button. Every change is saved automatically. The top bar shows the state:

Label	Meaning
Saved	Kept in this browser. Tooltip: "Kept in this browser. Sign in and it follows you."
Saved to your account	Kept in this browser and on your account. Tooltip: "Kept in this browser and on your account".

Saving your draft never changes what visitors see. Only **Publish** does that.

Draft sync

When you are signed in, your draft is also kept on your account, so it follows you to another browser or device.

- Open the builder on another device and it loads the newer copy: **Loaded your portfolio from your account.** (when this browser had nothing) or **Loaded the newer draft from your account.**
- A brand-new, untouched starter page never overwrites real work on your account.
- The builder does not replace a draft you are in the middle of editing.
- If the account copy cannot be reached, the builder keeps working in this browser and tries again later.

Undo and redo

- Select Undo or Redo in the top bar ("Undo (Ctrl+Z)", "Redo (Ctrl+Shift+Z)"), or use the commands **Undo** and **Redo** in the command field.
- Undo covers adding, editing, moving, hiding, duplicating and deleting sections, bulk actions, templates and imports.
- The buttons are greyed out when there is nothing to undo or redo.

Many messages remind you, for example **Section removed — Ctrl+Z to undo.**

Keep a copy yourself

To keep a backup or move a portfolio between accounts, use **Export > Export JSON**, and **Import JSON...** to bring it back. See [Export and import](#).

Result

Your work is never lost to a closed tab, follows you when you are signed in, and any change can be taken back.

[WEBSITE](#) > [PORTFOLIO](#)

Section types

All 25 section types in the Portfolio Builder and every field and option each one has.

The **Add a section** panel offers 25 types, in this order. Each entry lists the tile's hint and every field on the section's card. Fields marked "Markdown" accept the Markdown described in [Markdown and Raw HTML](#).

Text and structure

Heading — "Section title"

Field	Values	Default
Text	Any text	Empty
Size	H1, H2, H3	H2
Align	Left, Center, Right	Left

Text / Markdown — "Rich text with Markdown"

Field	Values
Markdown	Markdown text. "Supports headings, bold/italic, links, images, lists, quotes, code."

Raw HTML — "Paste custom HTML (sanitised)"

Field	Values
HTML	Your HTML, including <code><style></code> . "Styles, SVG and page structure all work. Scripts, iframes and forms are removed — your page is opened by strangers. A <code><style></code> block only reaches this section."

Two columns — "Side-by-side Markdown"

Field	Values
Left column (Markdown)	Markdown
Right column (Markdown)	Markdown

Images and media

Image — "A single image"

Field	Values	Default
Image URL	An <code>https://</code> address	Empty
Or upload (Choose image)	An image file from your device	—
Alt text	A description for screen readers	Empty
Caption	Text under the image	Empty
Width	Full, Half, Small	Full
Links to	An optional address the image opens	Empty

Uploaded images are stored inside the portfolio itself, which makes it larger (see [Limits and accuracy](#)).

Gallery — "A grid of images"

Field	Values	Default
Columns	2, 3, 4	3
Image list	One address per row; ✕ removes a row	Empty
+ Add image	Adds an empty row	—
Upload images	Several files at once	—

Embed — "YouTube, Vimeo, CodePen, Figma..."

Field	Values
Embed URL	A YouTube, Vimeo, CodePen, Figma, Spotify, SoundCloud, Google or CodeSandbox link. "Only trusted embed hosts are allowed."

YouTube and Vimeo page links are converted to their player addresses automatically. Other links must be `https://` addresses on one of those services.

Video (MP4) — "A self-hosted video URL"

Field	Values
MP4 URL	An address of an MP4 or WebM video. Shown with player controls.

Actions and links

Button — "A call-to-action link"

Field	Values	Default
Label	Button text	Empty
URL	<code>https://...</code> or <code>mailto:...</code>	Empty
Style	Solid, Outline	Solid
Align	Left, Center, Right	Left

Call to action — "A banner with a button"

Field	Values
Heading	Banner heading
Text	A line of text

Field	Values
Button label	Button text
Button URL	<code>https://</code> or <code>mailto:</code>

Link list — "Social / contact links"

Field	Values	Default
Title	A heading for the list	Find me
Links	A label and an address per row; X removes	One empty row
+ Add link	Adds a row	—

Links without a label are not shown.

Your work

Work / Projects — "Showcase your library assets"

Field	Values	Default
Title	A heading	Selected work
Show	All library assets, None (placeholder)	All library assets
Max	3, 6, 9, 12	6

The card tells you how many assets it found in your Library. Each item in the section shows up to six colours of a saved palette as swatches labelled with their hex codes, the item's name and the tool it came from. Visitors can select a swatch to read it against the page, and copy the palette with **CSS** or **JSON**. When you publish or copy a snapshot link, the builder stores a copy of the items at that moment, so visitors see your work rather than anything in their own browser. With nothing saved, the section says **Your published work will appear here once you save assets in the Library.**

Skills / Tags — "A row of tags"

Field	Values	Default
Title	A heading	Skills
Tags (comma separated)	For example <code>Colour, Type, Design systems</code>	Empty

Lists

These sections hold rows. Each row has its own fields, and the rows can be added, moved and removed in the card or in the preview.

Stats — "A row of numbers / metrics"

Field	Values
Title	Optional
Metrics	A value and a label per row (for example 50+ and Projects); + Add metric

Feature list — "Icon + title + text cards"

Field	Values	Default
Title	Optional	Empty
Columns	2, 3	3
Features	An icon, a title and a description per row; + Add feature	Three empty rows

Steps — "A numbered process"

Field	Values	Default
Title	A heading	How it works
Steps	A title and a description per row; + Add step . Steps are numbered automatically.	Two empty rows

Timeline — "A life — work, study, awards, projects"

Field	Values	Default
Title	A heading	Experience
Layout	Rail, Compact, Cards	Rail
Group by	Nothing, Year, Decade	Nothing
Order	As listed, Newest first, Oldest first	As listed
Show at first	Everything, 5, then fold, 8, then fold, 12, then fold	Everything
Label each entry with its kind	On or off	On
Entries	Per row: date, title, subtitle, Kind (No kind, Work, Education, Award, Project, Life, Travel), Still going , link, description. + Add entry ; rows can be reordered.	One row

Dates are free text, such as **2022 – Now** or **Summer 1998** ; the builder reads the year out of them for sorting and grouping but always shows what you typed. Sorting uses the end year of a range; grouping uses its start year. Entries without a year keep their place. With a fold, the remaining entries sit under a "N earlier" line that visitors can open.

FAQ / Accordion — "Expandable questions"

Field	Values	Default
Title	A heading	FAQ
Questions	A question and an answer (Markdown) per row; + Add question	One row

Each question opens and closes on the page.

Quotes and notes

Testimonial — "A quote with attribution"

Field	Values
Quote	The testimonial
Name	Who said it
Role / company	Their role

Quote — "A pulled quote or testimonial"

Field	Values
Quote	The quote
Attribution	Who said it

Callout — "A highlighted note"

Field	Values	Default
Tone	Info, Success, Warning, Danger	Info
Icon	Up to four characters, such as an emoji	A light-bulb emoji when empty
Text (Markdown)	The note	Empty

Data and code

Table — "A simple data table"

Field	Values
Title	Optional
Headers (comma separated)	For example <code>Plan, Price, Seats</code>

Field	Values
Rows (comma per cell, one row per line)	For example <code>Starter, \$9, 1</code> on one line and <code>Pro, \$29, 5</code> on the next

Wide tables scroll sideways on narrow screens.

Code — "A code snippet"

Field	Values
Language	For example <code>js</code> , <code>css</code> , <code>html</code>
Code	The code, shown exactly as typed

Spacing

Divider — "A horizontal rule"

No fields. "A simple horizontal divider."

Spacer — "Vertical breathing room"

Field	Values	Default
Size	Small, Medium, Large	Medium

Empty sections

A section with nothing to show displays a short prompt in the preview, such as **Add an image URL or upload a file.**, **Add images to the gallery.**, **Add some metrics.**, **Add timeline entries.**, **Add questions.**, **Add features.**, **Add steps.**, **Add headers and rows.**, **Add an MP4/WebM video URL.** or **Paste a YouTube, Vimeo, CodePen, Figma or Spotify link.**

WEBSITE > PORTFOLIO

Style and theme

Choose a typeface, paper, rhythm and accent for your portfolio, with the accent graded for contrast.

Open the **Style** tab. A portfolio's look is four choices, each from a named, checked set rather than free colour pickers, so the page stays readable.

Typeface

Choice	Headings	Body text
Fraunces (default)	Fraunces (serif)	Manrope (sans-serif)
Newsreader	Newsreader	Newsreader
Space Grotesk	Space Grotesk	Space Grotesk
Manrope	Manrope	Manrope

Paper

The page's background and text colour.

Choice	Background	Notes
Cream (default)	#FBFAF7	Dark text.
White	#FFFFFF	Dark text.
Sand	#F2EDE3	Dark text.
Ink	#14151A	A dark page with light text.
No background	None — "Nothing behind the page"	No fill, padding or rounded corner. Text follows the viewer's own light or dark theme. For pages that draw their own background, such as a Raw HTML hero.

All the greys the page uses for secondary text are chosen to clear AA contrast on each of the four papers.

Rhythm

The spacing and roundness of the page.

Choice	Feel
Tight	Close spacing, square corners.
Even (default)	Moderate spacing, softly rounded.
Airy	Generous spacing, well rounded.

Accent

The accent colours links, headings and buttons. Under **Accent, from your library**, the Style tab lists the palettes and scales you have saved in your Library, newest first, as swatches.

- Each swatch is graded against the paper you chose. Hover to see, for example, "#8A6D16 — 4.70:1 on Cream (AA)".
- Swatches below 4.5:1 are marked as weak ("below AA for text"). You can still pick one, for borders and rules.
- If no step of a palette clears 4.5:1, the pane says "Nothing in this palette clears 4.5:1 on" the paper, and suggests a darker step or a different paper.
- With no saved palettes, it says: **Save a palette from any colour tool and its steps show up here as accents.**

Under the swatches, a line grades your current accent: "Your accent clears AA on" the paper, "at any size", or "Below 4.5:1 on" the paper, with the advice that it is "Fine for a rule or a border, not for words".

You can also set the accent with the colour picker in the Header panel.

Reset

Reset to defaults returns to Fraunces, Cream, Even and the default accent **#8A6D16**.

From the command field

Every choice is also a command: type, for example, "paper" and choose **Paper — Ink**, or "typeface" for **Typeface — Newsreader**.

Result

Your portfolio has a consistent, readable look, and the accent is one you made yourself and know passes contrast.

WEBSITE > PORTFOLIO

Templates

Start a portfolio from one of eight templates, and what each template contains.

A template replaces your sections with a ready-made set of example sections for a kind of portfolio. It does not change your header or your style.

Use a template

1. Select **Templates** in the top bar, or type "template" in the command field and choose **Start from a template**.
2. The **Start from a template** dialog shows eight tiles. Select one; a tick marks it.

3. Select **Use this template**, or **Cancel** (or **Escape**, or click outside the dialog) to leave without changing anything.

The builder confirms, for example, **Designer template applied**. Your previous sections are replaced, but you can bring them back with Undo.

The eight templates

Template	Description (as shown)	Main sections
Designer	Work-first — selected projects, an about section, skills and links.	Selected Work heading, your library work (up to 9), About heading and text, skills, Elsewhere links (Dribbble, Instagram).
Developer	Intro, tech stack, a projects grid and a code snippet.	Intro text, Stack skills, Projects heading and your library work, a code snippet, links (GitHub, Email).
Photographer	Visual-first — a portfolio grid, stats and a booking call-to-action.	Intro text, Portfolio work grid (up to 12), stats (shoots, countries, clients), a Book a session call to action.
Freelancer	Services, a how-we-work process, a testimonial and a CTA.	Intro text, Services features, How we work steps, a testimonial, a Have a project? call to action.
Founder	Startup one-pager — traction stats, features, milestones and contact.	Intro text, Traction stats, What we do features, Milestones timeline, a Want to talk? call to action.
Writer	Selected writing, an about, a pulled quote and links.	Intro text, Selected writing links, About text, a quote, Elsewhere links (Newsletter, Twitter).
Resume	A formal CV — experience, skills, education and contact.	Summary text, Experience timeline, skills, Education timeline, Contact links (Email, LinkedIn).
Minimal	Just a short intro line and a couple of links. Nothing else.	One line of text and links (Email, Twitter).

The example words are placeholders: replace them by typing into the preview or the section cards.

Result

Your page has a full, sensible structure in one step, ready to fill in.

WEBSITE > PORTFOLIO

The published page

What visitors see at a published portfolio address and at a snapshot link.

At your address

A published portfolio lives at <https://auricartisan.com/p/> followed by your address. It opens quickly: the portfolio appears first, and the site's header, footer, cursor and right-click menu arrive a moment later.

Visitors see:

- your header and sections, in your chosen typeface, paper, rhythm and accent;
- your saved palettes in the Work / Projects section as swatches they can select, and copy as **CSS** or **JSON**;
- **Copy link** and, if you allowed it, **PDF**;
- the view count, if you chose to show it.

The right-click menu on a portfolio

On a portfolio page, the site's right-click menu offers actions for readers:

Action	What it does
Copy link to this portfolio	Copies the address.
Save this portfolio as PDF	Opens the print dialog.
Email and the owner's first name	Starts an email, when the portfolio shows an email address.
Reading mode (Alt + R)	Switches the site's reading mode.
Make your own portfolio	Opens the Portfolio Builder.

At a snapshot link

A snapshot link opens <https://auricartisan.com/portfolio/public/> with the portfolio carried in the address. The page shows **Opening portfolio...**, then the portfolio with **Copy link** and **PDF**, and a footer: "Built with Auric Artisan — Colour intelligence, accessibility tools, and a portfolio builder." with **Make your own**.

Messages a visitor may see:

Message	Why
"This page shows a shared portfolio, and this link is missing its data. Ask for a fresh link from the portfolio builder."	The link was cut short.
"This browser cannot decompress the link. Try a current Chrome, Edge, Firefox or Safari."	An old browser.
"This portfolio could not be opened. It may have been built by a newer version of the editor."	The link could not be read.

Result

Visitors get a fast, readable page that works on any device, and a way to copy, save or contact you.

WEBSITE > PORTFOLIO

Portfolio reference

Every control, option, command, message and limit in the Portfolio Builder, the published page and the Portfolio Index.

Top bar (<https://auricartisan.com/portfolio/>)

Control	What it does
Your portfolio , address, Not published	Shows your published address and state.
Command field (Ctrl K)	"Add a section, change the look, publish..." — opens the list of builder commands.
Section count, Saved / Saved to your account	Document size and save state.
Undo / Redo	Step back / forward. Disabled when there is nothing to undo or redo.
Templates	Opens Start from a template .
Preview	Opens the finished page in a new tab.
Export	Download HTML, Download PDF, Export JSON, Import JSON... , Copy snapshot link , "Made with Auric Artisan" credit switch.
Publish	Opens the publish dialog; disabled while Check has blocking findings.

Mode tabs

Tab	Contents
Content	Header panel, section cards, Add a section .
Style	Typeface, Paper, Rhythm, Accent, from your library, Reset to defaults .
Check	Accessibility findings; a dot marks findings while you are elsewhere.

Header panel

Control	Limit	Default
Use the built-in header	On / off	On
Name	80 characters	Follows profile
Headline / tagline	120 characters	Empty
Email + Show	120 characters	Follows profile; Show off
Location + Show	80 characters	Follows profile; Show on
Website + Show	200 characters	Follows profile; Show on

Control	Limit	Default
Avatar (image address) + Show	500 characters	Follows profile; Show on
Avatar picker	Double-click the avatar	—
Accent	Colour picker	#8A6D16 theme default

Section card controls

Drag handle, expand/collapse, **Hidden** badge, **Hide from portfolio / Show in portfolio**, **Move up**, **Move down**, **More actions** (**Move to top**, **Move to bottom**, **Duplicate**, **Delete**).

Bulk bar: **Collapse all / Expand all**; **Bulk actions** ▾ : **Expand all**, **Collapse all**, **Show all sections**, **Hide all sections**, **Reverse order**, **Clear all sections**.

Section types (25)

Heading, Text / Markdown, Raw HTML, Two columns, Image, Gallery, Button, Call to action, Link list, Work / Projects, Stats, Feature list, Steps, Timeline, Skills / Tags, Testimonial, Quote, Callout, FAQ / Accordion, Table, Embed, Video (MP4), Code, Divider, Spacer. Fields: see [Section types](#).

Style options

Option	Values	Default
Typeface	Fraunces , Newsreader , Space Grotesk , Manrope	Fraunces
Paper	Cream , White , Sand , Ink , No background	Cream
Rhythm	Tight , Even , Airy	Even
Accent	A colour from your saved palettes, graded against the paper	#8A6D16

Preview

Control	Values	Default
Width	Fit , Desktop (1160 px), Tablet (800 px), Mobile (390 px)	Fit

Troubleshooting

Symptoms, causes and fixes for problems with the Portfolio Builder, publishing and the Portfolio Index.

The builder shows "Sign in to build your portfolio"

Why: Building needs an account.

What to do: Select **Sign In**, then return to <https://auricartisan.com/portfolio/>.

Publish is greyed out

Why: The **Check** pane has one or more blocking findings. The button's tooltip says how many.

What to do: Open **Check**, select each **Blocking** finding and fix it. See [Preview and check](#).

In the publish dialog, Publish stays disabled

Why: The address is not valid or not available yet.

What to do: Use 2 to 31 lower-case letters, numbers and hyphens, wait for the availability check, or pick one of the **Or take** suggestions. If it says **Could not check that just now**, try again in a moment.

"That portfolio is larger than half a megabyte."

Why: Uploaded images (in Image and Gallery sections, or a large avatar) are stored inside the portfolio and make it too big to publish.

What to do: Host the images elsewhere and paste their `https://` addresses instead of uploading them.

Images do not show on the page

Why: The address is not `https://`, points to a page rather than an image, or the image host does not allow other sites to show it.

What to do: Use a direct `https://` link to the image file, or upload it (keeping the size limit in mind). Add alt text so the Check pane does not flag it.

My Raw HTML looks different, or parts are missing

Why: The builder removes scripts, iframes, forms, event attributes, `javascript:` addresses and fixed or sticky positioning, and limits each `<style>` block to its own section.

What to do: See [Markdown and Raw HTML](#). Use the **Embed** section for videos and prototypes.

An embed says "Paste a YouTube, Vimeo, CodePen, Figma or Spotify link."

Why: Only trusted hosts are allowed: YouTube, Vimeo, CodePen, Spotify, SoundCloud, Figma, Google and CodeSandbox, over `https://`.

What to do: Use a share link from one of those services.

The Work / Projects section is empty

Why: It shows palettes and other items saved in your Library, in this browser. With nothing saved, it says **Your published work will appear here once you save assets in the Library.**

What to do: Save palettes from the colour tools or libraries, then reload the builder.

Undo with Ctrl+Z does nothing

Why: Keyboard undo does not respond while you are typing in a field, and may not respond on the builder page at all.

What to do: Use the Undo and Redo buttons in the top bar, or the **Undo** and **Redo** commands.

"Allow pop-ups to preview." or "Allow pop-ups to print."

Why: **Preview** and **Download PDF** open a new tab, which your browser blocked.

What to do: Allow pop-ups for auricartisan.com.

The exported PDF has no background colours

Why: Browsers can drop backgrounds when printing.

What to do: Turn on the print dialog's background graphics option.

I cannot switch off the credit line

Why: Watermark-free exports are part of paid plans.

What to do: Keep the credit, or see [Account and billing](#). It never appears on your published page.

A snapshot link does not open

Why: The link was cut short when pasted, or the browser is very old.

What to do: Copy a fresh link, or publish at an address instead, which has a short link.

My portfolio is not in the Portfolio Index

Why: It was published less than fifteen minutes ago, **List it in the Portfolio Index** or **Let search engines list it** is off, or (for an external portfolio) it is waiting for review.

What to do: Check the switches in the publish dialog, or its status in the Search Console's **Portfolios** tab. See [List your portfolio](#).

"The portfolio index could not be reached"

Why: The directory could not load.

What to do: Try again later. Builder portfolios are still available at their own addresses.

My draft is different on another device

Why: Drafts sync to your account only when you are signed in. The newer copy wins, but a draft you are actively editing is not replaced.

What to do: Sign in on both devices, and reload the builder on the second one.

Portfolio FAQ

Short answers about the Portfolio Builder, publishing and the Portfolio Index.

Is the Portfolio Builder free?

Yes. Building, publishing and exporting are free on every plan. Paid plans can remove the "Made with Auric Artisan" credit from exported files.

Do I need an account?

To build and publish, yes. To view portfolios and the Portfolio Index, no.

Can I change my address later?

Unpublish and publish again at a new address. Taking a page down frees its address for others, so your old link stops working.

Does publishing again change the address?

No. **Publish these changes** updates the same address.

Can I keep my portfolio private?

Choose **Only people I send the link to** to share a snapshot link that is not stored on the site and never seen by search engines. Or publish with **Let search engines list it** and **List it in the Portfolio Index** switched off.

Who can see my email address?

Only if you switch on **Show** next to **Email**. It is off by default.

Is the view count tracking visitors?

No. It is "Counted as a number and nothing else — no visitor records, no addresses."

Can I host the portfolio myself?

Yes. **Download HTML** gives you a single file to put on any web host. You can then add that address to the Portfolio Index through the Search Console.

What does "Verified" mean in the Portfolio Index?

The owner proved, in the Search Console, that the site hosting the portfolio is theirs. Other external portfolios are reviewed by a person before they appear, and are marked **Reviewed**.

Can I import a portfolio from another tool?

Only files exported from this builder with **Export JSON**.

[WEBSITE](#) > [PORTFOLIO](#)

Portfolio shortcuts

Keys and pointer actions in the Portfolio Builder, on published portfolios and in the Portfolio Index.

Builder

Keys or action	Effect
Ctrl + K or the command field	Opens the list of builder commands; type, then Enter .
Enter	Finishes a one-line field you are typing in the preview.
Escape	Finishes editing in the preview; closes the templates dialog, the section picker, full-screen preview and the publish dialog.
Enter in the section picker's search	Adds the first matching section type.
Double-click the avatar	Choose a picture.
Drag a card's handle (⋮)	Reorder sections.

The Undo and Redo buttons show **Ctrl** + **Z** and **Ctrl** + **Shift** + **Z** in their tooltips; if the keys do not respond, use the buttons or the **Undo** and **Redo** commands.

Published portfolio

Keys or action	Effect
Right-click	Copy link to this portfolio, Save this portfolio as PDF, Email the owner, Reading mode, Make your own portfolio.
Alt + R	Reading mode.

Portfolio Index

Keys	Effect
/	Focus the search box.
Escape	Clear the search box, or close an open filter menu.

See also [Site features](#) for site-wide shortcuts.

WEBSITE > PORTFOLIO

Portfolio glossary

Terms used in the Portfolio Builder and the Portfolio Index.

Term	Meaning
Accent	The colour used for links, headings and buttons, picked from your saved palettes.
Address (handle)	The name after <code>auricartisan.com/p/</code> in your published address.
Alt text	A written description of an image for people using screen readers.
Blocking finding	A Check result that must be fixed before you can publish.
Credit line	The small "Made with Auric Artisan" line on exported HTML and PDF files.
Draft	Your portfolio as it is in the builder, saved automatically; not what visitors see until you publish.
External portfolio	A portfolio on your own website, added to the Portfolio Index through the Search Console.
Markdown	A plain-text way of writing formatted text, such as **bold** and # Heading .
Paper	The page's background and text colour: Cream, White, Sand, Ink or No background.
Placeholder	Grey example text in an empty field; it is not published.
Portfolio Index	The directory of portfolios at https://auricartisan.com/portfolios/ .
Publish	Put the current draft online at your address.

Term	Meaning
Raw HTML	A section that accepts your own HTML and CSS, cleaned for safety.
Rhythm	The page's spacing and corner roundness: Tight, Even or Airy.
Reviewed	An external portfolio a person has checked and approved.
Search Console	Auric Artisan's tool for site owners at https://auricartisan.com/search/console/ , where external portfolios are added.
Section	One building block of the page, such as a Heading or a Timeline.
Share card	The preview (name, headline, avatar) shown when your address is shared in apps.
Snapshot link	A link that contains the whole portfolio in the address itself.
Verified	An external portfolio on a site whose owner proved it is theirs.
WCAG	Web Content Accessibility Guidelines; the Check pane tests against WCAG 2.2 AA.

WEBSITE > PORTFOLIO

Limits and accuracy

Size limits, what the Check pane can and cannot tell you, and other limits of the Portfolio Builder and the Portfolio Index.

Size

- A published portfolio can be up to half a megabyte. Uploaded images and pictures are stored inside it and use that space quickly; linking to images hosted elsewhere does not.
- Snapshot links carry the whole portfolio in the address. With several embedded images they become very long, and some apps and sites will not accept them. Large avatars are left out of snapshot links.

The Check pane

- It checks the rendered page for text contrast (WCAG 2.2 AA), link text, image alt text, heading order and target size. It is a strong pre-flight, not a full accessibility audit: it cannot judge whether your alt text is accurate, whether your content is clear, or how the page behaves with every assistive technology.
- Text in colour formats it cannot measure is reported as unknown rather than passed.
- Contrast is measured against the page's own paper. Text over images is not measured.

Style

- Accents offered in **Style** come from palettes saved in your Library in this browser.
- The **No background** paper takes its text colour from the visitor's light or dark theme, so the page can look different for different visitors.

Drafts and sync

- Drafts sync to your account when you are signed in. If both devices change the draft, the newer copy wins; the builder will not overwrite a draft you are in the middle of editing.
 - Images in the Work / Projects section come from your Library in the browser you publish from.
-

The Portfolio Index

- Builder portfolios are copied into the index within fifteen minutes of publishing.
 - External portfolios that are not on a verified site wait for a person to review them.
 - The index honours your search-engine setting: with **Let search engines list it** off, the portfolio is not listed.
 - Colour search compares colours perceptually (OKLab); results are ordered by closeness, not by exact match.
-

Published pages

- The view count is a single number. It does not identify visitors.
- Embeds are limited to trusted hosts; Raw HTML is cleaned, so some markup is removed by design.

WEBSITE > PORTFOLIO

Privacy

What the Portfolio Builder stores, what becomes public when you publish or list a portfolio, and how to remove it.

While you build

What	Where	Notes
Your draft	This browser, and your account when signed in	Syncing to your account lets it follow you between devices.
Your preview width	This browser	A convenience setting.

Your draft is not public. Nothing a visitor sees changes until you publish.

When you publish

What becomes public at your address:

- everything in your visible sections (hidden sections are left out);

- the header details you chose to show — your name and headline always; email, location, website and avatar only if their **Show** switches are on;
- a copy of the Library items in your Work / Projects section, taken at the moment you publish.

Your sign-in email is not published unless you type it into the header and switch on **Show**.

Settings under your control:

- **Let search engines list it** — off keeps the page out of search engines.
- **List it in the Portfolio Index** — off keeps it out of the directory.
- **Allow a PDF download** and **Show the view count**.

The view count is "Counted as a number and nothing else — no visitor records, no addresses." Uploaded avatars are re-encoded, which removes hidden photo information such as camera and location details.

Snapshot links

A snapshot link contains the portfolio itself. Nothing is stored on the site, but anyone who has the link can open it, and it cannot be withdrawn: it keeps working even if you later change or delete your portfolio. Share it only with people you trust.

The Portfolio Index

A listed portfolio shows its name, headline, place, crafts, colours, avatar, address and when it was updated. External entries show what you entered in the Search Console.

Remove it

- **Unpublish** takes the page down at once; the address stops working.
- Switch off **List it in the Portfolio Index** and publish the change to leave the directory.
- **Take it out** removes an external entry.

For the site's privacy policy, see [Company and legal](#).

[WEBSITE](#) > [PORTFOLIO](#)

Related

Libraries, tools and pages that work with the Portfolio Builder and Portfolio Index.

Make work to show

- [Colour libraries](#) — save palettes, gradients and scales to show in your portfolio.
- [Basic Tools](#) and the [Design System Generator](#).

- **Library Kit** — your saved items, which the Work / Projects section and the Style accents draw on.
-

Publish and be found

- **Search** — the Search Console, where you verify a site and add an external portfolio.
 - **Collections** — the Portfolio Builder's place among all tools.
-

Account

- **Account and billing** — signing in, your profile (which the header follows) and paid plans (which remove the export credit line).
