Site features

An overview of the controls, panels and helpers that appear on every page of auricartisan.com, with links to each feature's guide.

Every page on <https://auricartisan.com> shares the same set of controls around its content: the header and its menus, a floating navigation dock, site search, a settings panel, a right-click menu, comfort helpers such as eye-rest reminders and reading mode, and a few quieter pieces such as the info bars and the cookie notice. They behave the same way on a tool, an article or a policy page, so you only learn them once.

Most of these features keep their choices in your browser, not in an account. They work signed out, and many of them keep working offline once the site is installed as an app (see [Download and offline](#)).

The floating kits (Feature Kit, Library Kit, UX Kit, Menu Kit, Status Kit, Update Kit and Advanced Kit) also appear on every page. They have their own section: see [Kits](#).

Who this section is for

- Anyone using the site for the first time and wondering what a button or panel does.
- People who want the site to look or behave differently: larger text, less motion, a different accent colour, Hindi instead of English, no custom cursor.
- Keyboard users who want the full list of shortcuts.

The features

Folder	What it covers
header-and-navigation	The header, its Company, Tools and Learn menus, the mobile drawer, the footer and the page utilities bar
navigation-dock	The floating dock with Back, Forward, Reload, outline, split view, recorder, copy, share and scroll buttons
search-and-spotlight	Spotlight search (Ctrl + K), its scopes, colour answers and > commands
settings-panel	Every section and setting in the Settings panel, plus export, import and reset
theme	Light, dark and system themes, and every place you can switch them
language	Switching between English and Hindi, and what is and is not translated
context-menu	The site's right-click menu, its quick bar, pinning, filtering and preferences
eye-rest	Optional reminders to look away from the screen
screen-saver	The optional idle screen that shows a colour from the site's colour atlas
custom-cursor	The ring-and-dot pointer, its shapes, and how to turn it off

Folder	What it covers
screen-recorder	Record the screen, this tab, a region or a tool canvas; export video, GIF and PNG
split-view	Two pages side by side (Ctrl + Shift + D)
shareable-links	What the address bar remembers about a page, and other link options
guide-and-page-outline	The page guide and guided tours (?), and the section rail on long pages
cookie-consent-and-privacy	The cookie notice, the four cookie categories and how to change your choice
info-bars-and-notice	Welcome, announcement and quick-links bars, the clock strip, notices and status messages
feedback	The feedback prompt, the quick rating, the survey and bug reports
accessibility-aids	Reading mode, comfort settings, keyboard access and other aids
keyboard-shortcuts	The master list of keyboard shortcuts for the whole site

Quick start

1. Open any page on <https://auricartisan.com>.
2. Press **Ctrl** + **K** (or **Cmd** + **K** on a Mac) to search the site from anywhere.
3. Press **Ctrl** + **,** to open the Settings panel and choose a theme, an accent colour and a text size.
4. Right-click anywhere on the page to see the site's own menu. Hold **Shift** while you right-click to get your browser's menu instead.
5. Press **?** to open the guide for the page you are on.
6. Select the globe button in the header to switch the site to Hindi, and select it again to switch back.

In this folder

Each feature folder follows the same layout: a **README.md** overview, a **docs/** folder with task guides and a full reference, and an **others/** folder with the glossary, related links and privacy notes. Start with the feature's **README.md**.

WEBSITE > SITE FEATURES > ACCESSIBILITY AIDS

Accessibility aids

The site-wide aids that make Auric Artisan easier to read, see and use: reading mode, text size, contrast, motion, keyboard access and more.

Auric Artisan is built for accessibility work, and the site offers the same care to its own visitors. On every page you can:

- make text larger or smaller in four steps;
- switch to **reading mode**, a calm, narrow column of large text with the floating controls hidden;
- **boost contrast**, **reduce motion**, **reduce transparency** and **underline links**;
- replace the custom cursor with your system pointer;
- choose light, dark or system theme;
- use the whole site from the keyboard, with shortcuts for the most common actions;
- switch the interface to Hindi.

Many of these respond to your device settings as well: the site follows your system's light or dark preference, and it turns off the custom cursor and animated effects when your device asks for reduced motion.

For the site's formal accessibility commitment, see the Accessibility statement at <https://auricartisan.com/company/accessibility/>.

Who it is for

- People with low vision, colour vision differences, reading difficulties or motion sensitivity.
- Keyboard and screen reader users.
- Anyone who reads long pages and wants fewer distractions.

Where to find it

- **Settings** (**Ctrl** + **,**) > **Appearance** (text size, theme, language) and **Comfort** (everything else).
- Keyboard shortcuts anywhere: **Alt** + **R** (reading mode), **Alt** + **M** (reduced motion), **Alt** + **+** / **Alt** + **-** / **Alt** + **0** (text size), **Alt** + **T** (theme).

Quick start

1. Press **Alt** + **+** twice. Text grows to **X-Large**.
2. Press **Ctrl** + **,**, select **Comfort**, and switch on **Boost contrast** and **Underline links**.
3. Open a long article and press **Alt** + **R**. Reading mode hides the floating controls and sets the text in a comfortable column.
4. Select **Reading mode** ✕ at the bottom of the screen to leave it.
5. Press **Alt** + **0** to return text to the default size.

What you can do

- Adjust text size, contrast, motion, transparency, link underlines and the pointer.
 - Read in a distraction-free layout with a progress bar.
 - Reach every panel and feature from the keyboard.
 - Rely on labelled controls, announced messages and a skip link on every page.
-

WEBSITE > SITE FEATURES > ACCESSIBILITY AIDS

Get started with the accessibility aids

Set up the site's text size, contrast, motion, transparency, link and pointer options for your needs.

All of these apply to every page at once and are remembered in this browser.

Make text larger

- Press **Alt** + **+** (one step larger) or **Alt** + **-** (one step smaller). **Alt** + **0** returns to the default.
- Or open **Settings** > **Appearance** > **Text size** and choose **Small** (90%), **Default**, **Large** (112%) or **X-Large** (125%).

This scales the site's text. Your browser's own zoom (**Ctrl** + **+**) also works and scales everything, including layout.

Stronger contrast

Settings > **Comfort** > **Boost contrast** draws secondary text in the stronger text colour and makes borders darker, in both themes. You can also choose the theme that suits you in **Appearance** > **Theme**.

Less motion

- **Settings** > **Comfort** > **Reduce motion** (or **Alt** + **M**) makes animations and transitions finish instantly and turns smooth scrolling into jumps.
- If your device's reduced-motion setting is on, the site also hides the custom cursor, stops the eye-rest horizon from animating, shortens the first-visit welcome, and swaps info-bar messages without fading.

Clearer surfaces

Settings › **Comfort** › **Reduce transparency** replaces blurred, see-through panels with solid ones.

Easier-to-spot links

Settings › **Comfort** › **Underline links** always underlines links in articles and other text.

Your system pointer

Settings › **Comfort** › **Custom cursor** off restores your own pointer, including any large or high-contrast pointer you set in your operating system.

Fewer distractions

- **Reading mode** (**Alt** + **R**) for long pages. See [Reading mode](#).
 - Hide the info bars, hero notice and demo chips with their **×** or in **Settings** › **Highlights**.
 - Turn off tooltips, or make them shorter, in **Settings** › **Tooltips**.
-

Language

The whole interface is available in Hindi. See [Language](#).

Keep your setup

Export your settings from the Settings panel (**Export**) and import them on another browser. See [Settings panel](#) › [Back up, restore and reset](#).

WEBSITE › **SITE FEATURES** › **ACCESSIBILITY AIDS**

Keyboard and screen readers

How the site supports keyboard-only use and screen readers, from the skip link to dialogs and announcements.

Keyboard access

- **Skip link.** On every page, the first **Tab** reveals **Skip to main content**. Press **Enter** to jump past the header.
- **Menus.** The header menus open with **Enter**, **Space** or the arrow keys and close with **Esc**, returning focus to their button.

- **Panels and dialogs.** Settings, Spotlight, the guide, the right-click menu, the recorder and the kits all open and close from the keyboard. When a panel closes, focus returns to what you used to open it.
 - **Focus stays inside** modal dialogs such as the guide, a guided tour and the Settings reset confirmation, so **Tab** cannot wander behind them.
 - **Shortcuts.** The most common actions have shortcuts (**Ctrl** + **K** search, **Ctrl** + **,** settings, **?** guide, **Alt** + **R** reading mode and more). Letter shortcuts with **Alt** are ignored while you type in a field. See [Keyboard shortcuts](#).
 - **Tooltips** appear when a control receives keyboard focus, not only on hover.
 - **Date fields.** Where the site shows its calendar for a date field, arrows move by day and week, **Page Up** and **Page Down** by month, **Shift** with them by year, **Home** and **End** to the start and end of the week, **Enter** or **Space** to choose, and **Esc** to close.
-

Screen reader support

- Buttons that show only an icon have a spoken name, such as "Open guide" or "Switch language between English and Hindi".
 - Panels and dialogs have names, for example "User settings", "Search" and "Page actions".
 - Confirmation messages ("Settings exported", "Page URL copied") are announced without moving focus.
 - The clock strip's time is not announced every second; its date, day and zone are announced only when they change.
 - In Hindi, the page is marked as Hindi so screen readers use a Hindi voice.
 - The language buttons are written in their own languages and are never translated, so you can always find yours.
 - The custom cursor and decorative effects are hidden from assistive technology.
-

Respecting your device settings

- **Colour scheme:** with the theme on **System**, the site follows your device's light or dark mode.
 - **Reduced motion:** the site turns off the custom cursor and animated effects when your device asks for less motion.
 - **Pointer type:** on touch screens the custom cursor is never shown.
-

Reporting a barrier

If something on the site is hard to use with your assistive technology, use the **Report a bug** form (see [Feedback](#)) or the contact details in the Accessibility statement at <https://auricartisan.com/company/accessibility/>.

[WEBSITE](#) > [SITE FEATURES](#) > [ACCESSIBILITY AIDS](#)

Reading mode

Turn reading mode on and off, and understand what it changes on the page.

Reading mode is a distraction-free layout with comfortable typography, for articles, documentation and other long pages.

Turn it on or off

- Press **Alt** + **R** (not while typing in a field).
- Or **Settings** > **Comfort** > **Reading mode**.
- Or right-click the page, choose **View**, then **Reading mode** (**Leave reading mode** when it is on).
- Or, on card pages, right-click a card and select the **Reading** pill.

To leave it, you can also select the **Reading mode** **×** chip at the bottom centre of the screen.

Reading mode stays on as you move between pages until you turn it off.

What changes

Area	In reading mode
Text column	Centred and limited to a comfortable line length (about 68 to 76 characters)
Body text	Larger, with generous line spacing
Headings	Clear sizes and spacing, kept to a readable width
Links	Underlined for scanning
Images and media	Kept within the column
Header	Scrolls away with the page instead of staying pinned
Floating controls	Kit launchers, the library launcher and the right-edge menu line are hidden
Info bars and clock strip	Hidden
Pointer	Your system pointer replaces the custom cursor
Decorative animation	Stopped
Progress	A thin bar across the top of the window fills as you scroll
Exit	Reading mode × chip at the bottom of the screen

What does not change

Tools keep working normally. The Settings panel, Spotlight (**Ctrl** + **K**), the guide (**?**) and the right-click menu remain available.

Accessibility aids reference

Every accessibility aid on the site, where to find it, its shortcut and its default.

Aid	Where	Shortcut	Default
Text size (Small, Default, Large, X-Large)	Settings › Appearance › Text size	Alt + + / Alt + - / Alt + 0	Default
Theme (Light, Dark, System)	Settings › Appearance › Theme ; header button	Alt + T	System
Language (English, Hindi)	Settings › Appearance › Language ; header globe	—	English
Reading mode	Settings › Comfort › Reading mode	Alt + R	Off
Reduce motion	Settings › Comfort › Reduce motion	Alt + M	Off
Reduce transparency	Settings › Comfort › Reduce transparency	—	Off
Boost contrast	Settings › Comfort › Boost contrast	—	Off
Underline links	Settings › Comfort › Underline links	—	Off
Custom cursor	Settings › Comfort › Custom cursor	—	On
Eye-rest reminders	Settings › Comfort › Eye-rest reminders	—	Off
Tooltips (on, detailed, advanced)	Settings › Tooltips	Alt expands a tooltip's details	On, detailed, not advanced
Info bars and notices	Settings › Highlights ; ✕ on each	—	Homepage only / on
Skip link	First Tab on every page	—	Always

Device settings the site follows

Device setting	Site behaviour
Dark or light mode	Followed when the theme is System
Reduced motion	Custom cursor off; eye-rest horizon still; shorter welcome; bars swap without fading
Touch screen or no hover	Custom cursor off
Speech voice	Used by Read aloud in the right-click menu

WEBSITE › SITE FEATURES › ACCESSIBILITY AIDS

Troubleshooting the accessibility aids

Fixes for common problems with the accessibility aids.

The Alt shortcuts do not work

Why: they are ignored while you type in a field, and when **Ctrl** or **Cmd** is also held. On some keyboards, **Alt** + **+** needs **Shift** as well; **Alt** + **=** also works.

What to do: click an empty part of the page first, or use the Settings panel.

Text size did not change everywhere

Why: the text size setting scales the site's text. Some tools draw text inside images or canvases, which it cannot resize.

What to do: use your browser's zoom (**Ctrl** + **+**) for those.

Something still moves with Reduce motion on

Why: Reduce motion stops animations and transitions defined by the site's styles. A tool that animates a canvas as its purpose (for example a live simulation) may keep doing so.

What to do: turn on your device's reduced-motion setting as well, which the site also follows.

My screen reader announces too much or too little

What to do: report it with **Report a bug** (see [Feedback](#)), naming the page, your screen reader and browser.

Reading mode did not change a page much

Why: reading mode is designed for text pages. On a tool page it hides floating controls and adjusts text, but the tool's own layout stays.

WEBSITE > SITE FEATURES > ACCESSIBILITY AIDS

Accessibility aids FAQ

Short answers about the site's accessibility aids.

Do I need an account to use these aids?

No. All of them work signed out and are kept in your browser.

Can I carry my setup to another computer?

Yes. Use **Export** in the Settings panel, then **Import** on the other computer.

Is there a dyslexia-friendly font?

The site does not offer a font switch. Reading mode, larger text and underlined links can make long text easier to read.

Where is the site's accessibility statement?

At <https://auricartisan.com/company/accessibility/>, also reachable from the **Company** menu and the footer.

Are the colour tools themselves accessible?

The tools have their own documentation, which describes their keyboard and screen reader support where it differs from the site's.

WEBSITE > SITE FEATURES > ACCESSIBILITY AIDS

Accessibility aids: supporting material

Contents of the accessibility aids supporting files.

File	What it covers

WEBSITE > SITE FEATURES > ACCESSIBILITY AIDS

Accessibility aids glossary

Terms used in the accessibility aids guides.

Term	Meaning
Reading mode	A distraction-free layout with a narrow, large-text column and no floating controls.
Reduced motion	Fewer and shorter animations; also a device setting the site follows.
Transparency	See-through, blurred panel backgrounds; turned solid by Reduce transparency.
Contrast	The difference in lightness between text and its background.
Skip link	A link at the start of the page that jumps past the header to the main content.
Focus	The control that keyboard input currently goes to, shown with an outline.
Screen reader	Software that reads the screen aloud or in braille.
Live announcement	A message a screen reader reads without moving focus.
Modal dialog	A panel that keeps keyboard focus inside it until closed.

WEBSITE > SITE FEATURES > ACCESSIBILITY AIDS

Accessibility aids privacy

What the accessibility aids store.

- Your choices are kept in this browser as part of your settings. They are not sent to Auric Artisan or attached to an account.
- The site reads your device's colour-scheme and reduced-motion preferences only to adjust the page; it does not record them.
- A page link you copy can carry appearance settings that differ from the defaults, such as text size (see [Shareable links](#)).

WEBSITE > SITE FEATURES > ACCESSIBILITY AIDS

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Right-click menu

What the site's own right-click menu does, how it adapts to what you clicked, and how to switch back to your browser's menu.

When you right-click a page on auricartisan.com, the site opens its own menu instead of your browser's. It is built around what you clicked: the top of the menu names the thing under your pointer (the page, a link, an image, a selection of text or a colour) and its own actions come first. Everything else is grouped into a few rows that open submenus, so the whole menu fits on one screen.

A **quick bar** of one-click buttons sits across the top. It starts with Back, Forward, Reload, Home and Copy URL, and you can pin any action to it with the star on that action's row. A **filter field** lets you type part of an action's name to find it anywhere in the menu, submenus included. A gear button opens the menu's own preferences: a longer "Everything" layout, a compact row height, or handing right-click back to your browser for good.

Your browser's menu is always one keystroke away: hold **Shift** while you right-click.

Who it is for

- Anyone who wants quick actions on the thing they are looking at: copy a colour as HEX, RGB, HSL or OKLCH; copy a link as Markdown; copy an image's palette; search the web for a selection.
- Keyboard users: the menu can be driven entirely from the keyboard and searched by typing.
- People who prefer their browser's menu: one setting makes the browser's menu the default.

Where to find it

On any page of <https://auricartisan.com>:

- right-click anywhere that is not a text field;
- or rest your pointer on the thin gold line at the middle of the right edge of the window for a moment;
- or press the menu key on your keyboard (**Shift** + **F10** on many keyboards), which your browser treats as a right-click.

Quick start

1. Right-click an empty part of any page. The heading shows **Page** and the page's title.
2. Select **Copy URL** in the quick bar. A message confirms "Page URL copied".
3. Select some text on the page and right-click on it. The heading now reads **Selection** with a word and character count.
4. Choose **Search the web**, then **DuckDuckGo**. A new tab opens with your selection searched.
5. Right-click again and start typing **dark**. The list filters to **Switch theme**. Press **Enter** to run it.

6. Right-click again, find **Split view** under **View**, and select the star on its row. **Split view** now appears in the quick bar.
 7. To use your browser's menu once, hold **Shift** and right-click.
-

What you can do

- Copy the page URL, title or a Markdown link; share or print the page; open the URL Analyzer on it.
 - Copy, search, translate or read aloud selected text.
 - Open, copy or share links, including as Markdown.
 - Open, copy, save and extract the palette of images.
 - Copy any colour on the site in four formats and send it to the colour tools.
 - Reach View actions (scroll, reading mode, split view, full screen, theme) and Site actions (home, search, settings, shortcuts, website update).
 - Pin up to six actions to the quick bar.
 - Choose a Focused or Everything layout and a Standard or Compact row height.
 - Make the browser's own menu the default.

Right-click menu guides

Contents of the right-click menu guides.

These guides cover the site's own right-click menu: how it reads what you clicked, how to use the quick bar and the filter, how to change its layout or turn it off, and the smaller right-click menus that some parts of the site have instead.

File	What it covers
getting-started.md	Open the menu, a tour of its parts, and your first actions
actions-for-what-you-clicked.md	The actions for a page, link, image, selection and colour
quick-bar-and-pinning.md	Pin and unpin quick-bar actions, and reset the quick bar
filter-and-keyboard.md	Find actions by typing, and drive the menu with the keyboard
menu-preferences.md	Layout, row height, and making your browser's menu the default
other-right-click-menus.md	The clock, info bar, card, footer, Settings and Library Kit menus
reference.md	Every section, row, action, shortcut and message
troubleshooting.md	Symptoms, causes and fixes
faq.md	Short answers

Get started with the right-click menu

Open the site's right-click menu, learn its parts, and run your first actions.

Open the menu

- **Right-click** anywhere on a page, except inside a text field, a drop-down or an editable area. Those keep your browser's menu so that spelling suggestions, paste and similar options still work.
- **Hover the right edge.** A short, thin gold line sits halfway down the right edge of the window. Rest your pointer on it for a moment and the menu opens beside it, showing the actions for the page. Move away and it closes.
- **Keyboard.** The menu key, or **Shift** + **F10** on many keyboards, sends a right-click to the page and opens the same menu.

To get your browser's menu instead, hold **Shift** while you right-click.

The parts of the menu

From top to bottom:

1. **Header.** An icon and two lines that describe what you clicked:
 - the kind (**Page**, **Link**, **Image**, **Selection** or **Colour**) and a detail, such as the page address, "This site" or "Another site" for a link, the pixel size and file type of an image, the word and character count of a selection, or the RGB value of a colour;
 - a label: the page title, the link address, the image file name, the quoted selection, or the colour's hex code. For a colour, the icon is a swatch of that colour.
2. **Quick bar.** A row of one-click buttons, each with an icon and a short label. By default: **Back**, **Forward**, **Reload**, **Home** and **Copy URL**. Hover a button to see its full name and shortcut.
3. **Filter field.** It reads "Type to filter N actions", where N is the number of actions available for what you clicked. It has keyboard focus as soon as the menu opens.
4. **Website update banner** (only sometimes). When a newer version of the site is ready, a highlighted row such as **Update available** appears here.
5. **The list.**
 - First, the actions for what you clicked, under **This page** for a page (the group heading is hidden in the default layout).
 - Then **More**: one row per group — **Page** (not shown when you clicked the page itself, whose actions are already listed), **Colour tools**, **View** and **Site**. Each row shows how many actions it holds. Hover it, or press the **Right** arrow, to open its submenu.
 - Last, **Browser's own menu**.
6. **Footer.** Hints for the keys (**↑↓** move, **↵** run, **→** submenu, the star to pin) and the gear button, **Customise this menu**. After an action such as pinning, the hints briefly give way to a confirmation.

Every action row has a star at its right-hand end. Select it to pin that action to the quick bar.

Try it

1. Right-click an empty part of the homepage. The header reads **Page** with the page's address and title.
2. Hover **View** under **More**. The View submenu opens to the side.
3. Select **Scroll to bottom**. The menu closes and the page scrolls to the end.
4. Right-click a link in the footer, such as **Privacy**. The header reads **Link · This site** with the link's address.
5. Select **Copy as Markdown**. A message confirms "Markdown link copied". Paste it into a document: it reads `[Privacy](https://auricartisan.com/legal/privacy/)`.

Close the menu

The menu closes when you run an action, press **Esc**, click anywhere outside it, scroll the page, resize the window or switch to another window. Scrolling inside the menu does not close it.

Next steps

- [Actions for what you clicked](#)

- Quick bar and pinning
- Menu preferences

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Actions for what you clicked

How the menu decides what you clicked, and the actions it offers for a page, a link, an image, a selection and a colour.

How the menu decides what you clicked

The menu checks, in this order, and uses the first that fits:

1. **Colour** — you right-clicked a colour: a selected hex code (such as `#d3af37`, or six hex characters that include at least one digit), a swatch or chip that carries a colour, or a short piece of text that is a hex code starting with `#`.
2. **Selection** — you right-clicked on text you have selected. A selection made earlier elsewhere on the page does not count unless your click lands on it.
3. **Image** — you right-clicked an image.
4. **Link** — you right-clicked a link.
5. **Page** — anything else.

Plain words that happen to be valid hex, such as "decade" or "facade", are not treated as colours.

Page

The actions for a page appear first when you right-click an empty area. For the other kinds, the same actions are in the **Page** row under **More**.

Action	Short label	What it does
Copy page URL	Copy URL	Copies the page's full address. Message: "Page URL copied".
Copy page title	Title	Copies the page title. Message: "Page title copied".
Copy as Markdown link	Markdown	Copies <code>[Page title](address)</code> . Message: "Markdown link copied".
Share page...	Share	Opens your device's share sheet. Without one, copies the address ("Link copied").
Print...	—	Opens your browser's print dialog (Ctrl + P).
Analyze this page	Analyze	Opens the URL Analyzer panel with this page's address, ready to audit.

Some pages add actions of their own at the top of this list, and some remove actions that do not apply. For example, a published portfolio page shows fewer site actions.

Link

Action	What it does
Open in new tab	Opens the link in a new tab (same as Ctrl + click)
Open in new window	Opens the link in a new window (same as Shift + click)
Copy link address	Copies the link's full address ("Link address copied")
Copy link text	Copies the visible text of the link (shown only when the link has text)
Copy as Markdown	Copies <code>[link text](address)</code> ("Markdown link copied")
Share link...	Shares the link through your device's share sheet, or copies it

The header says **This site** for a link on auricartisan.com and **Another site** for an external link.

Image

Action	What it does
Open image in new tab	Opens the image file on its own
Copy image	Copies the picture itself as a PNG, or its address when the browser does not allow that (see below)
Copy image address	Copies the image's address
Copy alt text	Copies the image's text alternative, shown beside the action. Greyed out with "None" when the image has none.
Copy its palette	Copies up to four main colours of the image as HEX codes, separated by commas. Four small swatches preview them.
Save image	Downloads the image under its own file name

Copy its palette appears only when the browser allows the site to read the image's pixels, which is true for images on auricartisan.com and for images from sites that permit it.

When **Copy image** cannot copy the picture, it copies the address and shows "Image address copied (the image itself can't be copied)".

If the image is inside a link, two more actions follow: **Open link in new tab** and **Copy link address**.

Selection

Action	What it does
Copy	Copies the selected text (Ctrl + C)
Copy as plain text	Copies the selection with all line breaks and extra spaces collapsed to single spaces

Action	What it does
Search this site	Opens the site's search page in a new tab with your selection as the query
Search the web	A submenu: Google, Bing, DuckDuckGo, Wikipedia, YouTube . Each opens a new tab.
Translate	Opens Google Translate in a new tab, translating the selection into the page's language
Read aloud / Stop reading	Reads the selection with your device's speech voice; selecting it again while speaking stops it
Share...	Shares the page with the selection as its text

Read aloud appears only if your browser offers speech. If speech fails, the message reads "Reading aloud is not available".

Colour

The header shows a swatch of the colour, its RGB value and its hex code.

Action	Example of what is copied
Copy HEX	<code>#D3AF37</code>
Copy RGB	<code>rgb(211 175 55)</code>
Copy HSL	<code>hsl(46 64% 52%)</code>
Copy OKLCH	<code>oklch(76.6% 0.138 91.6)</code>
Check its contrast	Opens the contrast tool with this colour
Build harmonies	Opens the harmony tool with this colour
Find its name	Opens the colour-name tool with this colour
Inspect in Colour Tools	Opens the colour inspector with this colour

Each copy row shows the value it will copy, in a fixed-width font. The examples are the values for the site's gold, `#D3AF37`; the menu computes them for the colour you clicked.

OKLCH is a way of writing colour as lightness, chroma (colourfulness) and hue that matches how people perceive colour more closely than HSL.

The groups under More

Colour tools

Shown on pages where the site's colour tools are available.

- **All colour tools...** (short label **Colour tools**, **Ctrl** + **Shift** + **C**) opens the colour tools menu at the spot you clicked.

- **Contrast System, Accessibility Lab, Harmony Studio, Color Space Converter, Color Name Finder, Gradient Library, Color Library** open that tool as a floating panel.

If you right-clicked a colour, the tool opens with that colour already loaded. If the tools cannot open on the page, you are taken to the Basic Tools page instead.

View

Action	What it does
Scroll to top	Scrolls to the top of the page (Home)
Scroll to bottom	Scrolls to the end of the page (End)
Reading mode / Leave reading mode	Turns reading mode on or off (Alt + R)
Split view	Opens or closes split view (Ctrl + Shift + D)
Full screen / Exit full screen	Enters or leaves full screen (F11)
Switch theme	Toggles light and dark. The row shows the current theme, Light or Dark .

Site

Action	What it does
Home	Goes to the homepage
Search the site	Opens Spotlight search (Ctrl + K), or the search page if Spotlight is not available
Settings	Opens the Settings panel
Keyboard shortcuts	Opens the Settings panel on its Shortcuts section
Update website	Checks for a newer version of the site and applies it (Ctrl + Shift + U)

The **Update website** row changes with the update state: **Update available** with a version number and "Ready", **Updating website** while it runs, and **Retry update** after an error. A message reads "Checking for updates..." when you start it. The update itself is handled by the Update Kit (see [Kits](#)).

Navigation actions

Back (**Alt** + **Left**), **Forward** (**Alt** + **Right**) and **Reload page** (**F5**) do not have a group of their own. They are in the default quick bar and can be found with the filter.

Browser's own menu

The last row, **Browser's own menu** (**Shift** + right-click), closes the site menu and shows the message "Right-click again for the browser's menu". Your next right-click opens the browser's menu; the one after that opens the site menu again.

Actions that depend on the page

Some rows appear only where the page supports them. **Settings**, **Keyboard shortcuts** and **Reading mode** need the Settings panel; the **Colour tools** group needs the colour tools; **Switch theme** needs a theme control. Pages that do not load these, such as published portfolios, show a shorter menu.

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Filter and keyboard

Find any action by typing, and use the right-click menu entirely from the keyboard.

Find an action by typing

The filter field below the quick bar has keyboard focus as soon as the menu opens, so you can start typing straight away.

1. Right-click the page.
2. Type part of an action's name, for example **mark**.
3. The list is replaced by matching actions from every group, submenus included, each tagged with the group it belongs to (for example **Page** or **Link**). The field shows how many matched, for example "2 of 27".
4. The first match is highlighted. Press **Enter** to run it, or use the arrow keys to choose another.

How matches are found:

- The filter matches the action's name, the name of its group, and a few extra words for some actions. For example, **dark** or **light** finds **Switch theme**, **audit** or **seo** finds **Analyze this page**, and **colors** finds **Copy its palette**.
- Names that start with what you typed are listed first, then names that contain it, then matches on the extra words.
- Up to 12 results are shown.
- If nothing matches, the list reads "No actions match" followed by your text.

Typing works from anywhere in the menu: if a row has focus and you type a letter, it goes into the filter. Press **Esc** once to clear the filter.

Keyboard reference

Keys	What they do
Letters and digits	Type into the filter
Down from the filter	Move to the highlighted result or the first action
Up / Down	Move between rows and quick-bar buttons; the list wraps round

Keys	What they do
Up from a quick-bar button	Return to the filter field
Right on a group row	Open its submenu and move into it
Right on an action row	Move to that row's pin star
Left on a pin star	Move back to its row
Left or Esc in a submenu	Close the submenu and return to its group row
Enter or Space	Run the focused action, open a focused group, or toggle a focused star
Enter in the filter	Run the highlighted result
Esc	Close a submenu; otherwise clear the filter; otherwise close the menu
Esc in the preferences view	Return to the action list

When the menu closes, keyboard focus goes back to where it was before you opened it.

Mouse behaviour

- Hovering a group row opens its submenu after a short pause. Moving to another row closes it.
- Submenus open to the right of the menu, or to the left when there is no room.
- Selecting a group row also opens its submenu.

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Menu preferences and turning it off

Change the right-click menu's layout and row height, and make your browser's own menu the default.

The gear button at the bottom right of the menu, **Customise this menu**, replaces the action list with the menu's preferences. Every change is saved as soon as you make it; the footer confirms "Saved". Select **Done**, the gear again, or press **Esc** to return to the actions. Typing in the filter field also returns to the actions.

Quick bar

Shows your pinned actions as chips, each with an X to unpin it, and a **Reset** chip that restores the default five. See [Quick bar and pinning](#).

Layout

Option	Description on screen	What it looks like
Focused (default)	What you clicked, then one row per group	Your context's actions, then a More section with one row per group that opens a submenu

Option	Description on screen	What it looks like
Everything	Every group open in one list	Every group's actions listed in full, each under its own heading, with no submenus

Choose **Everything** if you prefer to see all actions at once and do not mind a longer menu.

Row height

Option	Effect
Standard (default)	Comfortable rows, easier to hit with a pointer or a finger
Compact	Shorter rows, so more actions fit in the same space

Right-click on this site

This choice decides which menu a plain right-click opens.

Option	Description on screen
This menu (default)	Hold Shift for the browser's menu
The browser's menu	Hold Shift for this one

Make your browser's menu the default

1. Right-click the page and select the gear.
2. Under **Right-click on this site**, select **The browser's menu**.
3. The footer confirms "Right-click now opens the browser's menu".

From now on a plain right-click opens your browser's menu everywhere on the site. To reach the site menu, hold **Shift** while you right-click. You can also rest your pointer on the thin line at the right edge of the window.

Switch the site menu back on

1. Hold **Shift** and right-click the page. The site menu opens.
2. Select the gear, then **This menu** under **Right-click on this site**.

One-off use of the browser's menu

Without changing any preference:

- hold **Shift** while you right-click; or
- choose **Browser's own menu** at the foot of the site menu, then right-click again.

Right-clicking in a text field, drop-down or editable area always opens the browser's menu.

Where preferences are kept

Your layout, row height, right-click choice and quick-bar pins are kept in this browser and apply on every page of the site. They are not part of the Settings panel's export file.

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Other right-click menus on the site

The smaller right-click menus that some parts of the site show instead of the main menu.

A few parts of the site have a small right-click menu of their own, with actions for that one thing. Right-clicking them opens that menu instead of the main one. They share a look: a heading, labelled groups of buttons, and sometimes a **Reset** button and an **All settings** link.

All of these close with **Esc**, a click elsewhere, a scroll or a window resize.

Clock strip

Right-click the clock strip at the top of a page (when it is switched on) to open **Clock settings**: a live preview, **Format** (**12h**, **24h**), **Date** (**Long**, **D/M/Y**, **M/D/Y**, **ISO**), **Show** switches (**Seconds**, **Weekday**, **Zone**), a searchable **Time zone** list, **Reset** and **All settings** →. Details are in [Info bars and notices > Clock strip](#).

Info bars

Right-click the welcome, announcement or quick-links bar to open a menu headed with the bar's name ("Welcome messages", "Site announcements" or "Site tools"). Under **This bar**:

Button	What it does
Open	Goes to the link you right-clicked, or the bar's first link
Copy link	Copies that link's address
Hide bar	Hides this bar everywhere (same as its ×)
Settings	Opens the Settings panel on the Comfort section

Cards on browsing pages

On pages with a grid of cards (the homepage, Collections, Blog, Changelog, Documentation and Learn), right-clicking a card opens a **Card settings** menu headed with the card's title:

- **Card: Pin** (or **Unpin**), **Open**, **New tab**, **Copy link**;

- **View:** **Grid** or **List**;
- **Density:** **Cozy** or **Compact**;
- **Columns:** **Auto**, **2**, **3** or **4**;
- **Sort:** the sort orders the page offers;
- **System:** **Theme** and **Reading** switches;
- **Reset** and **All settings** →.

This menu is part of the card libraries and is described fully in [Collections > Card menu](#).

Footer contact card

Right-click the "Start a conversation" card in the footer to open a menu headed **Start a conversation**. Under **Contact**:

Button	What it does
Email us	Opens your email app with a message to the studio address
Copy email	Copies the email address (the button briefly reads "Copied")
Copy link	Copies the address of the page you are on
LEACB	Opens the studio's portfolio site in a new tab

Inside the Settings panel

Right-clicking inside the Settings panel opens a menu with **Turn on** or **Turn off** for the switch you clicked, and **Export**, **Import**, **Reset section** and **Reset all**. See [Settings panel > Back up, restore and reset](#).

Inside the Library Kit

The Library Kit's panel has its own right-click menu for your saved items. See [Kits](#).

Places that keep the browser's menu

The main menu never opens, and your browser's menu appears instead, in:

- text fields, text areas, drop-down lists and other editable areas;
- the accessibility checklist's evidence drawing tool;
- any spot a page has marked as needing the browser's own menu.

[WEBSITE](#) > [SITE FEATURES](#) > [RIGHT-CLICK MENU](#)

Quick bar and pinning

Pin your most-used actions to the quick bar at the top of the right-click menu, unpin them, and reset the bar.

The **quick bar** is the row of one-click buttons across the top of the right-click menu. Each button shows an icon and a short label; hover it to see the full action name and its shortcut.

By default it holds five actions: **Back**, **Forward**, **Reload**, **Home** and **Copy URL**.

Pin an action

1. Right-click the page and find the action you use most, for example **Split view** under **View**, or **Copy HEX** on a colour.
2. Select the star at the right-hand end of its row (**Pin to the quick bar**).
3. The star fills, the footer confirms "Pinned to the quick bar", and the action appears at the end of the quick bar.

With the keyboard: move to the action's row, press the **Right** arrow to move onto its star, and press **Enter** or **Space**.

Unpin an action

- Select the filled star on the action's row (**Unpin from the quick bar**). The footer confirms "Unpinned from the quick bar".
- Or open the gear (**Customise this menu**) and select the X on the action's chip under **Quick bar**.

Limits

- The quick bar holds **six** actions. With six pinned, selecting another star shows "The quick bar holds 6: unpin one first".
- Group rows (Page, Colour tools, View, Site), greyed-out actions and **Browser's own menu** have no star and cannot be pinned.

Why a pinned action is sometimes missing

The quick bar shows only pinned actions that make sense for what you clicked. **Copy HEX** appears only when you right-click a colour, **Open in new tab** only on a link, **Copy** only on a selection, and so on. The pin is kept; the button returns the next time the action applies. Actions that belong to every page, such as **Copy URL**, **Split view** or **Settings**, always appear.

Reset the quick bar

1. Right-click the page and select the gear (**Customise this menu**) at the bottom right.
2. Under **Quick bar**, select **Reset**.

3. The bar returns to **Back**, **Forward**, **Reload**, **Home** and **Copy URL**, and the footer confirms "Quick bar reset".

When nothing is pinned, the **Quick bar** area of the preferences reads "Empty: pin actions with the star", and the bar itself is hidden from the menu.

Your pins are kept in this browser and apply on every page.

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Right-click menu reference

Every part, action, shortcut, preference and message of the site's right-click menu.

Ways to open

Method	Opens
Right-click (not in a text field)	The menu for what is under the pointer
Shift + right-click	The browser's menu (or the site menu, if you made the browser's menu the default)
Rest the pointer on the gold line at the right edge	The menu for the page, beside the line
Menu key or Shift + F10	The same as a right-click

Header

What you clicked	Kind and detail line	Label
Page	Page · page address	Page title
Link	Link · This site or Another site	Link address
Image	Image · width × height · file type	File name
Selection	Selection · word count · character count	The quoted text, shortened to about 70 characters
Colour	Colour · rgb(r g b) (with a colour swatch icon)	Hex code

Sections of the list

Section	Shown when	Contents
Context actions	Always	This page, Link, Image, Selection or Colour actions
More	Focused layout	One row per group: Page (not for a page), Colour tools, View, Site

Section	Shown when	Contents
Group headings	Everything layout	Every group listed in full under its heading
Browser	Always	Browser's own menu
Website update banner	An update is available, running or failed	Update available, Updating website or Retry update

Right-click now opens the browser's menu	The browser's menu was chosen
No actions match "..."	The filter found nothing

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Troubleshooting the right-click menu

Fixes for common problems with the site's right-click menu.

I get my browser's menu instead of the site menu

Possible causes and fixes:

- You right-clicked inside a text field, drop-down or editable area. These always keep the browser's menu. Right-click outside the field.
- You held **Shift**. Right-click again without it.
- You chose **Browser's own menu** on your previous right-click. That lasts for one right-click only; try again.
- You set **Right-click on this site** to **The browser's menu**. Hold **Shift** and right-click to reach the site menu, then change it back under the gear.
- The page has only just loaded. The menu arrives a moment after the page; wait and try again.
- You right-clicked something with its own menu, such as the clock strip or a card. See [Other right-click menus](#).

I cannot get my browser's menu

Hold **Shift** while you right-click. If you often need it, make it the default under the gear (**Right-click on this site** > **The browser's menu**).

A copy action says "Could not copy"

Why: the browser blocked access to the clipboard. This can happen in some embedded views, when the page is not in focus, or when a browser setting blocks clipboard access.

What to do: click the page once so it has focus and try again, or select the text and use **Ctrl** + **C**.

Copy image copies the address instead of the picture

Why: some browsers do not let web pages put images on the clipboard, and images from other websites often cannot be read by the page.

What to do: use **Open image in new tab** and copy it from there, or **Save image**.

Copy its palette is missing

Why: the browser does not allow the page to read that image's pixels (usually an image from another website), or the image has not finished loading.

What to do: wait for the image to load and right-click again. For images from elsewhere, save the image and use the site's Image Picker tool.

The Colour tools group is missing

Why: the colour tools are not loaded on this page, for example on a published portfolio.

What to do: open a tool page such as Basic Tools, or use **Ctrl** + **Shift** + **C** where the tools are available.

Right-clicking a word gave me a colour

Why: the word is also a valid hex code and contains a digit (for example **a1b2c3**), or the element you clicked carries a colour.

What to do: use the **Page** row under **More** for the page actions, or select the text and choose from the Selection actions if you right-click on the selection.

A pinned action does not show in the quick bar

Why: the action only applies to certain things, such as a colour or a link. It appears when you right-click one.

The menu closed while I was using it

Why: scrolling the page, resizing the window, switching windows or clicking outside the menu closes it.

What to do: keep the pointer inside the menu while scrolling its list.

Read aloud does nothing

Why: your device has no speech voice for the page's language, or speech is turned off in the browser.

What to do: check your operating system's text-to-speech settings. If speech fails, the menu shows "Reading aloud is not available".

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Right-click menu FAQ

Short answers to common questions about the site's right-click menu.

Can I turn the site menu off?

Yes. Right-click, select the gear, and under **Right-click on this site** choose **The browser's menu**. The site menu is then available only with **Shift** + right-click or from the line at the right edge of the window.

Does the menu work on phones and tablets?

A long press on a touch screen is handled by the browser and usually opens the browser's own menu or text selection. The site menu is designed for a mouse, trackpad or keyboard.

Where do Search the web and Translate send my text?

Only where you ask. **Search the web** opens the search engine you pick in a new tab with the selected text in the address. **Translate** opens Google Translate in a new tab. Nothing is sent until you choose one of them.

Is my quick bar the same in every browser?

No. Pins and preferences are kept in the browser you set them in.

Why does the same menu look shorter on some pages?

Some rows depend on what the page loads. Published portfolio pages, for example, have no colour tools and remove some site actions, so their menu is shorter.

Is the browser extension's menu the same thing?

No. The Auric Artisan browser extension has its own right-click menu for other websites. On [auricartisan.com](#) the extension steps aside and the site's own menu is the one you see. See [Browser extension](#).

Can I see the colour formats before copying?

Yes. Each colour copy row shows the exact value it will copy.

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Right-click menu: supporting material

Contents of the right-click menu's supporting files.

Background material for the right-click menu: terms, shortcuts, related features, what it stores and when it changed.

File	What it covers
glossary.md	Terms used by the menu and its guides
shortcuts.md	Keyboard shortcuts for opening and using the menu
related.md	Related features, tools and pages
privacy.md	What the menu stores and what uses the network
release-notes.md	User-facing history

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Right-click menu shortcuts

Keyboard shortcuts for opening the right-click menu, moving around it, and running its site-wide actions.

Opening and switching menus

Keys	Action
Right-click	Open the site menu (or the browser's, if you made it the default)
Shift + right-click	Open the other menu: the browser's by default
Menu key or Shift + F10	Same as a right-click

Inside the menu

Keys	Action
Type any letter	Filter the actions
Up / Down	Move between rows
Right	Open a group's submenu, or move to a row's pin star
Left	Leave a pin star, or close a submenu
Enter / Space	Run the focused action
Esc	Close a submenu, clear the filter, or close the menu, in that order

Site-wide shortcuts the menu offers

These work anywhere on the site, with or without the menu open.

Keys	Action
Ctrl + Shift + C	Open the colour tools menu. If you have selected a hex code, it is loaded.
Ctrl + Shift + U	Check for and apply a website update
Ctrl + Shift + D	Open or close split view
Ctrl + K	Open Spotlight search
Alt + R	Reading mode on or off

The full list for the site is in [Keyboard shortcuts](#).

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Right-click menu glossary

Terms used by the right-click menu and its guides.

Term	Meaning
Context	The thing you right-clicked: a page, link, image, selection or colour.
Context menu	A menu that opens on right-click and offers actions for what is under the pointer.
Quick bar	The row of one-click buttons at the top of the menu. Holds up to six pinned actions.
Pin	To add an action to the quick bar with the star on its row.
Group	A set of related actions (Page, Colour tools, View, Site) shown as one row that opens a submenu.
Submenu	The small panel that opens beside a group row, listing that group's actions.
Filter	The field that narrows the menu to actions whose names match what you type.
Focused layout	The default layout: your context's actions, then one row per group.
Everything layout	A layout that lists every group's actions in full, with no submenus.
Markdown link	Text written as <code>[label](address)</code> , which many editors turn into a link.
HEX, RGB, HSL	Common ways of writing a colour: a hex code, red-green-blue values, or hue-saturation-lightness.
OKLCH	A way of writing colour as lightness, chroma and hue that follows human perception closely.
Alt text	The text alternative of an image, read by screen readers and shown when the image cannot load.
Share sheet	Your device's own panel for sending a link to an app or contact.

WEBSITE > SITE FEATURES > RIGHT-CLICK MENU

Right-click menu privacy

What the right-click menu stores and which of its actions use the network.

Stored in your browser

- Your quick-bar pins, layout, row height and right-click choice, in local storage for auricartisan.com.
- Nothing about what you right-click or copy is stored or sent.

Actions that leave the site

These open another website in a new tab and pass it the text you chose:

- **Search the web** › **Google**, **Bing**, **DuckDuckGo**, **Wikipedia** or **YouTube** — sends the selected text as the search query.
- **Translate** — sends the selected text to Google Translate.
- **Open in new tab**, **Open in new window** and **Open image in new tab** — open the address you right-clicked.

Actions that stay on your device

- The copy actions put text or an image on your clipboard.
- **Read aloud** uses your device's own speech voice.
- **Share...** hands the link to your device's share sheet; what happens next depends on the app you pick.
- **Copy its palette** reads the image's colours inside your browser.

Actions that use the site

- **Search this site** opens the site's search page.
- **Analyze this page** opens the URL Analyzer with the address of the page you are on, ready to audit it.
- **Update website** checks the site for a newer version.

WEBSITE › SITE FEATURES › RIGHT-CLICK MENU

Right-click menu release notes

User-facing history of the site's right-click menu.

When	Change
September 2026	The menu was rebuilt around what you clicked: a header naming the page, link, image, selection or colour; a quick bar of pinnable actions (up to six); groups that open submenus; a filter that searches every action; and preferences for layout, row height and whether a right-click opens this menu or the browser's.

Earlier site releases are listed in the public changelog at <https://auricartisan.com/library/changelog/>. The v0.9.10 entry (27 July 2026) refers to a custom right-click menu in the browser extension, which is a separate product.

The browser extension

- [Browser extension](#) — has its own right-click menu for other websites.

WEBSITE > SITE FEATURES > COOKIE CONSENT AND PRIVACY

Cookie consent and privacy choices

The cookie notice, the four cookie categories, and how to accept, reject, customise or withdraw your choice.

On your first visit, after the short welcome animation, a bar appears at the bottom of the page: **We value your privacy**. It explains that Auric Artisan uses cookies and local storage to keep the site secure, remember your preferences and understand basic, anonymous usage, and it offers three choices: **Accept All**, **Reject All** and **Customise**. The page stays readable and usable while the bar is showing.

Your choice covers four categories: **Essential** (always on), **Functional**, **Analytics** and **Marketing**. You can change it at any time on the Cookie Policy page, which lists every cookie in each category with its purpose and how long it lasts, and where you can also clear the site's non-essential cookies or withdraw your consent.

Who it is for

Every visitor. The choice decides whether the site may measure how pages are used, and which optional cookies it may set.

Where to find it

- The consent bar on your first visit.
- The Cookie Policy at <https://auricartisan.com/legal/cookies/>, section **Manage Cookie Preferences**.
- The **Cookies** link in the footer.

Quick start

1. On your first visit, read the bar at the bottom of the page.
2. Select **Customise**. The Cookie Policy page opens at **Manage Cookie Preferences**.
3. Switch **Analytics Cookies** on or off as you prefer. **Essential Cookies** are always on.
4. Select **Save Preferences**. A message confirms "Cookie preferences saved successfully."
5. The section now shows **Consent recorded** with the date and time.

What you can do

- Accept all optional cookies, reject them, or choose by category.
- See every cookie the site lists, with its purpose, duration and type.
- Change your choice at any time.
- Clear all non-essential cookies, or withdraw your consent.

troubleshooting.md	Symptoms, causes and fixes
faq.md	Short answers

WEBSITE > SITE FEATURES > COOKIE CONSENT AND PRIVACY

Get started with cookie consent

What the cookie consent bar says, and what each of its buttons does.

When the bar appears

The consent bar appears at the bottom of the page on your first visit, once the short welcome animation has finished. It stays until you choose. It does not dim or block the page, so you can read the page before deciding.

It does not appear on the sign-in and verification pages, and it does not appear again once you have made a choice in this browser.

What it says

We value your privacy

The bar explains that Auric Artisan uses cookies and local storage to keep the platform secure, remember your preferences (theme, accent colour, language and tool settings) and understand basic, anonymous usage. Essential cookies are always on; analytics and other optional cookies run only with your consent, and your data is never sold. It links to the full **Cookie Policy**.

The three buttons

Button	What it does
Accept All	Turns on every category: Essential, Functional, Analytics and Marketing
Reject All	Keeps only Essential, turns the others off, and deletes the site's non-essential cookies

Button	What it does
Customise	Opens the Cookie Policy page at Manage Cookie Preferences , where you choose each category

After **Accept All** or **Reject All**, the bar slides away and your choice is recorded with the date and time.

Note: The bar says you can change your choice "from Settings". The cookie controls are on the Cookie Policy page, not in the Settings panel. See [Manage your cookie preferences](#).

What your choice affects

- **Analytics:** with Analytics on, the site may record anonymous usage events, such as which pages and features are used. With it off, no usage events are recorded. See [Privacy](#) for details, including Do Not Track.
- **Functional:** covers remembering preferences such as theme, language and layout.
- **Marketing:** reserved for campaign attribution if the site enables it later. The policy states that Auric Artisan does not currently use marketing pixels or cross-site advertising profiles.
- **Essential:** signing in, security and remembering your consent choice. Always on.

WEBSITE > SITE FEATURES > COOKIE CONSENT AND PRIVACY

Manage your cookie preferences

Change, save, clear or withdraw your cookie choices on the Cookie Policy page.

All cookie controls are in the **Manage Cookie Preferences** section of the Cookie Policy page.

Open the preferences

- Select **Customise** on the consent bar; or
- open <https://auricartisan.com/legal/cookies/#cookies-preferences>; or
- select **Cookies** in the footer, then **Manage Cookie Preferences** in the page's section rail.

The section opens and scrolls into view.

Choose by category

Each category is a card with a title, a count of listed cookies, a description and a switch:

- **Essential Cookies** — marked **Always Active**; the switch cannot be turned off.
- **Functional Cookies**
- **Analytics Cookies**

- **Marketing Cookies**

Select **Show cookies** under a card to see a table of that category's cookies (Cookie, Purpose, Duration, Type), and **Hide cookies** to fold it away.

To save a choice:

1. Turn the switches on or off.
2. Select **Save Preferences**.

Result: "Cookie preferences saved successfully." Cookies from any category you switched off are deleted, and the **Consent recorded** line shows the new date and time.

Important: **Accept All** and **Reject All** on this page only set the switches. Select **Save Preferences** afterwards to apply them.

If you have never made a choice, the switches start with Functional on and Analytics and Marketing off.

Clear all non-essential cookies

Select **Clear All Cookies**. The site deletes its non-essential cookies, forgets your consent choice and turns off the optional switches: "All non-essential cookies have been cleared." The consent bar will appear again on your next page.

Withdraw consent

Once you have made a choice, a **Consent recorded** line appears with the date, beside **Withdraw Consent**. Select it to forget your choice and delete non-essential cookies: "Cookie consent withdrawn. Preferences reset." The consent bar appears again on your next page, so you can choose afresh.

Where your choice applies

Your choice is kept in this browser. Another browser or device asks again. Clearing your browser's data for auricartisan.com also removes it.

WEBSITE > SITE FEATURES > COOKIE CONSENT AND PRIVACY

Cookie consent reference

The cookie categories, every listed cookie, the consent controls and their messages.

Categories

Category	Can be turned off	Description on the Cookie Policy page (summary)
Essential	No (Always Active)	Core functions: authentication, security, session management and access control
Functional	Yes	Remembers settings such as theme, language, layout choices and form data
Analytics	Yes	How visitors use the platform; aggregate or pseudonymous, never used for advertising profiles
Marketing	Yes	Reserved for campaign attribution if enabled later; no marketing pixels or cross-site profiles now

Listed cookies

Cookie	Category	Purpose	Duration	Type
aa_sid	Essential	Signed-in session management and authentication	Up to 30 days	First-party
aa_csrf	Essential	Cross-site request forgery protection	Up to 30 days	First-party
aa_cookie_consent	Essential	Stores your cookie preferences	1 year	First-party
aa_theme	Functional	Stores light/dark mode preference	1 year	First-party
aa_lang	Functional	Language and locale preference	1 year	First-party
aa_eye_rest	Functional	Eye rest feature interval and duration settings	1 year	First-party
aa_layout	Functional	Grid/list view and sidebar preferences	6 months	First-party
aa_recent	Functional	Recently viewed items for quick access	30 days	First-party
aa_analytics_id	Analytics	Anonymous visitor identifier for usage metrics	1 year	First-party
aa_perf	Analytics	Page load and interaction performance timing	Session	First-party

Marketing lists no cookies.

Consent bar

Button	Effect
Accept All	All four categories on; saved
Reject All	Essential only; non-essential cookies deleted; saved
Customise	Opens Manage Cookie Preferences on the Cookie Policy page

Preferences section (Cookie Policy page)

Control	Effect
Category switches	Choose each optional category
Show cookies / Hide cookies	Shows or hides the category's cookie table
Accept All	Sets every optional switch on (not saved until Save Preferences)
Reject All	Sets every optional switch off (not saved until Save Preferences)
Save Preferences	Saves the switches; deletes cookies of switched-off categories
Clear All Cookies	Deletes non-essential cookies and forgets your choice
Withdraw Consent	Forgets your choice and deletes non-essential cookies
Consent recorded	Date and time of your saved choice

Messages

Message	When
Cookie preferences saved successfully.	After Save Preferences
All non-essential cookies have been cleared.	After Clear All Cookies
Cookie consent withdrawn. Preferences reset.	After Withdraw Consent

Defaults before any choice

Functional on; Analytics off; Marketing off. No analytics events are recorded until you give Analytics consent.

WEBSITE > SITE FEATURES > COOKIE CONSENT AND PRIVACY

Troubleshooting cookie consent

Fixes for common problems with the cookie notice and preferences.

The consent bar keeps coming back

Why: your choice is kept in this browser's storage. It is lost if the browser clears site data on exit, if you use a private window, or if storage is blocked for the site.

What to do: allow auricartisan.com to keep site data, or accept that a private window asks each time.

I cannot find the cookie settings in the Settings panel

Why: the consent bar mentions Settings, but the controls are on the Cookie Policy page.

What to do: open <https://auricartisan.com/legal/cookies/#cookies-preferences>.

I pressed Accept All or Reject All on the Cookie Policy page and nothing changed

Why: on that page, those buttons only set the switches.

What to do: select **Save Preferences**.

My settings survived Reject All

Why: your preferences (theme, accent, language and the Settings panel's choices) are kept in your browser's local storage so that the features you use keep working. Rejecting optional cookies does not reset them.

What to do: use **Reset all** in the Settings panel, or clear the site's data in your browser, to remove them.

The bar does not appear on the sign-in page

Why: the notice is not shown over sign-in and verification pages. It appears on the next ordinary page.

WEBSITE > SITE FEATURES > COOKIE CONSENT AND PRIVACY

Cookie consent FAQ

Short answers about cookies and privacy choices on Auric Artisan.

Does the site sell my data?

The consent notice states that your data is never sold. The full terms are in the Privacy Policy at <https://auricartisan.com/legal/privacy/>.

Are the cookies third-party?

All cookies listed on the Cookie Policy page are first-party (set by auricartisan.com).

What happens if I ignore the bar?

Nothing optional is enabled. No analytics events are recorded until you accept Analytics. The bar stays until you choose.

Does rejecting cookies stop the tools from working?

No. Essential functions and every tool keep working. Rejecting only turns off the optional categories.

Does my browser's Do Not Track setting count?

Yes. With Do Not Track or Global Privacy Control turned on in your browser, the site's analytics stays off even if you accepted Analytics. See [Privacy](#).

Where are the full policies?

- Cookie Policy: <https://auricartisan.com/legal/cookies/>
- Privacy Policy: <https://auricartisan.com/legal/privacy/>

They are also summarised in [Company and legal](#).

Cookie consent glossary

Terms used in the cookie consent guides.

Term	Meaning
Cookie	A small piece of data a website stores in your browser and receives back on later visits.
Local storage	Browser storage that a website's pages can read, but which is not sent to the website automatically.
First-party	Set by the website you are visiting (here, auricartisan.com), not by another company.
Consent	Your recorded choice about which optional categories the site may use.
Essential	Needed for the site to work securely; cannot be turned off.
Functional	Remembers your preferences.
Analytics	Measures how the site is used, in aggregate or pseudonymously.
Marketing	Campaign attribution and advertising measurement; not currently used.
Do Not Track, Global Privacy Control	Browser settings that ask websites not to track you.
Pseudonymous	Linked to a random identifier rather than to your name or account.

[WEBSITE](#) > [SITE FEATURES](#) > [COOKIE CONSENT AND PRIVACY](#)

What the site measures

What the site measures with and without your consent, and how browser privacy signals are respected.

With Analytics consent

The site's own, first-party analytics may record usage events: the name of an event (such as a feature being used), the page's path, and a few small details. It does not record what you type into fields, email addresses,

or the query part of addresses. No third-party analytics scripts are used for this.

With the same consent, the site also measures whether a visit behaves like a person rather than an automated script, from how pointer and keyboard input vary during the visit. It does not record what you clicked, what you typed, where you came from or who you are.

Without Analytics consent

- No usage events are recorded.
- The site still counts that a page was viewed: the page's path and the site's host name, with nothing about how you used the page and no identifier stored on your device.

Browser privacy signals

If your browser sends **Do Not Track** or **Global Privacy Control**, the site's analytics stays off and page views are not counted at all, whatever your cookie choice.

Your preferences

Settings you choose (theme, language, accent colour, comfort options and similar) are kept in your browser's local storage so that the features work. They are not sent to Auric Artisan.

The full, binding descriptions are in the Privacy Policy at <https://auricartisan.com/legal/privacy/> and the Cookie Policy at <https://auricartisan.com/legal/cookies/>.

WEBSITE > SITE FEATURES > CUSTOM CURSOR

Custom cursor

The ring-and-dot pointer that follows your mouse on Auric Artisan, the shapes it takes, and how to turn it off.

On a computer with a mouse or trackpad, Auric Artisan replaces your system pointer with its own: a thin **ring** that follows your pointer smoothly, and a small **dot** at the exact point you are aiming. The ring changes shape to tell you what the thing under it does: it grows over links and buttons, becomes an I-beam over text, a double arrow over a resize handle, a crosshair over precise controls, and so on.

The ring also picks its colour from what is under it. It keeps the hue of the surface but pushes its lightness away from it, so the ring stays visible on a dark photo, a light page or a colourful canvas. Over grey or neutral surfaces it uses your accent colour.

The custom cursor is **on by default** and can be turned off at any time in Settings. It is never shown on touch screens, on devices without a hovering pointer, or when your device asks for reduced motion.

Who it is for

Mouse and trackpad users. If you prefer your system pointer, for example because you use a large or high-contrast system cursor, turn the custom cursor off.

Where to find it

Settings (**Ctrl** + **,**) > **Comfort** > **Custom cursor**.

Quick start

1. Move your mouse over a page. The ring and dot follow it.
2. Point at a link. The ring grows slightly.
3. Point at a paragraph of text. The ring becomes a tall, narrow I-beam.
4. Press **Ctrl** + **,**, select **Comfort**, and switch off **Custom cursor**. Your system pointer returns at once.
5. Switch it back on to see the ring again.

What you can do

- Turn the custom cursor on or off instantly.
- Read what a control does from the cursor's shape.

faq.md	Short answers

WEBSITE > SITE FEATURES > CUSTOM CURSOR

Get started with the custom cursor

How the custom cursor behaves, when it is hidden, and how to turn it off.

The two parts

- **The dot** is where you are pointing. Clicks happen at the dot.
- **The ring** trails slightly behind and changes shape to show what the element under it does.

How it reacts

- **Hover:** over links, buttons and other clickable things, the ring grows and softly glows (the "magnetic" look). Over text it becomes an I-beam.
- **Click:** the ring shrinks briefly.
- **Fast movement:** the ring stretches in the direction you move.
- **Rest:** when you stop moving for a moment, or the pointer leaves the window, the ring fades to half strength.
- **Loading:** while a page or tool is busy, the ring turns dashed and spins.
- **Colour:** the ring's colour follows the surface under it, and the dot switches between dark and light so it is always visible.

The full list of shapes is in the [Reference](#).

When the custom cursor is not shown

Your system pointer is used instead when:

- you switched off **Custom cursor** in Settings > Comfort;
- your device uses touch, or has no pointer that can hover (such as most phones and tablets);

- your device's reduced-motion setting is on;
- reading mode is on.

When the custom cursor is off, the site still shows the right system pointer: a hand over links and buttons, an I-beam over text fields, and a left-right arrow over sliders.

Turn it off or on

1. Press **Ctrl** + , and select **Comfort**.
2. Switch **Custom cursor** ("The ring and dot that follow your pointer. Turn off for your system cursor.") off or on.

The change is immediate, with no reload, and applies to every page and open tab.

WEBSITE > SITE FEATURES > CUSTOM CURSOR

Custom cursor reference

Every shape and effect of the custom cursor, and where each appears.

Shapes

Shape	Looks like	Appears over
Default	Round ring with a dot	Ordinary page areas
Pointer	Larger ring with a soft glow	Links, buttons and other clickable items
Text	Tall, narrow I-beam	Text and text fields
Grab	Rounded square	Things you can drag
Grabbing	Smaller rounded square	While dragging
Precision	Small ring	Sliders and vector graphics such as charts and diagrams
Canvas	Small dashed, spinning ring	Drawing and graphics areas in tools
Resize	Double-headed arrow, turned to the direction	Resize handles and split-view dividers (left-right, up-down or diagonal)
Move	Four-way arrow	Things you can move in any direction
Zoom in / Zoom out	Plus or minus in the ring	Images and areas you can zoom
Help	Question mark in the ring	Abbreviations and help items
Copy	Small plus at the ring's corner	Items that copy when clicked
Crosshair	Hairline cross in a tight ring	Pickers and crosshair areas
Not allowed	Red ring with a slash	Actions that are not allowed

Shape	Looks like	Appears over
Disabled	Faint, grey ring	Disabled controls
Loading	Dashed, spinning ring	While the page or a tool is busy

Effects

Effect	When
Magnetic glow	Over clickable items and draggable items
Shrink	On click
Stretch	During fast movement
Fade to half	When idle, or when the pointer leaves the window
Adaptive colour	Always: the ring takes the hue of the surface under it, lightened or darkened to stand out
Accent colour	Over grey and neutral surfaces
Dark or light dot	Chosen from the brightness of the surface under it

Setting

Control	Values	Default
Settings › Comfort › Custom cursor	On, off	On

WEBSITE › SITE FEATURES › CUSTOM CURSOR

Troubleshooting the custom cursor

Fixes for common custom cursor problems.

The cursor feels slow or lags behind

Why: the ring follows the pointer smoothly on purpose, and on a busy page or a slower computer it can fall further behind.

What to do: aim with the dot, which is exact. If the lag bothers you, switch off **Custom cursor** in Settings › Comfort.

I cannot see the cursor

Possible causes and fixes:

- The ring fades when you stop moving. Move the mouse.
 - The page is still loading. Wait a moment.
 - Switch off **Custom cursor** in Settings to use your system pointer.
-

My large or high-contrast system pointer is replaced

Why: the custom cursor hides the system pointer.

What to do: switch off **Custom cursor** in Settings > Comfort. Your system pointer, with its size and colour, returns everywhere on the site.

The custom cursor does not appear at all

Why: it is off in Settings, your device has no hovering pointer, your device asks for reduced motion, or reading mode is on. This is intended.

Screen recordings show a ring and dot

Why: the custom cursor is part of the page, so recordings of the page include it.

What to do: switch it off before recording, or use the recorder's **Highlight the cursor** option with the custom cursor off.

WEBSITE > SITE FEATURES > CUSTOM CURSOR

Custom cursor FAQ

Short answers about the custom cursor.

Does the custom cursor change where I click?

No. Clicks happen at the dot, exactly where your system pointer would be.

Does Reduce motion in Settings turn it off?

No. The custom cursor follows your device's reduced-motion setting, not the site's **Reduce motion** switch. Use the **Custom cursor** switch to turn it off.

Why does the ring change colour?

It reads the colour of the surface under it and picks a version of that colour that stands out, so it stays visible on any background.

Is it shown on my phone?

No. Touch screens use the device's normal behaviour.

Does it work in the installed app?

Yes, on computers with a mouse or trackpad, the same as in the browser.

WEBSITE > SITE FEATURES > CUSTOM CURSOR

Custom cursor glossary

Terms used in the custom cursor guides.

Term	Meaning
System pointer	The mouse pointer drawn by your operating system.
Ring	The outer part of the custom cursor that changes shape.
Dot	The small inner point of the custom cursor, where clicks land.
Hover	Resting the pointer over something without clicking.
Reduced motion	A device setting that asks apps and websites to limit animation.
Adaptive colour	The ring's colour, chosen from the surface under it so it stays visible.

WEBSITE > SITE FEATURES > CUSTOM CURSOR

Custom cursor privacy

What the custom cursor reads and stores.

- The cursor reads the colour of the page under the pointer, inside your browser, to choose its own colour. It does not record where you point or send pointer movements anywhere.
- Your on or off choice is kept in this browser as part of your settings.

WEBSITE > SITE FEATURES > CUSTOM CURSOR

Related to the custom cursor

- [Settings panel > Comfort options](#) — the **Custom cursor** switch.

- **Accessibility aids** — reading mode and other comfort settings.
- **Screen recorder** — its **Highlight the cursor** option.
- **Settings panel** — the accent colour the cursor uses on neutral surfaces.

WEBSITE > SITE FEATURES > EYE REST

Eye rest

Optional reminders that invite you to look away from the screen for a few seconds, on a schedule you choose.

Eye rest is an optional reminder to look away from the screen. When it is on, a small card appears after a set time on a page, "Time to look away", and invites you to rest your eyes for a few seconds. Select **Rest now** and the screen dims to a quiet horizon with one instruction: look at something about twenty feet away. A line on the horizon shrinks as the seconds pass, and when the rest is over the whole screen brightens, so you can tell it has finished without looking back at it.

Reminders are **off by default**. You choose how often they come (every 20, 35, 45 or 60 minutes) and how long each rest lasts (5 to 30 seconds). Every reminder can be put off with **Later**, silenced for the session, or turned off for good.

Who it is for

People who spend long stretches looking at colours, contrast checks or code on the site and want a gentle prompt to look away now and then.

Where to find it

Settings (**Ctrl** + **,**) > **Comfort** > **Eye-rest reminders**.

Quick start

1. Press **Ctrl** + **,** and select **Comfort**.
2. Switch on **Eye-rest reminders**.
3. Under **Reminder interval**, select **20m**.
4. Keep working on a page. After 20 minutes the card "Time to look away" appears.
5. Select **Rest now**. The screen dims; look at something far away until it brightens.
6. The page returns and the next reminder is scheduled.

What you can do

- Choose how often reminders come and how long each rest lasts.
- Start a rest straight from the reminder, or put it off with **Later**.
- End a rest early.
- Silence reminders for the rest of the session, or turn them off.

WEBSITE > SITE FEATURES > EYE REST

Get started with eye rest

Turn eye-rest reminders on, choose the interval, and turn them off again.

Turn reminders on

1. Press **Ctrl** + **,** to open Settings, then select **Comfort**.
2. Switch on **Eye-rest reminders** ("Gentle reminders to rest your eyes on a schedule.").
3. Under **Reminder interval** (minutes between reminders), select **20m**, **35m**, **45m** or **60m**.

The countdown starts at once. Changing the interval later restarts it.

How the countdown works

- The countdown runs while a page is open. It starts again whenever you load a page, including moving to another page or reloading.
- It keeps running while the tab is in the background, so a reminder can be waiting when you come back.
- After a reminder, the next countdown starts when you finish, end or put off the rest.

Turn reminders off

Any of these:

- **Settings** > **Comfort** > switch off **Eye-rest reminders**. This is the most reliable way.
- On a reminder card, select **Turn these off**.
- For this session only, select **Not this session** on a reminder card.

Note: Turn these off on the card stops the reminders but does not move the switch in Settings. If you later change any setting while that switch still shows on, the reminders come back. Switch it off in Settings as well to keep them off.

Next step

The [reminder](#) and the [rest](#) explains the card and the rest screen.

WEBSITE > SITE FEATURES > EYE REST

The reminder and the rest

What the eye-rest reminder card offers, how to change its timings, and what happens during and after a rest.

The reminder card

When the countdown ends, a card appears:

- **Time to look away**
- "You have been at this for 20 minutes. 30 seconds looking into the distance is enough." (with your own interval and rest length)
- **Rest now** and **Later**
- a quieter row: **Change**, **Not this session**, **Turn these off**
- a thin bar that empties over 60 seconds

If you do nothing, the card leaves by itself after 60 seconds (when the bar is empty), and the next countdown starts.

Button	What it does
Rest now	Starts the rest straight away
Later	Closes the card; the next reminder comes after a full interval
Change	Shows the timing options (below)
Not this session	No more reminders until you close this browser tab
Turn these off	Stops reminders (see the note in Getting started)

Change how often and how long

Select **Change**. The card becomes **How often, and how long**:

1. **Remind me every: 20m, 35m, 45m or 60m.** This changes the same setting as **Reminder interval** in Settings, and the card's sentence updates.
2. **Rest for: 5s, 10s, 15s, 20s, 25s or 30s.**
3. Select **Rest now** to start a rest with these timings, or **Later** or **Turn these off** below.

This view also leaves by itself after 60 seconds.

Note: The rest length you pick here applies until you move to another page or reload. It then returns to 30 seconds.

During the rest

- The screen fills with a dark sky and ground, divided by a horizon line.
- Above the line: **Look past the screen** — "Something about twenty feet away — a doorway, a window, the far wall. The screen will brighten when the rest is over."
- Below the line: the seconds remaining, counting down.
- The horizon line slowly shrinks towards the centre as the rest passes. With your device's reduced-motion setting on, it stays still.
- The floating buttons, kits, dock and info bars are hidden. The pointer stays visible.
- **End early** stops the rest. It does not turn reminders off; the next countdown starts.

When the rest ends

The whole screen brightens to a warm off-white, a change you can notice from the corner of your eye. It shows **Rest complete, Welcome back** and "Next reminder in 20 minutes." (with your interval). After about 2.6 seconds the page returns and the next countdown starts.

WEBSITE > SITE FEATURES > EYE REST

Eye rest reference

Every eye-rest control, value, default and message.

Settings panel (Comfort)

Control	Values	Default
Eye-rest reminders	On, off	Off
Reminder interval	20m, 35m, 45m, 60m	20m

Reminder card

Element	Text or values
Title	Time to look away
Sentence	"You have been at this for N minutes. S seconds looking into the distance is enough."
Main actions	Rest now, Later
Quiet actions	Change, Not this session, Turn these off
Auto-dismiss	60 seconds, shown by an emptying bar

Timing view (after Change)

Element	Values	Default
Title	How often, and how long	—
Remind me every	20m, 35m, 45m, 60m	Your Reminder interval
Rest for	5s, 10s, 15s, 20s, 25s, 30s	30s (resets on each page load)
Actions	Rest now; quiet Later, Turn these off	—
Auto-dismiss	60 seconds	—

Rest screen

Element	Text
Heading	Look past the screen
Instruction	"Something about twenty feet away — a doorway, a window, the far wall. The screen will brighten when the rest is over."
Countdown	Seconds remaining
Progress	Horizon line shrinking to the centre (still with reduced motion)
Button	End early

End screen

Element	Text
Kicker	Rest complete
Heading	Welcome back

Element	Text
Line	"Next reminder in N minutes."
Duration	About 2.6 seconds, then the page returns

What each way of stopping does

Action	Effect	Lasts
Later	Closes the card; next reminder after a full interval	Until the next reminder
End early	Stops the rest; next countdown starts	Until the next reminder
Not this session	No reminders	Until this browser tab is closed
Turn these off	No reminders	Until a setting change while the Settings switch is on
Settings switch off	No reminders	Until you switch it on

WEBSITE > SITE FEATURES > EYE REST

Troubleshooting eye rest

Fixes for common eye-rest problems.

I switched reminders on but none appear

Possible causes and fixes:

- The countdown restarts on every page load. If you move between pages often, a 20-minute reminder may never be reached. Stay on one page, or choose a shorter interval.
- You selected **Not this session** earlier in this tab. Open the site in a new tab.
- You selected **Turn these off** earlier. Switch **Eye-rest reminders** off and on again in Settings > Comfort.
- A few pages do not include the eye-rest reminder. Try another page.

Reminders came back after I turned them off

Why: **Turn these off** on the card does not change the switch in Settings. Changing any setting while that switch shows on brings the reminders back.

What to do: switch off **Eye-rest reminders** in Settings > Comfort.

The rest always lasts 30 seconds

Why: the **Rest for** choice lasts only until you move to another page or reload.

What to do: choose it again under **Change** on the card.

The horizon line does not move

Why: your device's reduced-motion setting is on, so the line stays still. The countdown number still shows the time left, and the screen still brightens at the end.

The screen went white at the end of a rest

That is the end signal. It lasts about 2.6 seconds, then the page returns.

WEBSITE > SITE FEATURES > EYE REST

Eye rest FAQ

Short answers about eye-rest reminders.

Why are reminders off by default?

They interrupt what you are doing, so the site leaves the choice to you.

Why twenty feet?

Looking into the distance gives your eyes a break from focusing close up. The reminder's wording follows the common "20-20-20" habit: every 20 minutes, look at something about 20 feet (6 metres) away for about 20 seconds. The site's default interval is 20 minutes and its default rest is 30 seconds.

Does eye rest work when the tab is in the background?

The countdown keeps running, so the reminder can be waiting when you return. It is shown on the page, not as a system notification.

Is eye rest the same as the screen saver?

No. Eye rest reminds you on a schedule while you work. The screen saver appears after you stop using the page for a while. See [Screen saver](#).

Can I trigger a rest without waiting?

Not directly. Choose the shortest interval, **20m**, or wait for the next reminder.

WEBSITE > SITE FEATURES > EYE REST

Eye rest: supporting material

Contents of the eye rest supporting files.

File	What it covers
glossary.md	Terms used in the eye rest guides

Eye rest has no keyboard shortcut. Use **Tab**, **Enter** and **Space** on the card's buttons.

WEBSITE > SITE FEATURES > EYE REST

Eye rest glossary

Terms used in the eye rest guides.

Term	Meaning
Reminder interval	How long a page is open before a reminder appears: 20, 35, 45 or 60 minutes.
Rest	The few seconds (5 to 30) during which the screen dims and invites you to look away.
Reminder card	The small card that appears when the interval ends: "Time to look away".
Horizon	The line across the rest screen that shrinks to show how much of the rest is left.
Dawn	The brightening of the whole screen that marks the end of a rest.
Session	The life of a browser tab; Not this session lasts until the tab is closed.
20-20-20	A common screen habit: every 20 minutes, look about 20 feet away for about 20 seconds.

WEBSITE > SITE FEATURES > EYE REST

Eye rest limits and accuracy

What eye rest does, what it does not do, and how precise its timings are.

- **Not medical advice.** Eye rest is a comfort reminder. It does not diagnose, treat or prevent any eye condition. If your eyes are uncomfortable, talk to an eye-care professional.
- **Per page.** The countdown runs per page and restarts whenever a page loads. It does not track your total screen time, or time spent in other apps or other websites.
- **Timings.** Reminders appear after the chosen interval measured from the page load or the previous reminder. Browsers may delay timers in background tabs, so a reminder in a background tab can arrive a little late.

- **Where it appears.** Only on auricartisan.com, and only in the tab where the countdown ran. It is not a system notification.
- **Rest length.** The **Rest for** choice is not saved and returns to 30 seconds on the next page load.

WEBSITE > SITE FEATURES > EYE REST

Eye rest privacy

What eye rest stores and sends.

- Your on or off choice and your interval are kept in this browser, as part of your settings. **Turn these off** is remembered in this browser too, and **Not this session** in this tab only.
- Eye rest does not record when you rest, how often you skip, or anything about your activity, and it sends nothing over the network.
- The cookie policy lists the eye rest preference under **Functional** storage.

- [Theme](#) — a dark theme can be easier on the eyes in low light.

WEBSITE > SITE FEATURES > FEEDBACK

Feedback

The occasional feedback prompt, the quick star rating, the six-question survey and bug reports, and how often the site asks.

Auric Artisan asks for feedback rarely and quietly. After you have spent twenty minutes of active time on a page, a small **Feedback** panel may appear: "You have been here a little while — how is it going?" You can give a star rating and a comment, open a six-question survey, or report a bug with details of what happened. You can also put it off with **Maybe later**, or tell the site never to ask again with **Don't ask again**.

Contact details are always optional. You can send any feedback anonymously, and adding your name or email is a separate, equal choice.

The site does not ask on pages where a prompt would get in the way: signing in, checking out, paying, or reading legal pages. After any prompt, it waits at least a week before asking again on this device.

To give feedback whenever you like, use the **Feedback** panel in the Feature Kit (see [Kits](#)).

Who it is for

Anyone with something to say: praise, a complaint, a missing feature, or a bug.

Where to find it

- The automatic prompt, occasionally, after twenty minutes of active use.
- The Feature Kit's **Feedback** panel, at any time.

Quick start

1. When the Feedback panel appears, select a number of stars (or press **1** to **5**).
2. The question below changes to suit your rating. Type an answer if you like.
3. Select **Continue**.
4. Choose **Send anonymously**, or **Add contact details** to give a name or email.
5. A thank-you message confirms that your feedback has been received.

What you can do

- Rate your experience from one to five stars, with an optional comment.
- Answer a short, optional six-question survey.
- Report a bug with what happened, what you expected, how to reproduce it, and how badly it affects you.
- Choose whether to be contacted.
- Put the prompt off, or stop it for good.

WEBSITE > SITE FEATURES > FEEDBACK

Get started with feedback

When the feedback prompt appears, and how to answer it, postpone it or stop it.

When the prompt appears

The automatic prompt can appear when all of these are true:

- you have spent **20 minutes** with the page visible in front of you (time in a background tab does not count);
- you are not on a sign-in, checkout, payment or legal page;
- you have not been asked, and have not answered, in the last week or more on this device (see the quiet periods below);
- you have not chosen **Don't ask again**.

The prompt is a small panel titled **Feedback**. It does not block the page.

Answer it

Select a star rating, optionally type a comment, and select **Continue**. Then choose **Send anonymously** or **Add contact details**. The full flow is in [Rate, survey and report a bug](#).

Put it off or stop it

Choice	What happens
Maybe later	Closes the panel; no automatic prompt for at least 7 days
Close (×) or Esc	Counts as dismissed; no automatic prompt for 14 days

Choice	What happens
Don't ask again	No automatic prompt ever again on this device
Sending feedback	No automatic prompt for 90 days

Even if you close the page while the prompt is open, the site waits at least 7 days before asking again.

Give feedback at any time

The automatic prompt is not the only way. Open the Feature Kit (**Ctrl** + **Shift** + **K**, or **Feature** in the page utilities bar) and choose **Feedback**. See [Kits](#).

WEBSITE > SITE FEATURES > FEEDBACK

Rate, survey and report a bug

Give a quick rating, choose whether to be contacted, answer the survey, or report a bug.

Quick rating

The panel asks "You have been here a little while — how is it going?" (or "How is Auric Artisan working for you?").

1. Select one to five stars, or press **1** to **5** (when you are not typing in the comment box).
2. The comment question changes with your rating:

Stars	Question	Hint
1	What went wrong? We would like to fix it.	The more specific, the better
2	What let you down?	What would have made this work for you?
3	What would move this from fine to good?	Optional
4	Anything that would have made it a five?	Optional
5	What worked well? It helps us keep it that way.	Optional

Before you rate, it reads "Anything you would like to add?".

3. With one or two stars, the **Report a bug** button is highlighted and reads **Something broke?**, in case a bug report fits better.
4. Select **Continue**. It becomes available once you have chosen a rating or typed a comment.

Choose whether to be contacted

The next screen asks "Would you like us to contact you about this feedback?" and notes that contact information is completely optional.

- **Send anonymously** sends your rating and comment straight away, without asking again.
- **Add contact details** shows two optional fields:
 - **Name** — optional ("How should we address you?", up to 120 characters);
 - **Email** — optional (`you@example.com`, up to 254 characters).

Select **Send feedback**, or **Back** to return. If the email does not look valid, the message reads "That email does not look right. Correct it, clear it, or go back to send anonymously."

Either way, a thank-you screen confirms "Thank you for your feedback" and closes by itself.

The survey

Select **Full survey** in the Feedback panel. **A few questions:** "Six questions, about a minute. Every answer is optional."

Question	Answer type
What brings you here most often?	One of: Design work, Development, Accessibility testing, Learning, Something else
How easy was it to find what you needed?	1 to 5
How would you rate the speed and performance?	1 to 5
How does the design feel to use?	1 to 5
Is anything missing that you expected to find?	Text ("A tool, an export format, a colour space...")
Anything you particularly liked?	Text (optional)

A counter shows how many you have answered, for example "3 of 6 answered". Select **Send answers**, or **Not now** to close. The thank-you screen reads "Your responses have been received."

Report a bug

Select **Report a bug** (or **Something broke?**) in the Feedback panel.

1. **What happened?** (required) — for example "Export HTML did nothing when I pressed it".
2. **What did you expect instead?** — for example "A file should download".
3. **How can we reproduce it?** — numbered steps.

4. **How badly does it affect you?** — **Minor**, **Normal** (default) or **Blocking**.

5. Select **Send report**. It becomes available once **What happened?** has text. **Cancel** closes the form.

What you type is saved as a draft on this device as you go. If you close the form and open it again, it reads "Restored what you had written earlier."

The report is sent with details of the page, so the problem can be reproduced: the page address, the window and screen size, your browser and platform, your language, the theme and, where available, a few recent error messages from the page. The thank-you screen reads "Your report has been received, with the page details attached. We review reports as part of improving the site."

When you are offline

Feedback you send while offline is kept on your device and sent when the connection returns.

WEBSITE > SITE FEATURES > FEEDBACK

Feedback reference

Every feedback screen, button, timing and message.

When the automatic prompt may appear

Condition	Value
Active time needed	20 minutes with the page visible
Pages where it never appears	Sign-in, checkout, payment and legal pages

WEBSITE > SITE FEATURES > FEEDBACK

Troubleshooting feedback

Fixes for common feedback problems.

The prompt never appears

Why: it needs 20 minutes of active time on one page, it does not appear on sign-in, checkout, payment or legal pages, it waits at least a week between prompts, and it stops for good after **Don't ask again**.

What to do: use the Feature Kit's **Feedback** panel whenever you want to give feedback.

I chose Don't ask again by mistake

Why: the choice is kept in this browser.

What to do: use the Feature Kit's **Feedback** panel, which is always available. Clearing the site's data in your browser also resets the choice.

Continue is greyed out

Why: it needs a star rating or a comment.

Send report is greyed out

Why: **What happened?** is required.

Pressing a number changed my rating

Why: the keys **1** to **5** set the rating when the comment box does not have focus.

What to do: click in the comment box before typing numbers.

I was offline when I sent feedback

It is kept on your device and sent automatically when you are back online.

WEBSITE > SITE FEATURES > FEEDBACK

Feedback FAQ

Short answers about giving feedback on Auric Artisan.

Do I have to give my name or email?

No. **Send anonymously** is always available and sends your feedback without contact details.

Will I get a reply?

Only if you add contact details and the team decides to follow up. A bug report is not a promise of a fix, but reports are reviewed.

Can I attach a screenshot or recording?

Not in the feedback panel. You can describe the problem, or contact the team through <https://auricartisan.com/company/contact/>.

Why does the site wait so long before asking?

So that it asks people who have actually used the site, and does not interrupt short visits.

Does the prompt appear on every device?

The timing and your choices are kept per browser, so each browser counts separately.

WEBSITE > SITE FEATURES > FEEDBACK

Feedback: supporting material

Contents of the feedback supporting files.

Feedback glossary

Terms used in the feedback guides.

Term	Meaning
Automatic prompt	The feedback panel the site shows by itself after 20 minutes of active use.
Active time	Time with the page visible on screen; time in a background tab does not count.
Quiet period	The time after a prompt during which the site does not ask again.
Anonymous feedback	Feedback sent without a name or email.
Bug report	A description of something that went wrong, sent with details of the page.
Severity	How badly a bug affects you: Minor, Normal or Blocking.
Draft	Text you have typed but not sent, kept on your device.

WEBSITE > SITE FEATURES > FEEDBACK

Feedback privacy

What feedback sends to Auric Artisan and what it keeps on your device.

Sent when you submit

- **Rating and comment:** your stars and what you typed, and the page you were on.
- **Survey:** your answers.
- **Bug report:** what you typed, the severity, and page details: the page address, window and screen size, browser and platform, language, theme, and recent page errors where available.
- **Contact details:** only if you choose **Add contact details** and fill them in.

Nothing is sent until you select a send button.

Kept on this device

- When you were last asked and how you answered (to respect the quiet periods and **Don't ask again**).
- Unsent bug-report drafts.
- Feedback waiting to be sent while you are offline.

To remove these, clear the site's data in your browser.

WEBSITE > SITE FEATURES > FEEDBACK

Related to feedback

Features and pages related to feedback.

- **Kits** — the Feature Kit's **Feedback** panel, available at any time.
- Contact page — <https://auricartisan.com/company/contact/>
- **Help** — support and contact across all products.
- **Screen recorder** — record what happened before you describe it.

WEBSITE > SITE FEATURES > GUIDE AND PAGE OUTLINE

Guide and page outline

The page guide opened with **?**, its guided tours, and the section rail on long company, legal and trust pages.

The **guide** is a help panel for the page you are on. Press **?** (or select the question-mark **Guide** button in the header) and it opens by saying what the page is and what it is for. It offers a **guided tour** of the page, which highlights each important area in turn with a short explanation; a map of the tour's stops; quick links to other parts of the site; and recommended paths for common jobs, such as running an audit or finding a tool. The guide remembers how far you got in each page's tour, so you can pick up where you left off.

Long company, pricing, legal and trust pages also have a **section rail**: a row of section links pinned under the header, labelled "On this page", which highlights the section you are reading and jumps to any other.

A third outline, the **Page outline** button in the navigation dock, lists any page's headings; it is described in [Navigation dock > Page outline](#).

Who it is for

- First-time visitors who want to know what a page does.
- Anyone who prefers a short walkthrough to exploring alone.
- Readers of long policy and company pages who want to jump between sections.

Where to find it

- Press **?** on any page (when you are not typing in a field).
- Select **Guide** (the question mark) in the header.
- In the mobile drawer, tap **Guide** (Tours and shortcuts) under **Your work**.
- In Spotlight, type **>** and choose **Open the page guide**.

The section rail appears by itself on the pages that have one.

Quick start

1. Open <https://auricartisan.com/tool/analyzer/> and press **?**.
2. The guide opens with **Analyzer guide** and a summary of the page.
3. Select **Take the guided tour**.
4. The first area of the page is highlighted with an explanation. Select **Next**, or press the **Right** arrow, to move on.
5. Press **Esc** to leave the tour at any point.
6. Press **?** again later: the tour card now offers **Pick up where you left off**.

What you can do

- Learn what any page is for, in one sentence.
- Take, pause, resume and replay a guided tour of the page.
- Jump straight to any tour stop.
- Filter the guide by typing, or by tab: All, Tour, Tools, Pages, Learn, Help.
- Follow quick links and recommended paths.
- Jump between sections of long pages with the section rail.

Get started with the guide

Open the page guide, learn its sections, and filter it.

Open and close the guide

- **Open:** press **?**, select **Guide** in the header, tap **Guide** in the mobile drawer, or choose **Open the page guide** in Spotlight's commands.
- **Close:** press **Esc**, select the X (**Close guide**) or the **ESC** button beside the filter box, or click outside the panel.

The guide opens only when you ask for it. It never opens by itself when you visit a page.

While the guide is open, **Tab** stays inside it.

The panel

From top to bottom:

1. **What this page is.** A kicker naming the kind of guide (for example **Home guide**, **Analyzer guide**, **Collections guide**, **Search guide**, **Workspace guide**, **Library guide**, **Tool guide**, **Company guide**, **Policy guide** or **Site guide**), the page's title, and a one-sentence summary.
2. **Filter box.** Type to narrow everything below. The placeholder reads "Filter this guide...".
3. **Tabs.** **All**, **Tour**, **Tools**, **Pages**, **Learn** and **Help**. Each shows only that kind of item. With a tab focused, **Left** and **Right** move between tabs.
4. **Tour card.** Starts, resumes or replays the guided tour of this page, with a progress bar (see **Guided tours**).

5. **On this page.** The tour's stops for this page, numbered. A tick marks stops you have already seen. Select a stop to start the tour there.
6. **Getting around.** The stops that are the same on every page (the header, search, your library, the theme button), folded under "The same stops on every page" with a count such as "2/4 seen". Once you have seen them all, the group starts folded.
7. **Elsewhere.** Quick links: **Full Search**, **Analyze a website**, **Find the right tool**, **Open saved work**, **Read documentation**, **Learn color concepts**, **Install the PWA** and **Install the extension**.
8. **Recommended paths.** Short recipes for common jobs: **Run a quick audit**, **Build color assets**, **Check accessibility** and **Find a feature fast**, most with numbered steps.
9. **Footer hints.** Type to filter, **↑** **↓** navigate, **↵** open, **ESC** close.

Find something in the guide

1. Open the guide and type a word, for example **export**.
2. Only matching items remain. If nothing matches: "Nothing in the guide matches that. Try a shorter word, another tab, or clear the box."
3. Press **Down** to move to the first result, then **Enter** to open it. Pressing **Enter** in the filter box opens the top match directly.

Home and **End** jump to the first and last item (when the filter box is not focused).

What the tabs contain

Tab	Shows
All	Everything
Tour	The tour card, the stops and the recommended paths
Tools	Quick links to tools (Analyze a website, Find the right tool)
Pages	Quick links to site pages (Open saved work)
Learn	Documentation and Learn links
Help	Full Search and the install links

WEBSITE > SITE FEATURES > GUIDE AND PAGE OUTLINE

Guided tours

Take a guided tour of any page, move through its stops, leave, resume, replay and skip.

A guided tour walks through the important areas of the page you are on. Each stop highlights one area and explains it in a small card beside it.

Start a tour

1. Press **?** to open the guide.
2. The tour card at the top reads **Take the guided tour**, with the number of stops, for example "11 stops · leave at any point".
3. Select it (its action reads **Start the tour**).

To start at a particular stop, select that stop under **On this page** or **Getting around**.

The tour card

What it shows	When
Take the guided tour — "N stops · leave at any point"	You have not taken this page's tour
Pick up where you left off — "You stopped at X of N · leave at any point", action Resume at stop X	You left this page's tour part-way
Replay the tour — "N stops on this page · you have finished this one"	You finished this page's tour
Start over from stop 1 (below the card)	You left part-way and want the whole tour again

A progress bar on the card shows how much of the tour you have seen. Progress is kept for each page separately.

If a page has nothing to tour, the guide says "This page has no tourable sections yet, but the paths below will still help you move around."

Move through a tour

The highlighted area is outlined on the page, which scrolls to bring it into view. The card beside it shows:

- a rail of dots, one per stop;
- the position, for example "3 of 11", and whether the stop is about this page or the whole site;
- the stop's title and explanation;
- sometimes a note;
- **What to look for**: a list of details you can open.

Controls:

Control	Key	What it does
Next	Right	Next stop
Back	Left	Previous stop (unavailable on the first stop)
Finish	—	On the last stop, ends the tour and marks it finished

Control	Key	What it does
X (Leave the tour)	Esc	Leaves the tour; your place is remembered
Skip to this page's N stops	—	Shown on the site-wide stops at the start, to jump to the stops about this page

While the tour is running, **Tab** stays inside the tour card.

The stops every page shares

Every tour includes a few stops about the site itself, the same everywhere:

- **Start from the top** — the header;
- **Search when the path is unclear** — search and **Ctrl** + **K**;
- **Keep useful work close** — your library and workspace;
- **Match the viewing mode** — the theme button;
- **Use footer links for trust and support** — the footer.

Once you have seen them, the guide folds them away under **Getting around**, and **Skip to this page's N stops** lets you pass them.

When an eye rest appears

A tour is hidden while an eye rest is on screen, and reappears afterwards.

WEBSITE > SITE FEATURES > GUIDE AND PAGE OUTLINE

The section rail

Use the "On this page" section rail on long company, pricing, legal and trust pages.

Long pages about the company, pricing, policies and security have a **section rail**: a row of links to the page's sections, labelled "On this page", near the top of the page.

Where it appears

- Company pages: About, Pricing, Accessibility and FAQ.
- Every legal page, such as Privacy, Terms, Cookies, Refund Policy, Licenses, Security, Transparency, Acceptable Use Policy, Content & Intellectual Property, Data Retention & Deletion, Subscription & Billing and the Extension privacy policy.
- The Trust Center at <https://auricartisan.com/security/>.

How it behaves

- **Pinned.** As you scroll down, the rail sticks just below the site header, so it is always in reach. It gains a shadow once it is pinned.
- **Shows where you are.** The link for the section you are reading is highlighted. A section counts as "current" once its heading has passed a line a little below the rail.
- **Jumps.** Select a link to scroll to that section. On legal pages, whose sections can be folded, jumping to a folded section opens it.
- **Narrow screens.** The rail scrolls sideways, and keeps the current section's link in view.
- **At the very end** of the page, the last section is highlighted.

The links are ordinary page links, so they also work with the keyboard (**Tab** and **Enter**), and you can copy one to share a link straight to a section. Opening such a link on a legal page opens that section.

Other outlines

- The navigation dock's **Page outline** lists the headings of any page. See [Navigation dock > Page outline](#).
- The guide's **On this page** lists the tour's stops. See [Guided tours](#).

Stored

Per-page tour progress (furthest stop reached and whether you finished) is kept in this browser.

WEBSITE > SITE FEATURES > GUIDE AND PAGE OUTLINE

Troubleshooting the guide and section rail

Fixes for common problems with the guide, tours and section rail.

Pressing **?** does nothing

Possible causes and fixes:

- The cursor is in a text field. Click an empty part of the page first.
 - A modifier key is held, or your keyboard layout needs **Shift** for **?** (that is fine) but also another key such as **Alt Gr** (which is not). Use the header's **Guide** button instead.
 - The page is still loading. Wait a moment.
 - A tour or the guide is already open.
-

The tour highlights nothing, or the wrong place

Why: a stop points at an area the page has not shown yet, for example one that loads late, is hidden on small screens or is folded away.

What to do: select **Next** to move on, or widen the window and try again.

The tour card says I finished, but I want to see it again

Select **Replay the tour**.

The tour starts in the middle

Why: you left part-way through last time. The card offers **Pick up where you left off**.

What to do: select **Start over from stop 1**.

The section rail covers part of a heading after jumping

Why: on some pages the header scrolls away during the jump, leaving the heading slightly lower than expected.

What to do: scroll a little; the correct section stays highlighted.

A legal section stayed folded

What to do: select its heading to open it. Jumping from the rail or a direct link normally opens it for you.

WEBSITE > SITE FEATURES > GUIDE AND PAGE OUTLINE

Guide and page outline FAQ

Short answers about the guide, tours and section rail.

Will the guide pop up by itself?

No. It opens only when you press  or select a Guide button.

Is the tour the same on every page?

No. Each kind of page (home, analyzer, collections, search, workspace, library, tools, company and policy pages) has its own stops, plus a few site-wide stops shared by all.

Does finishing one page's tour mark others as finished?

No. Progress is kept separately for each page.

What is the difference between the three outlines?

The **guide** explains the page and tours it. The **section rail** is the pinned row of section links on long company, legal and trust pages. The navigation dock's **Page outline** lists the headings of any page.

Is the guide available in Hindi?

Yes. When the site is in Hindi, the guide and its tours are shown in Hindi.

Guide and page outline glossary

Terms used in the guide and page outline guides.

Term	Meaning
Guide	The help panel for the current page, opened with <code>?</code> .
Guided tour	A step-by-step walk through a page's important areas.
Stop	One step of a tour, highlighting one area of the page.

Term	Meaning
Site-wide stops	Tour stops about the header, search, library, theme and footer, the same on every page.
Recommended path	A short recipe in the guide for a common job.
Section rail	The pinned "On this page" row of section links on long company, legal and trust pages.
Folded section	A section of a legal page that shows only its heading until opened.

WEBSITE > SITE FEATURES > GUIDE AND PAGE OUTLINE

Guide privacy

What the guide remembers.

- The guide keeps, in this browser, whether you have opened it and how far you got in each page's tour. This is what lets it offer **Pick up where you left off**.
- Nothing about your use of the guide or tours is sent to Auric Artisan.
- The section rail stores nothing.

WEBSITE > SITE FEATURES > GUIDE AND PAGE OUTLINE

Related to the guide and outlines

Features related to the guide and outlines.

- **Navigation dock** — the **Page outline** button.
- **Search and Spotlight** — find any page; **Open the page guide** command.
- **Header and navigation** — the **Guide** button and drawer tile.
- **Company and legal** — the pages with the section rail.
- **Getting started with Auric Artisan** — a first tour of the whole site.

WEBSITE > SITE FEATURES > HEADER AND NAVIGATION

Header and navigation

The site header, its menus and quick tools, the mobile drawer, the page utilities bar and the footer.

Every page on auricartisan.com opens with the same header. On a computer it shows the Auric Artisan name, three menus (**Company**, **Tools** and **Learn**), a row of quick tools (the app, the browser extension, the VS Code extensions, search, the guide, your library, language and theme) and a **Sign in** button. On a phone or a narrow window, the menus and tools fold into a drawer that opens from the menu button, with every item labelled.

Two more pieces of navigation float over every page. The **page utilities bar** sits at the bottom-left: one button that opens a row of launchers for the kits, the navigation dock and Settings. The **navigation dock** is a slim rail on the left or right edge with Back, Forward, Reload and scrolling controls; it has its own guide in [Navigation dock](#).

At the bottom of every page, the **footer** gathers product links, policies, trust pages, contact details and social links.

Who it is for

Everyone who visits the site. The header is the quickest way to find a tool, the documentation or your saved work, and to switch theme or language.

Where to find it

- The header is at the top of every page. It stays pinned to the top as you scroll (except in reading mode).
- The page utilities bar button is at the bottom-left corner of the window.
- The footer is at the end of every page.

Quick start

1. Select **Tools** in the header. A menu opens listing every tool, grouped under headings such as **Core tools** and **Colour science**.
2. Select a tool, for example **Vision Simulation**, to open it. The menu closes.
3. Select the magnifier (**Search**) to open Spotlight search, or press **Ctrl** + **K**.
4. Select the sun or moon button to switch between light and dark.
5. On a phone, tap the three-line menu button. The drawer opens with **Browse**, **Your work**, **Get Auric** and **Preferences**.
6. Select the page utilities button at the bottom-left, then **Settings**, to open the Settings panel.

What you can do

- Reach every company page, every tool and every learning and library page from three menus.
- Open search, the guide and your library from any page.
- Download the app, the browser extension or the VS Code extensions.
- Switch language and theme in one click.
- Sign in, or reach your account once signed in.
- Use a labelled drawer on small screens, with tools grouped behind chips.
- Launch the kits, the navigation dock and Settings from the page utilities bar.

troubleshooting.md	Symptoms, causes and fixes
faq.md	Short answers

WEBSITE > SITE FEATURES > HEADER AND NAVIGATION

Get started with the header and navigation

Find your way around the header, the page utilities bar and the footer on any page.

A tour of the page frame

Every page has the same frame around its content:

1. **Header** (top). The Auric Artisan name on the left returns you to the homepage. The rest depends on the width of your window:
 - **960 pixels wide or more:** the **Company**, **Tools** and **Learn** menus, the quick-tools icons and **Sign in**.
 - **Narrower than 960 pixels:** a **Search** button and the three-line menu button, which opens the drawer.
2. **Info bars** (below the header, homepage by default). Optional strips such as the announcements bar and the clock strip. See [Info bars and notices](#).
3. **Page content**.
4. **Floating controls**. The page utilities button at the bottom-left, and the navigation dock on the left or right edge.
5. **Footer** (bottom).

Open a tool from the header

1. Select **Tools** in the header.
2. The menu lists **All Tools** under **Overview**, then the tools under group headings: **Core tools**, **Creative utilities**, **Colour science**, **Gamut & rendering**, **Perception**, **Spectral** and **Utilities**.
3. Scroll the menu if needed. While there is more below, a **SCROLL DOWN** hint shows at its foot.
4. Select a tool.

Result: the tool page opens. The menu closes by itself.

Open a tool on a phone

1. Tap the three-line button at the top right. The drawer opens.
2. Under **Browse**, tap **Tools**. The section opens in place and shows a row of group chips, each with a count.
3. Tap a chip, for example **Utilities**. Only that group's tools are listed, with **All Tools** always at the top.
4. Tap a tool.

Result: the tool page opens and the drawer closes.

Get back to where you were

- Select the Auric Artisan name to go to the homepage.
 - Use the navigation dock's **Back** button, your browser's back button, or **Alt + Left**.
 - Right-click the page and use **Back** in the quick bar.
-

Find something without the menus

- Select **Search** in the header, or press **Ctrl + K**, and type what you want. See [Search and Spotlight](#).
- Select **Guide** (the question mark), or press **?**, for a map of the page and its tour. See [Guide and page outline](#).

WEBSITE > SITE FEATURES > HEADER AND NAVIGATION

The desktop header

Use the Company, Tools and Learn menus and the quick-tools icons in the header on wide screens.

On windows 960 pixels wide or more, the header shows everything in one row: the brand, three menus, the quick-tools icons and **Sign in**.

The brand

Auric Artisan with the tagline **Colour intelligence studio**. Select it to return to the homepage.

The three menus

Select **Company**, **Tools** or **Learn** to open a menu below it. Each entry has a picture or icon, a name and a one-line description. Only one menu is open at a time.

Menu	Groups	Entries
Company	Company	About, Timeline, Pricing, Accessibility, FAQ, Contact
Tools	Overview	All Tools
	Core tools	Portfolio Builder, Portfolio Index, Analyze URLs, Vision Simulation, Design System Generator, Color Science Lab, Basic Tools, Personalization Generator
	Creative utilities	Image Picker, Font Library, Icon Library, Generate ASCII Art, Generate Ishihara Plates
	Colour science	Illuminants, Chromatic Adaptation, Gamut Mapping
	Gamut & rendering	Gamut Explorer, HDR Gamut Plot, Tonal Steps, Tints & Shades, Tone Mapping
	Perception	Perception & Vision, Neuroscience, Psychophysics Engine
	Spectral	Material Lighting, Industrial Dye Chemistry
	Utilities	LUT Lab, ICC Parser, Collage Maker, M-Gradient Palette, SVG Recolor
Learn	Learn	Learning Hub, Accessibility Compliance, Blog, Documentation, Changelog
	Libraries	Color Library, Palette Library, Gradient Library, Harmony Library, Shade Library, Accessibility Library
	Workspace	My Library

The full list with every destination is in the [Reference](#).

How the menus behave

- A menu opens below its button, or above it if there is not enough room below. It lines up with the right edge of its button, or the left edge near the side of the window.
- A tall menu scrolls inside itself. A **SCROLL DOWN** hint shows while there is more to see.
- Selecting an entry opens that page. Clicking anywhere outside the menu, or moving keyboard focus out of it, closes it.

With the keyboard

Keys	What they do
Tab to a menu button, then Enter or Space	Open or close that menu
Down on a menu button	Open the menu and move to its first entry
Up on a menu button	Open the menu and move to its last entry
Down / Up inside a menu	Next or previous entry, wrapping round
Home / End inside a menu	First or last entry
Esc	Close the menu and return focus to its button

The quick-tools row

To the right of the menus is a row of icon buttons. Hover or focus one to see its tooltip.

Icon	Tooltip	What it does
Grid with a plus	Browser PWA	Opens the Download page to install the site as an app (see Download and offline)
Puzzle piece	Browser Extension	Opens the browser extension page
Code brackets	VS Code Extensions	Opens the VS Code extensions page
Magnifier	Search	Opens Spotlight search (Ctrl + K)
Question mark	Guide	Opens the page guide (?)
Book and bookmark	Library	Opens your saved palettes, gradients, presets and exports
Globe	Language / भाषा	Switches the site between English and Hindi
Sun or moon	Theme	Switches between light and dark mode

The theme button shows a moon while the page is light (select it to go dark) and a sun while the page is dark. Its behaviour is explained in [Theme](#). The globe is explained in [Language](#).

Sign in

Sign in opens the sign-in page, where you can also create a free account. Once you are signed in, the button is replaced by your account menu. Accounts are covered in [Account and billing](#).

When the header scrolls

The header stays pinned to the top of the window as you scroll. In reading mode it scrolls away with the page, to leave more room for text.

WEBSITE > SITE FEATURES > HEADER AND NAVIGATION

The footer

Every section and link of the footer at the bottom of each page.

The footer closes every page. It has four parts.

Introduction

- The Auric Artisan logo (links to the homepage) and the statement "Color intelligence. Crafted for everyone."
- The **Start a conversation** card: "Questions, collaborations, or support?" with an **Email our studio** link to hello@auricartisan.com, and **Explore our portfolio, LEACB**, which opens the studio's portfolio site in a new tab.

Right-click the Start a conversation card for a small menu: **Email us**, **Copy email**, **Copy link** and **LEACB**. See [Other right-click menus](#).

Directory

Under the heading "Tools, policies, and useful links", four numbered columns:

Column	Links
01 Product	Tools, Learn, Blog, Portfolios, API, Search Console, Download
02 Explore	Privacy, Terms, Cookies, Refund Policy, License
03 Policies	Acceptable Use Policy, Content & Intellectual Property, Data Retention & Deletion, Transparency, Subscription & Billing
04 Trust	Trust Center, Security, Accessibility, Contact

Bottom row

- The copyright line and "Design and development by Auric Artisan", with the company's registered address.
- Social links, each opening in a new tab: Product Hunt, LinkedIn, GitHub and X.

- **Made with care · Built in India**, with a small 3D Indian flag. Double-click the flag to play a short celebration animation. On Indian festival days, a festival greeting appears beside it.

Closing note

"Company registered in India. Product names, logos, and brands remain the property of their respective owners."

The mobile drawer

Use the navigation drawer on phones, tablets and narrow windows, including tool chips, theme and language switches.

When the window is narrower than 960 pixels, for example on a phone, a tablet in portrait, or a narrow desktop window, the header menus and quick tools move into a **drawer**. The drawer is the same content as the desktop header, with every item labelled in words.

The bar

The header bar on a narrow screen holds:

- the **Auric Artisan** name (to the homepage);
 - a **Search** button. On screens 600 pixels wide or more it also shows the word "Search" and a **Ctrl K** hint; on phones it is an icon;
 - your account button, once you are signed in;
 - the menu button (three lines). Its label is **Open navigation**, and **Close navigation** while the drawer is open, when it shows an X.
-

Open and close the drawer

1. Tap the menu button. The drawer opens:
 - on phones, as a full-width sheet from under the bar to the bottom of the screen;
 - on screens from 600 to 959 pixels wide, as a sheet 400 pixels wide on the right.
 2. While it is open, the page behind it does not scroll, and the floating buttons are hidden.
 3. To close it, tap the menu button again, tap the dimmed page outside the drawer, press **Esc**, or open any link in it. It also closes if you widen the window past 960 pixels or go back or forward in your history.
-

What is in the drawer

From top to bottom:

Search field

Search tools, colours and pages. Tap it to open Spotlight search.

Browse

Company, Tools and **Learn**, each with a count of its entries. Tap one to open it in place, like an accordion. Opening one section does not close the drawer, and tapping a switch further down does not fold the section away.

In **Tools**, a row of **group chips** sits above the list: **Core tools**, **Creative utilities**, **Colour science**, **Gamut & rendering**, **Perception**, **Spectral** and **Utilities**, each with a count. Only the selected group's tools are listed, with **All Tools** always at the top. The drawer selects the group of the page you are on, or **Core tools** if you are not on a tool page. Tap another chip to switch group.

Your work

- **Library** — Saved palettes and exports. Opens your library panel.
- **Guide** — Tours and shortcuts. Opens the page guide.

Get Auric

- **The app** — Works offline in a browser tab. Opens the Download page.
- **Browser extension** — The Auric toolbar in your browser.
- **VS Code** — Icon collections and colour themes.

Preferences

- **Theme: Auto, Light, Dark.** **Auto** follows your device, like **System** in the Settings panel.
- **Language: English, हिन्दी.** Each language is written in its own script, so you can find yours even if you cannot read the current one.

The highlighted buttons always show your current choice, including changes made elsewhere, such as in Settings.

Account

Pinned to the foot of the drawer: **Sign in** and **Create account** when you are signed out, or your account once you are signed in.

With the keyboard

The drawer works with **Tab**, **Enter** and **Space** like the rest of the page. Inside an open section, **Up**, **Down**, **Home** and **End** move between the visible entries. **Esc** closes an open section first, then the drawer, and returns focus to the menu button.

WEBSITE > SITE FEATURES > HEADER AND NAVIGATION

The page utilities bar

Open the launcher bar at the bottom-left of every page to reach the kits, the navigation dock and Settings.

The **page utilities bar** is a single round button at the bottom-left corner of every page. Select it to open a bar of labelled launchers:

Launcher	Opens
Feature	The Feature Kit
Menu	The Menu Kit
Advanced	The Advanced Kit
Status	The Status Kit
Library	The Library Kit
Navigate	The navigation dock (Back, Forward, Reload, outline, split view and more)
Settings	The Settings panel

The kits are documented in [Kits](#), which also covers this bar in more depth. The dock is documented in [Navigation dock](#), and the panel in [Settings panel](#).

Open and close the bar

1. Select the button at the bottom-left. Its tooltip reads **Page utilities**: "Show navigation, settings, and the Feature, Menu, Advanced, Status and Library kits."
2. The bar opens along the bottom of the window. The first button now reads **Close (Hide page utilities)**.
3. Select a launcher. The bar closes and that kit or panel opens.

To close the bar without choosing, select **Close**, press **Esc**, or click anywhere else on the page. Closing the bar does not close a kit you already opened; an open kit's launcher stays visible so you can close the kit from it.

On a phone

On screens up to about 580 pixels wide the bar fills the width of the screen in two rows: the five kits, a thin line, then **Navigate**, **Settings** and **Close**. The page leaves room at its end so the bar does not cover the last lines of content.

On a phone, the navigation dock has no button of its own on the screen; **Navigate** in this bar is the way to open it.

Things to know

- The bar is hidden while the screen saver, an eye rest or the mobile drawer is showing. In reading mode the kit launchers are hidden.
- Each kit also has a keyboard shortcut (for example **Ctrl** + **Shift** + **L** for the Library Kit). See [Keyboard shortcuts](#).

Header and navigation reference

Every header menu entry, quick tool, drawer control and utilities-bar launcher, with its destination.

Addresses are relative to <https://auricartisan.com>.

Troubleshooting the header and navigation

Fixes for common problems with the header, the drawer, the page utilities bar and the footer.

The header shows a menu button instead of Company, Tools and Learn

Why: your window is narrower than 960 pixels, or your browser is zoomed in far enough to make the page that narrow.

What to do: use the drawer, or widen the window or zoom out (**Ctrl** + **-**) to see the full header.

A header menu closed before I could click an entry

Why: menus close when keyboard focus or a click moves outside them.

What to do: open the menu again and select the entry directly. On a touch screen, use the drawer, whose sections stay open until you close them.

I cannot see the bottom of a long menu

Why: tall menus scroll inside themselves.

What to do: scroll inside the menu. The **SCROLL DOWN** hint shows while more entries are below.

The page does not scroll while the drawer is open

Why: this is intended, so that swiping inside the drawer does not move the page behind it.

What to do: close the drawer with the menu button, **Esc**, or a tap on the dimmed area.

The floating buttons disappeared

Why: the page utilities button and other floating buttons are hidden while the mobile drawer, the screen saver or an eye rest is showing.

What to do: close the drawer, move the mouse or press a key to leave the screen saver, or finish or end the eye rest.

The theme buttons in the drawer do not match what I see

Why: the drawer shows the stored choice: **Auto** follows your device, so a dark page can show **Auto** selected.

What to do: select **Light** or **Dark** to fix the theme regardless of your device.

The Library button does nothing

Why: the library panel loads a moment after the page.

What to do: wait until the page has finished loading and select it again, or use **Ctrl** + **Shift** + **L**.

WEBSITE > SITE FEATURES > HEADER AND NAVIGATION

Header and navigation FAQ

Short answers about the header, drawer, page utilities bar and footer.

Is there a page that lists every tool?

Yes. **All Tools** at the top of the Tools menu opens <https://auricartisan.com/collections/>, which shows every tool with filters.

Do the menus open when I hover over them?

No. They open when you click or tap their button, or press **Enter**, **Space** or **Down** on it, and they stay open until you choose an entry or move away.

Can I hide the page utilities bar?

The bar collapses to a single button when you close it, and that button cannot be removed. Reading mode hides the kit launchers.

Where is the navigation dock on my phone?

On phones the dock has no button of its own. Open the page utilities bar and select **Navigate**.

What does the flag in the footer do?

Double-click it to play a short celebration animation. It does nothing else.

How do I contact Auric Artisan?

Use **Email our studio** in the footer (hello@auricartisan.com), or the **Contact** page in the Company menu.

WEBSITE > SITE FEATURES > HEADER AND NAVIGATION

Header and navigation glossary

Terms used in the header and navigation guides.

Term	Meaning
Header	The strip at the top of every page with the brand, menus, quick tools and sign-in.
Menu (header)	The Company, Tools or Learn list that opens below its button.
Quick tools	The row of icon buttons in the header: app, extension, VS Code, search, guide, library, language, theme.
Drawer	The sliding sheet that holds the header's contents on narrow screens.
Breakpoint	A window width at which the layout changes. The header's is 960 pixels.
Group chip	A button in the drawer's Tools section that shows one group of tools at a time.
Page utilities bar	The launcher bar at the bottom-left for the kits, the navigation dock and Settings.
Kit	A floating panel of extra tools, such as the Feature Kit or Library Kit.
Navigation dock	The slim floating rail with Back, Forward, Reload, outline and scroll controls.
Footer	The section at the end of every page with directory links, contact details and social links.
PWA	Progressive web app: a website you can install and run like an app, with offline support.

WEBSITE > SITE FEATURES > HEADER AND NAVIGATION

Header and navigation privacy

What the header, drawer and page utilities bar remember, and what they send.

- The header's menus and the drawer do not store anything themselves.
- The **Theme** and **Language** switches in the header and drawer store your choice in this browser, the same way the Settings panel does.
- The header checks whether you are signed in, so it can show your account menu instead of **Sign in**. For visitors who are not signed in, no account request is made.
- The page utilities bar does not store whether it was open.
- The footer's social links open other websites (Product Hunt, LinkedIn, GitHub, X) in a new tab only when you select them. **Explore our portfolio**, **LEACB** opens the studio's own portfolio site.

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Info bars and notices

The welcome, announcement and quick-links bars, the clock strip, hero notice, demo chips, the first-visit welcome and the site's status messages.

Around the content of a page, the site can show a few slim strips and small notices:

- the **welcome bar**, which cycles through short introductions to the platform;
- the **announcement bar**, with the latest news, such as roadmap updates and offline support;
- the **quick-links bar**, a scrolling row of cards for Documentation, Changelog, Timeline, Blog and Learn;
- the **clock strip**, a live clock with the date and your time zone;
- the **hero notice** on the homepage, and **demo chips** that mark live or demo sections.

By default the three bars appear on the homepage only, and the clock strip is off, so ordinary pages start with their own content. Every bar and notice has a × to hide it, and the Settings panel's **Highlights** section switches each one on or off, for the homepage or for every page.

The site also shows short **status messages**: a brief welcome animation on your first visit, "Offline mode" and "Back online" when your connection changes, and prompts when the installed app has an update.

Who it is for

Everyone. Keep the bars if you like to see news and shortcuts; hide them for a quieter page.

Where to find it

- The bars and the clock strip appear under the header.
- Their switches are in **Settings** (**Ctrl** + **,**) > **Highlights**.
- Right-click a bar or the clock strip for its own small menu.

Quick start

1. Open the homepage. The announcement bar sits under the header, cycling its messages.
2. Point at the bar: it pauses. Select a message to open it.
3. Select the × at the end of the bar. It disappears from every page.
4. Press **Ctrl** + **,**, select **Highlights**, and switch **Announcement bar** back on. It now shows on every page.
5. Switch on **Clock strip**. A live clock appears under the header.
6. Right-click the clock and choose **24h**.

What you can do

- Show or hide each bar on the homepage only, on every page, or nowhere.
- Pause a bar by pointing at it; open, copy or hide it from its right-click menu.
- Show a live clock and set its format, date style, weekday, zone label and time zone.
- Hide the hero notice and the demo chips.

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Get started with info bars and notices

What bars and notices appear where, and how to show or hide each one.

What appears by default

Item	Default
Welcome bar	Homepage only
Announcement bar	Homepage only
Quick-links bar	Homepage only (also at the foot of the Collections page)
Clock strip	Off
Hero notice	On (homepage)
Demo chips	On (where a page has them)

On every page, the announcement bar sits directly under the header, followed by the clock strip, then the page content.

Hide something

Select the ✕ at the end of a bar, on the hero notice, or on a demo chip. It disappears at once, and the matching switch in Settings > **Highlights** turns off. A demo chip's ✕ hides every demo chip on the site.

Show something again, or everywhere

1. Press **Ctrl** + , and select **Highlights**.
2. Switch on the item you want.

For the three bars, switching on shows the bar on **every** page. To return to the homepage-only default, select **Restore section defaults**. Details are in [Settings panel > Highlights and clock](#).

Changes apply everywhere at once

A change made with a **×** or in Settings applies straight away to every page, including pages already open in other tabs.

In reading mode and the screen saver

The bars and the clock strip are hidden in reading mode and while the screen saver is showing.

[WEBSITE](#) > [SITE FEATURES](#) > [INFO BARS AND NOTICES](#)

The clock strip

Show a live clock under the header and set its format, date, weekday, zone label and time zone from its own menu.

The clock strip is a live clock under the header. It is **off by default**.

Turn it on

1. Press **Ctrl** + , and select **Highlights**.
2. Switch on **Clock strip** ("Off by default. Turn this on for a live clock, date and timezone above every page.").

It appears under the header (and under the announcement bar, if shown) on every page.

What it shows

- The flag of your time zone's country, or a globe for other zones.
- The zone's name, for example "India Standard Time" (it reads **Local time** for a moment while the clock starts). "(default)" is added when the site could not match your zone and used a close one.
- The time, ticking every second, for example **10:42:07 AM**.
- The date, the weekday, and the zone's abbreviation with its offset from UTC, for example "EDT · UTC-4" for New York in summer. Where the browser has no abbreviation for a zone, the offset is shown in both places.

Screen readers can read the time on demand; it is not announced every second.

The Clock settings menu

Right-click anywhere on the clock strip to open **Clock settings**:

Part	Options
Preview	The clock and date as they will look
Format	12h, 24h
Date	Long, D/M/Y, M/D/Y, ISO
Show	Seconds, Weekday, Zone (each on or off)
Time zone	A search box ("Search time zone...") and a list: Auto-detect , then common cities with their offsets
Reset	Returns the clock to its defaults
All settings →	Opens Settings on the Clock section

Each change applies at once to the strip and the preview.

Pick a time zone

1. Right-click the strip.
2. Under **Time zone**, choose a city from the list, or type part of a city, zone or region name (for example **tokyo** or **Europe**). Up to 60 matches are listed; if none match, the list reads "No zones match."
3. Select a zone. The strip switches to it; the list marks your current choice.

Choose **Auto-detect** to follow your device's zone again.

Reset

Reset returns the format to 12-hour, shows seconds, weekday and zone, sets the date to **Long**, and returns the zone to **Auto-detect**.

How it relates to Settings › Clock

The clock strip and **Settings › Clock** share the same choices: 24-hour time, seconds, date format and time zone. A change in one shows in the other. The menu adds three choices that Settings does not have: the **ISO** date format, and the **Weekday** and **Zone** switches. Settings adds **Show date**, which hides the date line.

Turn it off

Switch off **Clock strip** in Settings › Highlights.

The info bars

Use the welcome, announcement and quick-links bars, pause them, open their links and hide them.

The welcome bar

A single-line bar that shows one message at a time and cross-fades to the next every six seconds. Its seven messages introduce the platform: colour science, colour-space tooling, accessibility, vision simulation, palettes, research tools such as Ishihara plates, and what comes next. Each message links to the welcome article on the blog. Hover a message for a short tooltip.

The announcement bar

Also one message at a time, every six seconds. It carries the latest platform news, for example:

- "New library updates and workflow improvements are in progress — read the roadmap." (to the roadmap article)
- "Every tool works offline — install Auric Artisan as an app from the Download page." (to the Download page)
- "Early access: accounts, pricing, and sync are rolling out in stages." (to the roadmap article)

Highlighted messages are featured news.

The quick-links bar

A row of cards that scrolls continuously across the page:

Card	Subtitle	Goes to
Documentation	Guides & API reference	/library/documentation/
Changelog	What's new lately	/library/changelog/
Timeline	Milestones & history	/company/timeline/
Blog	Posts & site news	/library/blog/
Learn	Tutorials & resources	/library/learn/

Pausing and motion

- Point at the welcome or announcement bar to pause it on the current message. It resumes when you move away.
- Rotation also pauses while the tab is hidden.

- With **Reduce motion** on (Settings › Comfort) or your device's reduced-motion setting, messages change instantly instead of fading.

Hide a bar

Select the ✕ at the end of the bar (**Hide this bar (re-enable in Settings)**). The bar is hidden on every page, and its switch in Settings › Highlights turns off.

Note: The tooltip on the ✕ says "Turn it back on in Settings → Comfort". The switches are in the **Highlights** section.

The bar's right-click menu

Right-click a bar, or a message in it, to open a small menu headed with the bar's name ("Welcome messages", "Site announcements" or "Site tools"). Under **This bar**:

Button	What it does
Open	Goes to the message you right-clicked, or the bar's first link
Copy link	Copies that link's address
Hide bar	Hides this bar everywhere
Settings	Opens the Settings panel (on the Comfort section)

Esc, a click elsewhere, a scroll or resizing the window closes the menu.

WEBSITE › SITE FEATURES › INFO BARS AND NOTICES

Notices and status messages

The hero notice, demo chips, first-visit welcome, loading screen, and the short status messages the site shows.

Hero notice

A highlighted notice banner in the homepage's opening section. Select its ✕ (**Dismiss (re-enable in Settings → Comfort)**) to hide it. Switch it back on with **Hero notice** in Settings › **Highlights**.

Demo chips

Small labels with an information mark that sit above sections showing a live demo, marking them as "live" or "demo" content. Select the ✕ on any chip (**Hide demo chips (re-enable in Settings → Highlights)**) to hide

every demo chip on the site. Switch them back on with **Live demo chips** in Settings > Highlights.

First-visit welcome

The first time you open the site in a browser, a short animated welcome plays over the page for about a second (shorter if your device asks for reduced motion). Click it, or press **Esc**, **Enter** or **Space**, to skip it. It plays only once per browser. The cookie consent bar appears after it.

Loading screen

While a page is loading, a brief screen with the Auric Artisan logo and the line "Preparing local color tools." may show, with a progress bar. It disappears when the page is ready.

Connection messages

A small message appears at the edge of the screen when your connection changes:

Message	Meaning
Offline mode	Your device has lost its connection. The message stays while you are offline. Saved pages and tools keep working.
Back online	The connection has returned.

App messages

When the site is installed as an app or prepared for offline use, you may see:

Message	Meaning
Update ready — "Refresh to use the newest offline cache." (Refresh / Later)	A new version of the site is ready
Saving for offline — N%	An offline download you asked for is in progress
Full offline app ready	The offline download has finished
Auric Artisan installed	The app was installed
N files ready / Could not open file	Files opened with the installed app

These are explained in [Download and offline](#). Website updates can also be announced by the Update Kit; see [Kits](#).

Confirmation messages

Many actions show a short confirmation that fades after a couple of seconds, for example "Settings exported", "Page URL copied" or "Theme: Dark". They are announced to screen readers without moving focus. Each feature's reference page lists its messages.

Notifications

The site does not send system or push notifications. Everything above appears on the page itself.

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Info bars and notices reference

Every bar, notice, switch, default, timing and message.

Items and switches

Item	Settings > Highlights switch	Default	Hide from the page
Welcome bar	Welcome bar	Homepage only	✕ or right-click > Hide bar

Back online	About 2 seconds
Saving for offline — N%	While downloading
Full offline app ready	About 2 seconds
Auric Artisan installed	About 2 seconds
Update ready (Refresh / Later)	Until you choose

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Troubleshooting info bars and notices

Fixes for common problems with the info bars, clock strip and notices.

A bar I hid is back

Why: someone switched it on in Settings > Highlights, or you restored the section's defaults, which brings the bars back on the homepage.

What to do: select its × again.

A bar now shows on every page, not just the homepage

Why: switching a bar on in Settings shows it everywhere.

What to do: select **Restore section defaults** in Settings > Highlights to go back to homepage only.

The × tooltip says Comfort, but I cannot find the switch there

Why: the switches are in the **Highlights** section of Settings, not Comfort.

The clock shows the wrong time zone

Why: a fixed zone was chosen in the clock menu or in Settings > Clock, or your device reports a zone the site could not match exactly (the label then shows "(default)").

What to do: right-click the strip and choose **Auto-detect**, or pick your zone from the list.

The clock strip is missing

Why: it is off by default, and it is hidden in reading mode.

What to do: switch on **Clock strip** in Settings > Highlights.

"Offline mode" will not go away

Why: your device reports that it has no connection. The message stays until the connection returns.

What to do: check your connection. Saved pages keep working meanwhile.

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Info bars and notices FAQ

Short answers about the info bars, clock strip and notices.

Why are the bars only on the homepage?

They are an introduction. On other pages they would push the content down, so by default they stay on the homepage. You can show them everywhere from Settings › Highlights.

Can I see the first-visit welcome again?

It plays once per browser. It plays again only if you clear the site's data in your browser.

Does the site send notifications?

No. All messages appear on the page itself.

Can I show a world clock for another city?

Yes. Right-click the clock strip and choose that city's time zone. The strip shows one zone at a time.

Does the clock strip use my Settings clock choices?

Yes. The strip and Settings › Clock share 24-hour time, seconds, date format and time zone.

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Info bars and notices: supporting material

Contents of the info bars and notices supporting files.

File	What it covers
glossary.md	Terms used in these guides
related.md	Related features
privacy.md	What is stored

There are no keyboard shortcuts for the bars. The clock strip's menu opens with a right-click; the Settings panel opens with **Ctrl** + **,**.

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Info bars and notices glossary

Terms used in the info bars and notices guides.

Term	Meaning
Info bar	A slim strip under the header: welcome, announcement or quick links.
Clock strip	A live clock under the header with the date and time zone.
Hero notice	A highlighted banner in the homepage's opening section.
Demo chip	A small label marking a live or demo section.
Time zone	A region's standard time, such as Asia/Kolkata or Europe/London.
UTC offset	How far a time zone is ahead of or behind Coordinated Universal Time.
ISO date	A date written year-month-day, for example 2026-09-24.
Status message	A short message at the edge of the screen about the connection or the app.

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Info bars and notices privacy

What the info bars, clock strip and notices store.

- Which bars and notices you show or hide, and your clock choices, are kept in this browser as part of your settings.
- The first-visit welcome remembers that it has played, in this browser.
- The clock uses your device's time and time zone. Nothing about them is sent to Auric Artisan.
- Nothing is recorded when you open, copy or hide a bar.

WEBSITE > SITE FEATURES > INFO BARS AND NOTICES

Related to info bars and notices

Features related to the info bars and notices.

- [Settings panel > Highlights and clock](#) — every switch and clock setting.
- [Cookie consent and privacy](#) — the consent bar shown after the first-visit welcome.
- [Download and offline](#) — the app and offline messages.
- [Kits](#) — the Update Kit's update notices.
- [Accessibility aids](#) — reading mode, which hides the bars.

WEBSITE > SITE FEATURES > KEYBOARD SHORTCUTS

Keyboard shortcuts

The master list of keyboard shortcuts for the whole Auric Artisan website.

Almost everything on auricartisan.com can be reached from the keyboard. This section gathers every site-wide shortcut in one place: search, settings, the guide, reading mode, theme, text size, split view, the recorder, the kits and the right-click menu, followed by the keys that work inside each panel.

On a Mac, use **Cmd** where this list says **Ctrl** for the shortcuts marked "Ctrl or Cmd". Shortcuts that use **Alt** use the **Option** key on a Mac.

Letter shortcuts are ignored while you are typing in a text field, so they never interfere with what you type.

Who it is for

Keyboard users, power users, and anyone who wants to move faster around the site.

Where to find it

- The full list: [docs/reference.md](#).
- Inside the site: **Settings** (**Ctrl** + **,**) > **Shortcuts** lists the Settings panel's own shortcuts, and right-click > **Site** > **Keyboard shortcuts** opens it.

Quick start

1. Press **Ctrl** + **K** and search for anything.
2. Press **Ctrl** + **,** to open Settings.
3. Press **?** for the page guide.
4. Press **Alt** + **R** for reading mode, and again to leave it.
5. Press **Ctrl** + **Shift** + **D** for split view, and **Esc** to close it.

The ten most useful

Keys	Action
Ctrl + K	Search the site (Spotlight)
Ctrl + ,	Settings
?	Page guide and tour
Alt + R	Reading mode
Alt + T	Switch theme

Keys	Action
Alt + + / Alt + - / Alt + 0	Text size
Ctrl + Shift + D	Split view
Alt + Shift + R	Screen recorder
Shift + right-click	Your browser's own right-click menu
Esc	Close the open panel or menu

In this folder

troubleshooting.md	Why a shortcut might not work, and what to do

WEBSITE > SITE FEATURES > KEYBOARD SHORTCUTS

Keyboard shortcut reference

Every keyboard shortcut on the Auric Artisan website, grouped by where it works.

"Ctrl or Cmd" means **Ctrl** on Windows, Linux and ChromeOS, and **Cmd** on a Mac. On a Mac, **Alt** is the **Option** key.

Anywhere on the site

Keys	Action	Notes
Ctrl + K (Ctrl or Cmd)	Open or close Spotlight search	Search and Spotlight
Ctrl + , (Ctrl or Cmd)	Open or close Settings	Settings panel
?	Open the page guide	Guide and page outline
Alt + R	Reading mode on or off	Not while typing
Alt + T	Theme: Light, Dark, System	Not while typing
Alt + + (or Alt + =)	Text one size larger	Not while typing
Alt + -	Text one size smaller	Not while typing
Alt + 0	Default text size	Not while typing
Alt + M	Reduced motion on or off	Not while typing
Ctrl + Shift + D	Open or close split view	Split view
Alt + click a site link	Open split view with that page	—
Alt + Shift + R	Open the recorder; while recording, stop and save	Screen recorder
Alt + Shift + P	Pause or resume a recording	—
Ctrl + Shift + U	Check for and apply a website update	Kits (Update Kit)

Keys	Action	Notes
Ctrl + Shift + C	Open the colour tools menu (with a selected hex code, if any)	Uses Shift , so it is not the browser's copy
Shift + right-click	Your browser's right-click menu (or the site's, if you swapped them)	Context menu
Esc	Close the open panel, menu, dialog or bar	—

Kits

Keys	Action
Ctrl + Shift + K (Ctrl or Cmd)	Open or close the Feature Kit
Ctrl + 1 to Ctrl + 6 inside the Feature Kit	Calculator, Converter, Feedback, Notes, Date and time, Developer tools
Ctrl + M (Ctrl or Cmd)	Open the Menu Kit
Ctrl + Shift + A (Ctrl or Cmd)	Open or close the Advanced Kit
Ctrl + Shift + L (Ctrl or Cmd)	Open or close the Library Kit
Ctrl + K inside an open Menu Kit or Status Kit	Jump to the kit's own search field
/ inside an open Menu Kit or Status Kit	Jump to the kit's own search field
Esc	Close the open kit
Esc	Close the page utilities bar

Details are in [Kits](#).

Header menus and drawer

Keys	Action
Enter / Space on Company, Tools or Learn	Open or close the menu
Down / Up on a menu button	Open at the first or last entry
Down / Up / Home / End in a menu	Move between entries
Esc	Close the menu, then the drawer
First Tab on a page	Show Skip to main content

Spotlight

Keys	Action
Up / Down	Move through results
Enter	Open or run
Ctrl + Enter (Ctrl or Cmd)	Open in a new tab
Tab / Shift + Tab	Next or previous scope
> first	Command mode
Esc	Clear, then close

Settings panel

Keys	Action
Left / Right on the section list	Previous or next section
Esc	Close a drop-down, then the confirmation, then the panel

Right-click menu

Keys	Action
Type	Filter actions
Up / Down	Move
Right	Open a submenu, or reach a row's pin star
Left	Leave the pin star, or close a submenu
Enter / Space	Run
Esc	Close submenu, clear filter, close menu

Guide and tours

Keys	Action
Up / Down / Home / End	Move through the guide
Enter	Open the focused item or top match
Left / Right on a tab	Change tab
Right / Left in a tour	Next or previous stop

Keys	Action
Esc	Close the guide or leave the tour

Split view

Keys	Action
Alt + 1 / Alt + 2	Focus the live or companion pane
Alt + V	Side by side or stacked
Alt + S	Swap panes
Alt + E	Equal split
Enter / Ctrl + Enter in an address bar	Load, or open in a new tab
Esc	Close a menu, restore an address, or close split view

Screen recorder

Keys	Action
Arrow keys on the dialog grip	Move the dialog (Shift for finer steps)
Esc	Close the dialog, list, player or region picker

Other places

Where	Keys	Action
Any tooltip	Alt	Expand its details (when Advanced tooltips is off)
Feedback panel	1 to 5	Set the star rating
First-visit welcome	Esc , Enter , Space	Skip it
Site date picker	Arrows, Page Up / Page Down , Shift + those, Home / End , Enter / Space , Esc	Day and week, month, year, week edges, choose, close
Navigation dock	Tab into it	Opens the collapsed dock

WEBSITE > SITE FEATURES > KEYBOARD SHORTCUTS

Troubleshooting keyboard shortcuts

Why a site shortcut might not work, and what to do.

A shortcut does nothing

Possible causes and fixes:

- **You are typing in a field.** **Alt** letter shortcuts and **?** are ignored in text fields. Click an empty part of the page, or press **Esc** to leave the field, then try again.
- **The page is still loading.** Most panels load a moment after the page. Wait, then try again.
- **The feature is not on this page.** A few simple pages (for example sign-in pages) do not load every panel.
- **Another panel has focus.** Some panels use keys for themselves while open; close the panel first.

The browser did something else instead

Why: browsers and operating systems reserve some combinations. For example, **Ctrl** + **Shift** + **D** can bookmark all tabs, **Ctrl** + **Shift** + **A** can search tabs, and **Cmd** + **M** minimises a window on a Mac. The site claims its shortcuts where the browser allows it, but some browsers keep certain combinations for themselves.

What to do: use the on-screen control instead (the navigation dock for split view, the page utilities bar for kits and Settings).

? does not open the guide

Why: on some keyboard layouts, **?** needs a modifier the site does not accept, such as **Alt Gr**.

What to do: use the **Guide** button in the header.

Alt shortcuts open the browser's menu bar

Why: in some browsers on Windows, pressing and releasing **Alt** alone moves focus to the menu bar.

What to do: hold **Alt** while pressing the second key; the site's shortcut takes effect.

Alt + **+** does not enlarge text

Why: on many keyboards **+** needs **Shift**.

What to do: press **Alt** + **=** instead, which does the same.

WEBSITE > SITE FEATURES > LANGUAGE

Language

Switch Auric Artisan between English and Hindi, and learn what is and is not translated.

Auric Artisan is available in **English** and **Hindi** (हिन्दी). English is the default. When you switch to Hindi, the page you are on is translated in place, without a reload, and every page you open afterwards appears in Hindi too, until you switch back.

The translation covers the site's interface and its pages: menus, buttons, labels, tooltips, messages, settings, kits and the text of articles and tool pages. The site's own brand and product names are written in Devanagari (for example ऑरिक आर्टिज़न for Auric Artisan), while names of other companies and products, code, hex values and keyboard keys stay as they are. Hindi text uses Devanagari fonts chosen for each platform, with slightly taller line spacing for comfortable reading.

Switching back to English reloads the page in English.

Who it is for

Hindi readers, and anyone who prefers to use the site in Hindi. The language choice also sets how dates and times are written (Indian Hindi conventions).

Where to find it

- The globe button in the header (tooltip **Language / भाषा**). It switches between the two languages.
- **Settings > Appearance > Language: English** or **हिन्दी**.
- The mobile drawer > **Preferences > Language**.
- Spotlight: press **Ctrl + K**, type **>**, and choose **Switch language**.
- A link ending in **?lang=hi** (or **?lang=en**).

Quick start

1. Select the globe button in the header.
2. The page switches to Hindi. Menus, buttons and the page text now read in Devanagari.
3. Open any other page: it is in Hindi too.
4. Select the globe again. The page reloads in English.

What you can do

- Use the whole site in Hindi, including the header, footer, kits, Settings, Spotlight, the right-click menu and page content.
- Share a link that opens in Hindi by adding **?lang=hi**.

- Keep Hindi available offline in the installed app.
-

faq.md	Short answers

WEBSITE > SITE FEATURES > LANGUAGE

Get started with languages

Switch the site between English and Hindi, and share a link that opens in Hindi.

Switch to Hindi

Use any one of these:

- **Header:** select the globe button. Its tooltip reads **Language / भाषा** with the description in both languages.
- **Settings:** press **Ctrl** + **,**, and under **Appearance > Language** (भाषा — interface and articles) select **हिन्दी**.
- **Drawer (narrow screens):** open the menu, and under **Preferences > Language** tap **हिन्दी**.
- **Spotlight:** press **Ctrl** + **K**, type **>**, and choose **Switch language** (English ⇌ हिन्दी).

What happens:

1. The site downloads the Hindi text for the page you are on. On a first switch this can take a moment on a slow connection.
2. The page is translated where it stands. You stay at the same place on the page and nothing you typed is lost.
3. Text that appears later, such as a kit you open or a tool's results, is translated as it appears.
4. Every page you open afterwards loads in Hindi.

Switch back to English

Use the same controls: the globe, **English** in Settings or the drawer, or **Switch language** in Spotlight.

The page **reloads** in English. Translation changes the page's text in place, so a reload is how the site returns to the original English. If you were typing into a form, finish or copy your text first.

Share a link that opens in Hindi

Add `?lang=hi` to the end of any page address, for example:

```
https://auricartisan.com/tool/vision-simulation/?lang=hi
```

Anyone who opens the link sees the page in Hindi, and their browser remembers Hindi for later visits. `?lang=en` does the same for English.

If the address already has a `?`, add `&lang=hi` instead.

Language buttons are always readable

The language buttons show each language in its own script, **English** and **हिन्दी**, and are never translated. You can find your language even if you cannot read the one on screen.

WEBSITE > SITE FEATURES > LANGUAGE

What is translated

What changes when the site is in Hindi, and what deliberately stays in English or Latin script.

Translated into Hindi

- **Site chrome:** the header, drawer, footer, info bars, cookie notice, navigation dock and page utilities bar.
- **Panels:** the Settings panel, the kits, Spotlight, the guide and tours, the right-click menu and the eye-rest reminder.
- **Page content:** the text of company and legal pages, tool pages, Learn articles, documentation, blog posts and library pages.
- **Hidden text:** tooltips, placeholders in empty fields, image descriptions and the labels read out by screen readers.
- **Messages** built from live values, such as labels that include a colour code or a count, for the common kinds of message.
- **The logo:** the Auric Artisan wordmark is shown in Devanagari.
- **Promotional images** with text in them are swapped for Hindi versions where one exists.
- **Dates and times** are written the Hindi (India) way, for example on the clock strip.

Pages that open without the rest of the site around them, such as sign-in, checkout, the offline page and the "page not found" page, are translated too.

Written in Devanagari rather than translated

The site's own brand and product names are transliterated, not translated: Auric Artisan becomes ऑरिक् आर्टिज़न, and names such as Auric Icons and the kit names (फ़्रीचर किट, मेन्यू किट and so on) are written the same way.

Kept as they are

- **Code, keyboard keys and values:** anything shown as code, key caps such as `Ctrl`, hex codes, numbers with units, and file names.
- **Names of other companies and products** that people type or search for: Google, GitHub, VS Code, Open VSX, Figma, Razorpay, Cloudflare and similar.
- **Technical and scientific names** that are used internationally, such as CIELAB, xyY, YCbCr, Von Kries, Bradford, and font names such as Inter.
- **The language buttons** themselves, which always show English and हिन्दी.
- **Web addresses:** a page has the same address in both languages.
- **Your own content:** names you give to saved items, text you type into tools, and portfolio text.
- **Social preview images** (the picture shown when a link is shared) stay in English.

Not covered by this switch

- **The browser extension** is a separate product with its own language support. See [Browser extension](#).
- **Search results** are matched against the English text of pages, so searching with English words works best.
- A small number of messages assembled from several live values may still appear partly in English.

WEBSITE > SITE FEATURES > LANGUAGE

Language reference

Every language control, what it does, and how the language choice is kept.

Controls

Control	Where	What it does
Globe button (Language / भाषा)	Header, wide screens	Switches English ⇌ Hindi
English / हिन्दी	Settings > Appearance > Language	Picks a language
English / हिन्दी	Drawer > Preferences > Language	Picks a language
Switch language	Spotlight, command mode (⌘)	Switches English ⇌ Hindi; shows the current language
?lang=hi / ?lang=en	Any page address	Opens the page in that language and remembers it

Behaviour

Item	Behaviour
Languages	English (en), Hindi (hi)
Default	English
Switching to Hindi	Translates the page in place, then every page after
Switching to English	Reloads the page
Remembered	In this browser, for every page, until you switch
Page language	Marked as Hindi while in Hindi, so screen readers and translation tools know
Date and time format	Hindi (India) while in Hindi; English (United States) style in English, except where your Clock settings choose a format
Fonts	Devanagari system fonts such as Nirmala UI, Noto Sans Devanagari, Mukta, Hind or Kohinoor Devanagari, depending on your device
In the settings export file	No
Offline	Hindi text is included in the offline download when you prepare it while the site is in Hindi

Opting parts of a page out

Some elements are deliberately never translated: the language buttons, code, keyboard keys, and the header detail lines of the right-click menu that show addresses, hex codes and quoted text.

WEBSITE > SITE FEATURES > LANGUAGE

Troubleshooting languages

Fixes for common problems when using the site in Hindi.

The page stays in English after I choose Hindi

Why: the Hindi text is downloaded when you switch. On a slow or broken connection it may not arrive.

What to do: check your connection and reload the page; the site remembers Hindi and translates again on load. In the installed app offline, Hindi is available only if you prepared the offline version while the site was in Hindi.

Some words are still in English

Why: some names and terms are kept in English on purpose (see [What is translated](#)), and a few messages made up of several live values are not yet translated.

Switching to English reloaded the page and I lost what I typed

Why: returning to English needs a reload.

What to do: before switching back, finish or copy your text. Many tool pages keep their inputs in the page address, so a reload restores them (see [Shareable links](#)).

Devanagari text looks like boxes or a plain font

Why: your device has no Devanagari font, or not one of those the site asks for.

What to do: install a Devanagari font such as Noto Sans Devanagari, or add the Hindi language pack in your operating system's language settings.

The site opened in Hindi although I never chose it

Why: you followed a link that ended in `?lang=hi`, which switches the site to Hindi and remembers it.

What to do: select the globe button, or choose **English** in Settings.

Search does not find anything when I type in Hindi

Why: page search matches the English text of pages.

What to do: search with English words. Spotlight commands can be found in either language.

[WEBSITE](#) > [SITE FEATURES](#) > [LANGUAGE](#)

Language FAQ

Short answers about English and Hindi on Auric Artisan.

Which languages are available?

English and Hindi.

Is the Hindi version a separate website?

No. Every page has one address, and the same page is shown in the language you chose.

Does switching language change my other settings?

No. Theme, accent, text size and your other settings stay as they are.

Does my account remember the language?

The language is kept in your browser, not in your account. Choose it once on each browser you use, or open a link with `?lang=hi`.

Why are some brand names written in Devanagari?

The site writes its own brand and product names in Devanagari so that Hindi pages read in one script. Names of other companies and tools that you would type into a search engine stay in Latin letters.

Can I read an article in Hindi and a tool in English?

Not at the same time. The language applies to the whole site in this browser.

WEBSITE > SITE FEATURES > LANGUAGE

Language glossary

Terms used in the language guides.

Term	Meaning
Devanagari	The script used to write Hindi (हिन्दी).
Transliteration	Writing a name in another script by its sound, not its meaning, such as ऑरिक आर्टिज़न for Auric Artisan.
Translation in place	Replacing the text of a page that is already open, without loading it again.
Locale	The language and region conventions used to write dates, times and numbers, such as Hindi (India).
Query parameter	A part of a web address after <code>?</code> , such as <code>?lang=hi</code> , that passes a setting to the page.

WEBSITE > SITE FEATURES > LANGUAGE

Language limits and accuracy

How complete the Hindi translation is and what to expect from it.

- **Coverage.** The site's interface and page text are translated across the site. A small number of strings stay in English: terms that are international (such as CIELAB or OKLCH-style colour notations), third-party names, code, and some messages built from several live values.
- **Emphasis.** Where an English heading has part of it styled differently (for example in italics), the Hindi heading may show it as plain text.
- **Layout.** Hindi text can be longer or shorter than English. Lines use slightly taller spacing to keep Devanagari marks clear.
- **Search.** Page search matches English text.

- **Technical terms.** Names used internationally, such as CIELAB, xyY or Bradford, are kept in Latin letters so they match the literature and other tools.

WEBSITE > SITE FEATURES > LANGUAGE

Language privacy

What is stored about your language choice and what switching downloads.

- Your language choice is kept in this browser's local storage for auricartisan.com. The cookie policy lists it under **Functional** storage as the language and locale preference.
- Switching to Hindi downloads the Hindi text for the pages you open, from auricartisan.com. No text from the page, and nothing you type, is sent anywhere to be translated: translation happens in your browser from those downloaded files.
- Nothing about your language is sent to an account.

WEBSITE > SITE FEATURES > LANGUAGE

Related to languages

Features related to the site's language setting.

- [Settings panel](#) — the Language control in Appearance.
- [Header and navigation](#) — the globe button and the drawer's Language switch.
- [Search and Spotlight](#) — the **Switch language** command.
- [Download and offline](#) — keeping Hindi available offline.
- [Browser extension](#) — a separate product with its own language support.

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Navigation dock

The floating navigation rail with Back, Forward, Reload, page outline, split view, recorder, copy, share and scroll controls.

The navigation dock is a slim floating rail on the edge of every page. It gathers the controls you reach for while reading or working: **Back**, **Forward** and **Reload**; a **Page outline** that lists the page's headings and jumps to them; **Open split view**; **Record screen**; **Copy link** and **Share**; and **Scroll to top** (with a ring that fills as you read) and **Scroll to bottom**.

The dock is independent of the header, so it stays with you as you scroll. When you are not using it, it tucks away to a thin gold line at the edge of the window and slides out when you point at it. You can drag it up or down, and move it to the other side of the screen; it remembers where you put it.

On phones it becomes a horizontal bar at the bottom of the screen, opened from the page utilities bar.

Who it is for

- Readers of long pages who want to jump between sections or back to the top.
- Anyone using the site as an installed app, where the browser's own Back and Reload buttons may be hidden.
- People who share pages often.

Where to find it

- **Desktop and tablets:** a thin gold line halfway down the left edge of the window (or the right edge, if you moved it). Point at it to open the dock.
- **Phones:** open the page utilities bar at the bottom-left and select **Navigate**.

Quick start

1. Move your pointer to the thin line at the left edge of the window. The dock slides out.
2. Select **Page outline** (the list icon). A panel titled **On this page** lists the page's headings.
3. Select a heading. The page scrolls to it and the panel closes.
4. Select **Scroll to top**. The ring around it shows how far down the page you were.
5. Drag the dotted grip at the top of the dock to the right-hand half of the screen. The dock moves to the right edge and stays there on every page.
6. Move your pointer away. After a moment the dock tucks back into a thin line.

What you can do

- Go back, go forward and reload, even when the browser's own buttons are hidden.
- Jump to any heading on the page and see which section you are in.
- Open split view or the screen recorder.
- Copy the page link, including what you have changed on the page, or share it.
- Scroll to the top or bottom, and see your reading progress.
- Move the dock and keep it where you like.

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Get started with the navigation dock

Open the navigation dock and learn what each of its buttons does.

Open the dock

When a page loads on a computer, the dock shows fully for a moment and then tucks itself away into a thin gold line at the edge of the window. To bring it back:

- point at the line; or
- click it; or
- move keyboard focus into it with **Tab**.

It tucks away again about half a second after your pointer leaves, unless the page outline is open or a button in the dock has keyboard focus.

On a phone, open the page utilities bar at the bottom-left and select **Navigate**.

The buttons

From top to bottom (left to right on a phone):

Button	What it does
Grip (six dots)	Drag to move the dock. Tooltip: "Drag to move". Not shown on phones.
Back	Goes back one page. Greyed out when there is nothing to go back to.
Forward	Goes forward one page. Greyed out when there is nothing ahead.

Button	What it does
Reload	Reloads the page.
Page outline	Opens the On this page list of headings.
Open split view	Opens split view with this page (see Split view).
Record screen (Alt+Shift+R)	Opens the screen recorder (see Screen recorder).
Copy link	Copies the page's address. The icon briefly becomes a tick.
Share	Opens your device's share sheet; without one, copies the link and shows a tick.
Scroll to top	Scrolls smoothly to the top. The ring around it shows how far down you are.
Scroll to bottom	Scrolls smoothly to the end of the page.
Flip dock side	Moves the dock to the other edge. Not shown on phones.

Hover or focus a button to see its name in a tooltip.

Note: **Copy link** and **Share** copy the address exactly as it is in the address bar, which can include the page's remembered state, such as your scroll position and the values you typed into a tool. See [Shareable links](#).

Try it

1. Open a long page, such as <https://auricartisan.com/company/about/>.
2. Scroll halfway down. Point at the dock: the ring around **Scroll to top** is half full.
3. Select **Page outline**. The heading of the section you are reading is highlighted.
4. Select the first heading. The page scrolls up to it.
5. Select **Copy link** and paste the address somewhere. Opening it later returns you to the same place on the page.

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Move and collapse the dock

Drag the navigation dock, flip it to the other side, and understand how it collapses on desktop and on phones.

Move the dock up or down

1. Point at the dock so it opens.
2. Press and hold the grip (six dots) at its top.
3. Drag up or down. The dock can sit anywhere between 10% and 90% of the window's height.

4. Let go.

Result: the dock stays at that height on every page, in this browser.

Move the dock to the other side

Either:

- drag the grip across the middle of the window, then let go; or
- select **Flip dock side** (the arrow at the bottom of the dock).

Result: the dock moves to the other edge and stays there on every page. The outline panel opens on the side facing the page.

How the dock collapses

On screens wider than 700 pixels:

- after a page loads, the dock stays open for about 1.6 seconds so you can see it, then collapses;
 - collapsed, it is a thin gold line, 64 pixels tall, flush with the edge. It is faint until you point at it;
 - it opens when you point at it, click it or tab into it, and collapses about half a second after you move away;
 - it stays open while the page outline is open, while you are dragging it, and while a button in it has keyboard focus.
-

On a phone

On screens 700 pixels wide or narrower:

- the dock is a horizontal bar centred at the bottom of the screen. If its buttons do not fit, swipe it sideways;
 - the grip and **Flip dock side** are not shown, and the dock cannot be dragged;
 - it starts collapsed. Open it from the page utilities bar with **Navigate** (on the narrowest phones this is the only way). On slightly wider screens, a round button with a list icon (**Show navigation**) also opens it;
 - it closes again when you tap anywhere outside it, and a dock opened with its round button closes by itself after about five seconds.
-

When the dock is hidden

- While the screen saver or an eye rest is showing.
- While the mobile drawer is open.
- Inside the panes of split view, which have their own toolbar.
- On the sign-in and verification pages.

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Jump around with the page outline

Use the dock's page outline to see the page's sections, find where you are, and jump to any heading.

The **Page outline** button opens a panel titled **On this page** beside the dock. It lists the headings of the page you are on and highlights the one you are reading.

Open the outline and jump to a section

1. Point at the dock and select **Page outline** (the list icon).
2. The **On this page** panel opens. Main headings are listed normally; sub-headings are indented and slightly smaller.
3. The heading of the section you are reading is highlighted in the accent colour. As you scroll, the highlight moves with you.
4. Select a heading.

Result: the page scrolls smoothly to that heading, leaving room for the site header above it, and the panel closes.

Close the outline

Select **Page outline** again, press **Esc**, or click anywhere outside the panel and the dock.

What the outline lists

- The main headings and their sub-headings (heading levels 1, 2 and 3) in the page's main content.
- Headings in the header, footer and navigation areas are left out, as are hidden headings and headings longer than 90 characters.
- The list is rebuilt every time you open it, so headings that appear later (for example in a tool's results) are included.
- On a page without headings, the panel reads "No sections on this page".

Other outlines on the site

Long company, pricing, legal and security pages also have a section rail pinned under the header. It is described in [Guide and page outline](#). The page guide (?) lists the page's tour stops. See [Guide and page outline](#).

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Navigation dock reference

Every control of the navigation dock with its label, action and availability.

Controls

Control	Label (tooltip)	Action	Phone
Grip	Drag to move	Drag vertically; drag across the middle to change side	Hidden
Back	Back	Browser history back	Shown
Forward	Forward	Browser history forward	Shown
Reload	Reload	Reloads the page	Shown
Outline	Page outline	Opens or closes On this page	Shown
Split view	Open split view	Opens split view	Shown
Record	Record screen (Alt+Shift+R)	Opens the recorder setup	Shown
Copy	Copy link	Copies the current address; shows a tick	Shown
Share	Share	Share sheet, or copies the address and shows a tick	Shown
Top	Scroll to top	Smooth scroll to the top; ring shows progress	Shown
Bottom	Scroll to bottom	Smooth scroll to the end	Shown
Flip	Flip dock side	Moves the dock to the other edge	Hidden
Collapsed line or button	Show navigation (Navigation)	Opens the dock	Button on some phones

Back and **Forward** are greyed out when there is no page in that direction, in browsers that report this (such as Chrome and Edge). In other browsers they are always available.

States and sizes

State	Appearance
Open (desktop)	Vertical pill of buttons, 12 pixels from the edge
Collapsed (desktop)	Thin gold line, 3 by 64 pixels, 4 pixels from the edge
Open (700 px and narrower)	Horizontal bar centred at the bottom, scrolls sideways
Collapsed (700 px and narrower)	44-pixel round button, or hidden on the narrowest screens

Remembered settings

Setting	Values	Default
Side	Left, right	Left
Height	10% to 90% of the window	50% (middle)

Both are kept in this browser and apply on every page.

Timings

Behaviour	Time
Stays open after a page loads (desktop)	About 1.6 seconds
Collapses after the pointer leaves	About 0.5 seconds
Closes after opening from its round button (phone)	About 5 seconds
Copied tick shows for	About 1 second

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Troubleshooting the navigation dock

Fixes for common problems with the navigation dock.

I cannot find the dock

Why: it collapses to a thin, faint line at the edge of the window a moment after the page loads. On phones it has no visible button on the narrowest screens.

What to do: look halfway down the left edge (or the right edge, if you moved it) and point at the line. On a phone, open the page utilities bar and select **Navigate**.

The dock closes before I can use it

Why: it collapses half a second after the pointer leaves it.

What to do: keep the pointer over the dock, or tab into it with the keyboard; it stays open while a button in it has focus. The outline keeps it open too.

Back and Forward are greyed out

Why: there is no page in that direction in this tab's history. If you opened the page in a new tab, there is nothing to go back to.

Share only copied the link

Why: your browser or device has no share sheet available to web pages, so the dock copies the link instead and shows a tick.

What to do: paste the link into the app you want to share it with.

The copied link is very long

Why: the address includes the page's remembered state after `#p=`, such as your scroll position and values you entered. See [Shareable links](#).

What to do: to share a clean link, scroll to the top of the page and clear any values you typed before copying, or delete the part from `#p=` onwards after pasting.

The outline says "No sections on this page"

Why: the page's main content has no headings the outline can list.

What to do: use **Scroll to top** and **Scroll to bottom**, or the page guide (`?`).

The dock covers part of the page

What to do: drag it up or down with the grip, or move it to the other side with **Flip dock side**. On a phone, tap outside it to close it.

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Navigation dock FAQ

Short answers about the navigation dock.

Can I turn the dock off?

There is no switch to remove it. It collapses to a thin line when you are not using it, and you can move it wherever it is least in the way.

Can I keep the dock open all the time?

No. On desktop it opens when you point at it or tab into it, and collapses when you move away.

Does the dock work in the installed app?

Yes. It is especially useful there, where the browser's own Back, Forward and Reload buttons may not be visible.

Is the dock the same as the header menus?

No. The header takes you to other pages; the dock moves you around the page you are on and through your history.

Why is there no dock inside split view?

Each pane of split view has its own Back, Forward and Reload buttons, so the dock stays out of the panes.

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Navigation dock: supporting material

Contents of the navigation dock's supporting files.

File	What it covers
glossary.md	Terms used in the dock guides
related.md	Features the dock opens and similar features
privacy.md	What the dock remembers and shares

The dock has no keyboard shortcuts of its own. The shortcuts for the features it opens (split view, the recorder) are in [Keyboard shortcuts](#).

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Navigation dock glossary

Terms used in the navigation dock guides.

Term	Meaning
Dock	The floating rail of navigation buttons on the edge of the window.
Collapsed	The dock's resting state: a thin line at the edge (desktop) or a small round button (phone).
Grip	The six-dot handle at the top of the dock, used to drag it.
Page outline	The On this page panel listing the page's headings.
Progress ring	The ring around Scroll to top that fills as you scroll down the page.
Share sheet	Your device's own panel for sending a link to another app or person.
Page state	Details the site keeps in the address after <code>#p=</code> , such as your scroll position.

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Navigation dock privacy

What the navigation dock stores and what its buttons share.

- The dock remembers only which side of the window it is on and how high it sits, in this browser.
- **Copy link** puts the page address on your clipboard. **Share** hands it to your device's share sheet. Neither sends anything to Auric Artisan.
- The address can include the page's remembered state after `#p=`, such as values you typed into a tool. Check the link before you share it if that matters. See [Shareable links](#).

WEBSITE > SITE FEATURES > NAVIGATION DOCK

Related to the navigation dock

Features related to the navigation dock.

- **Split view** — opened by **Open split view**.
- **Screen recorder** — opened by **Record screen**.
- **Shareable links** — what **Copy link** and **Share** include.
- **Guide and page outline** — the page guide and the section rail on long pages.
- **Header and navigation** — the page utilities bar, whose **Navigate** button opens the dock.
- **Context menu** — also offers Back, Forward, Reload, scroll and copy-link actions.

WEBSITE > SITE FEATURES > SCREEN RECORDER

Screen recorder

Record your screen, a window, this tab, a region of the page or a tool's canvas, and export video, animated GIF or PNG images.

Every page on auricartisan.com has a built-in recorder. Press **Alt** + **Shift** + **R**, choose what to record, and start. You can capture:

- **Screen or window** — any screen, window or tab you pick in your browser's sharing dialog;
- **This tab** — the page you are on;
- **Region of this page** — a rectangle you draw, or a part of the page you click;
- **Tool canvas** — a tool's drawing surface, captured pixel for pixel.

While you record, a small bar shows the time and file size, with pause, stop and discard buttons. When you stop, the recording is kept on your device under **My recordings**, where you can play it, rename it, trim it, and export it as a video file, an animated GIF, a ZIP of PNG frames or a single PNG still.

Recordings are made and stored entirely in your browser. Nothing is uploaded.

Who it is for

- Designers and developers showing a tool, a palette or a bug to someone else.
- Teachers and writers making short clips or GIFs of colour tools.
- Anyone filing a bug report who wants to show what happened.

Where to find it

- Press **Alt** + **Shift** + **R** on any page.
- Select **Record screen** in the navigation dock.

The recorder works in desktop browsers that let web pages capture the screen, such as Chrome, Edge and Firefox. Mobile browsers generally cannot capture the screen; the **Tool canvas** source can still work where a page has a canvas.

Quick start

1. Press **Alt** + **Shift** + **R**. The **Your Recorder** dialog opens.
2. Under **Recording source**, choose **This tab**.
3. Leave the capture settings as they are and select **Start recording**.
4. Your browser asks to share this tab. Allow it.
5. After a 3-second countdown, recording starts and the recording bar appears.
6. Do what you want to show, then select **Stop and save** on the bar (or press **Alt** + **Shift** + **R**).

7. **My recordings** opens with your new clip at the top. Select **GIF** to export it as an animated GIF.

What you can do

- Record a screen, window, tab, page region or tool canvas.
 - Choose frame rate, quality, maximum resolution and a countdown.
 - Add microphone narration and the page's own sound; highlight the pointer.
 - Pause, resume, stop or discard a recording.
 - Play, rename, trim, download and delete recordings.
 - Export an animated GIF, a ZIP of PNG frames or a PNG still.

WEBSITE > SITE FEATURES > SCREEN RECORDER

Get started with the screen recorder

Open the recorder, learn the setup dialog, and make your first recording.

Open the recorder

- Press **Alt** + **Shift** + **R** on any page.
- Or point at the navigation dock and select **Record screen (Alt+Shift+R)**.

The first time, the recorder takes a moment to load. The **Your Recorder** dialog opens. It floats over the page without blocking it.

A tour of the dialog

1. **Header.** A grip to move the dialog, the title **Your Recorder**, **Reset dialog position** and **Close**.
2. **Recording source** (choose what enters the frame): **Screen or window**, **This tab**, **Region of this page**, **Tool canvas**. Each has a one-line description. A source the page or browser cannot use is greyed out with the reason.
3. **Capture settings** (video output): **Frame rate**, **Quality**, **Resolution cap** and **Countdown**.
4. **Audio & pointer** (optional capture layers): **Microphone**, **Tab audio** and **Highlight the cursor**.
5. **A note** saying which video format this browser records: "Recording to MP4 — plays anywhere." or "Recording to WebM. Export to GIF or frames from My recordings."
6. **Footer.** **My recordings**, **Reset setup**, the **Alt Shift R** reminder, and **Start recording**.

Your choices are remembered for next time.

Your first recording

1. Open the recorder.
2. Choose **Screen or window**.
3. Select **Start recording**. Your browser's sharing dialog opens.
4. Pick the window or screen to record and confirm.
5. A large countdown (3, 2, 1) shows on the page. Recording then starts, and the recording bar appears with a timer and the file size so far.
6. Select **Stop and save** on the bar, press **Alt** + **Shift** + **R**, or use your browser's own **Stop sharing** button.

Result: a message such as "Recording saved — 00:42, 6.3 MB." appears, and **My recordings** opens with the new clip highlighted.

Move or reset the dialog

- Drag the header to move the dialog. With the grip focused, the arrow keys move it; hold **Shift** for finer steps.
- **Reset dialog position**, or a double-click on the grip, returns it to the centre ("Recorder returned to the center.").
- On narrow screens the dialog cannot be dragged.

Close the dialog

Select **Close** or press **Esc**. If a drop-down list in the dialog is open, the first **Esc** closes the list.

WEBSITE > SITE FEATURES > SCREEN RECORDER

My recordings and export

Play, rename, trim, export and delete your recordings.

My recordings lists every recording kept in this browser. It opens after each recording, or from **My recordings** in the recorder dialog.

The list

The panel header has a grip to move it, the title **My recordings, New recording** (opens the setup dialog) and **Close**. **Esc** closes it.

Each recording shows:

- a thumbnail; select it to play the recording;

- its title, which you can edit in place (an empty title becomes "Untitled recording");
- details: length, file size, pixel size, and "with audio" when it has sound;
- actions: **Download video**, **GIF**, **Frames**, **Still**, **Trim** and **Delete**.

The foot of the panel shows the total, for example "4 recordings · 38.2 MB used · 1.1 GB free".

With no recordings, the panel reads "No recordings yet." with a **Record something** button.

Play a recording

Select the thumbnail. A player opens with the recording's title and standard video controls. **Esc** or **Close** closes it.

Download the video

Select **Download video**. The file downloads as MP4 or WebM, whichever format this browser recorded.

Export an animated GIF

1. Select **GIF** (Export as an animated GIF).
2. A progress bar shows "Encoding GIF...".
3. The GIF downloads, and the message gives its size, for example "GIF exported — 2.4 MB."

GIFs are made at 10 frames per second, at most 640 pixels wide, with up to 300 frames, and they loop. Longer recordings are sampled evenly across their length.

Export frames

Select **Frames** (Export every frame as PNG (ZIP)). A progress bar shows "Exporting frames...", then a ZIP file downloads containing PNG images named **frame-0001.png**, **frame-0002.png** and so on. Frames are taken five times per second, at most 1,280 pixels wide, up to 120 frames.

Save a still

Select **Still** (Save the current frame as a PNG). A progress bar shows "Grabbing frame...", then a PNG downloads. The still is taken one second into the recording (or halfway through a recording shorter than two seconds), at most 1,280 pixels wide.

Trim a recording

1. Select **Trim**. The player opens with the trim controls showing (or select **Trim...** in the player).

2. Enter **Start** and **End** in seconds (to one decimal place). **End** starts as the full length.
3. Select **Export trimmed clip**.
4. The trimmed clip downloads as a new file with "-trimmed" added to its title: "Trimmed clip exported."

Trimming re-encodes in real time, so a 30-second clip takes about 30 seconds. The original recording is not changed. If **End** is not after **Start**, the message reads "End must be after start."

Delete a recording

Select **Delete** (the bin), then select it again within four seconds ("Click again to delete permanently"). The recording is removed from this browser. This cannot be undone.

File names

Downloads are named from the recording's title and the time it was made, for example **Recording-Sep-24-1042-AM-2026-09-24-05-12-33.mp4**. The date in the title follows your browser's language settings; the time stamp at the end is in UTC. Characters other than letters, numbers, spaces and hyphens are removed, spaces become hyphens, and the title part is limited to 48 characters.

If an export fails

The message explains why, for example "That recording could not be read.", "No frames could be read from that recording." or "The ZIP library could not be loaded." (frames export needs to load a small helper from the site the first time).

WEBSITE > SITE FEATURES > SCREEN RECORDER

Record a take

Choose a source and capture settings, add audio, draw a region, and control the recording with the recording bar.

Choose a source

Source	Description on screen	Good for
Screen or window	Pick any screen, window, or tab. Controls stay out of the video unless you share this tab.	Showing several apps or windows
This tab	Records this page. The recording bar is part of the page, so collapse it to keep it small.	Walking through a page or tool
Region of this page	Drag a rectangle or click an element. Everything outside it is cropped away.	A tidy clip of one panel or control

Source	Description on screen	Good for
Tool canvas	Records a tool's drawing surface directly — pixel-exact, and nothing on screen can spoil the take.	Animated or drawn output from a tool

When a source is not possible, it is greyed out with the reason:

- "No recordable canvas on this page." — the page has no canvas large enough to record;
- "This browser cannot capture the screen." — the browser does not let pages capture the screen (the **Tool canvas** source may still work).

Note: When you record this tab, anything shown on the page is in the video, including the recording bar. Collapse the bar to a dot, or record a region or a canvas, to keep it out.

Choose capture settings

Setting	Options	Default
Frame rate	15 fps — smallest, 24 fps — cinematic, 30 fps — standard, 60 fps — smoothest	30 fps
Quality	Low — smallest file, Balanced, High — sharpest text	Balanced
Resolution cap	Native, 1080p, 720p, 480p	Native
Countdown	None, 3 seconds, 5 seconds	3 seconds

Resolution cap scales down recordings wider than the chosen size (1080p is 1,920 pixels wide, 720p is 1,280, 480p is 854). **Native** keeps the source's own size. Higher quality and frame rate make larger files.

Add audio and a pointer highlight

Switch	Description on screen	Default
Microphone	Narrate while you record.	Off
Tab audio	Include sound the page itself makes.	On
Highlight the cursor	Draws an accent ring around the pointer.	Off

- The browser asks for microphone permission the first time. If the microphone cannot be used, recording continues without it and the message reads "Microphone unavailable — recording without it."
- **Tab audio** is recorded only when the shared screen, window or tab offers sound; your browser's sharing dialog may have its own "share audio" option.
- If the browser has no microphone support, the switch is greyed out with "Not available in this browser."

Record a region

1. Choose **Region of this page** and select **Start recording**.
2. The page dims with the hint "**Drag** to draw a region, or **click** an element to snap to it. **Esc** cancels."
3. Either drag a rectangle, or move over the page (a box outlines the element under the pointer) and click to use that element.
4. Your browser asks to share this tab. Allow it.

Only the region is recorded; the rest of the tab is cropped away. A click or a very small drag (under 12 pixels) counts as choosing the element under the pointer.

Record a tool canvas

Choose **Tool canvas** and select **Start recording**. The recorder uses the canvas a tool offers for recording, or else the largest visible canvas on the page. No sharing dialog is needed.

The countdown

With a countdown set, a large number counts down on the page before recording starts.

The recording bar

While recording, a small bar floats on the page:

Part	What it does
Grip	Drag to move the bar
Red dot and timer	Shows elapsed time
Size	File size so far
Pause recording / Resume recording	Pauses or resumes (Alt + Shift + P)
Stop and save	Ends the recording and saves it (Alt + Shift + R)
Discard recording	Ends and throws the recording away ("Recording discarded.")
Collapse to a dot / Expand controls	Shrinks the bar to a small dot, or restores it; remembered

Click a collapsed dot to expand it again.

When a recording stops by itself

- Your browser's own **Stop sharing** button ends the recording and saves it.
- A recording stops at **30 minutes**: "Time limit reached — recording stopped."

- If you try to leave or reload the page during a recording, the browser asks you to confirm.

After you stop

- The recording is saved to **My recordings**, titled "Recording" with the date and time, and the list opens with it highlighted.
- If there is little browser storage left (under about 50 MB), the recorder warns before you start: "Storage is nearly full — this recording may not save. Delete some clips first."
- If the browser refuses to store it, the file is downloaded straight away instead: "Saved to your downloads (browser storage was unavailable)."
- If nothing was captured, the message reads "Nothing was recorded."

Reset your setup

Select **Reset setup**, then **Confirm reset** within four seconds. The source and every setting return to their defaults: "Recorder setup reset to defaults." Press **Esc** while it says **Confirm reset** to cancel.

WEBSITE > SITE FEATURES > SCREEN RECORDER

Screen recorder reference

Every recorder option, default, output format, limit and message.

Setup dialog (Your Recorder)

Control	Options	Default
Recording source	Screen or window, This tab, Region of this page, Tool canvas	Screen or window
Frame rate	15, 24, 30, 60 fps	30 fps
Quality	Low — smallest file, Balanced, High — sharpest text	Balanced
Resolution cap	Native, 1080p, 720p, 480p	Native
Countdown	None, 3 seconds, 5 seconds	3 seconds
Microphone	On, off	Off
Tab audio	On, off	On
Highlight the cursor	On, off	Off
My recordings	Opens the recordings list	—
Reset setup / Confirm reset	Two-step reset of all the above	—
Start recording	Starts with the chosen source	—
Reset dialog position	Centres the dialog	—

Control	Options	Default
Close	Closes the dialog	—

All choices are remembered in this browser, as is whether the recording bar is collapsed.

Recording bar

Control	Action
Grip	Move the bar
Timer and size	Elapsed time and file size
Pause recording / Resume recording	Pause or resume
Stop and save	Stop and keep
Discard recording	Stop and throw away
Collapse to a dot / Expand controls	Shrink or restore the bar

Recordings list

Action	Output
Thumbnail (Play)	Opens the player
Title	Editable name
Download video	MP4 or WebM file
GIF	Animated GIF: 10 fps, up to 640 px wide, up to 300 frames, loops
Frames	ZIP of PNGs: 5 per second, up to 1,280 px wide, up to 120 frames
Still	One PNG at 1 second (or half the length), up to 1,280 px wide
Trim	New MP4 or WebM of the chosen span, re-encoded in real time
Delete	Removes the recording (select twice within 4 seconds)

Formats

Output	Format
Video	MP4 (H.264 video, AAC audio) where the browser can record it; otherwise WebM (VP9 or VP8 video, Opus audio)
Animated image	GIF, up to 255 colours

Output	Format
Frames	ZIP containing <code>frame-0001.png</code> and onward
Still	PNG

Limits

Limit	Value
Longest recording	30 minutes
Storage warning	Below about 50 MB of free browser storage
Region pick threshold	A drag under 12 pixels selects the element instead

Keyboard

Keys	Action
<code>Alt + Shift + R</code>	Open the setup dialog; while recording, stop and save
<code>Alt + Shift + P</code>	Pause or resume while recording
<code>Esc</code>	Close the dialog, the list, the player or the region picker; cancel Confirm reset
Arrow keys on the dialog grip	Move the dialog (<code>Shift</code> for finer steps)

Messages

Message	Meaning
A recording is already running.	You opened the setup during a recording
No recordable canvas on this page.	Tool canvas cannot be used here
This browser cannot capture the screen.	Screen sources are unavailable
Microphone unavailable — recording without it.	The microphone was refused or missing
Storage is nearly full — this recording may not save. Delete some clips first.	Less than about 50 MB free
Time limit reached — recording stopped.	30 minutes reached
Recording discarded.	Discard recording was selected
Recording saved — time, size.	The recording was kept
Saved to your downloads (browser storage was unavailable).	Storage refused; file downloaded instead
Nothing was recorded.	The recording was empty

Message	Meaning
Recording failed. / Could not start recording. / Recording cancelled.	Starting failed or was cancelled
Recorder returned to the center.	The dialog position was reset
Recorder setup reset to defaults.	Confirm reset was selected
GIF exported — size.	A GIF was downloaded
Trimmed clip exported. / End must be after start. / Trimming failed.	Trim results
That recording could not be read.	The stored recording is unreadable

WEBSITE > SITE FEATURES > SCREEN RECORDER

Troubleshooting the screen recorder

Fixes for common screen recorder problems.

The screen sources are greyed out

Why: "This browser cannot capture the screen." Most mobile browsers, and some older desktop browsers, do not let web pages capture the screen.

What to do: use a current desktop browser such as Chrome, Edge or Firefox, or use **Tool canvas** on a tool page.

Tool canvas is greyed out

Why: "No recordable canvas on this page." The page has no visible canvas larger than 80 by 80 pixels.

What to do: open a tool that draws on a canvas, or choose another source.

Nothing happened after Start recording

Why: you cancelled or closed your browser's sharing dialog, or denied permission.

What to do: select **Start recording** again and allow sharing. If you denied it permanently, allow screen sharing for auricartisan.com in your browser's site settings.

The recording bar is in my video

Why: with **This tab**, the bar is part of the page, so it is recorded.

What to do: collapse it to a dot, record a **Region of this page** that leaves it out, or use **Screen or window** and pick another window.

There is no sound

Possible causes:

- **Tab audio** was off, or the page made no sound.
- In your browser's sharing dialog, the option to share audio was not ticked (some browsers only offer audio for tabs).
- The microphone was refused ("Microphone unavailable — recording without it.").

The recording stopped by itself

Why: it reached 30 minutes, you pressed your browser's **Stop sharing**, or the shared window was closed.

The recording was downloaded instead of saved

Why: the browser refused to store it, usually because storage is full or the browser is in a private mode.

What to do: delete old recordings in **My recordings**, or keep the downloaded file.

Exporting a GIF is slow or the GIF is large

Why: GIFs are made in your browser and hold every frame as an image.

What to do: trim the recording first, record at a lower resolution, or download the video instead.

Trimming takes a long time

Why: trimming re-encodes the clip in real time, so it takes as long as the part you keep.

My recordings disappeared

Why: they are stored in this browser. Clearing site data, using a private window, or a different browser or profile means they are not there.

What to do: download recordings you want to keep.

WEBSITE > SITE FEATURES > SCREEN RECORDER

Screen recorder FAQ

Short answers about the screen recorder.

Are my recordings uploaded?

No. They are recorded and stored in your browser on this device. They leave it only when you download them.

Are recordings saved in my Library?

No. Recordings have their own list, **My recordings**, separate from the library of palettes and assets.

Can I record other websites or apps?

Yes, with **Screen or window**: your browser lets you pick any screen, window or tab to share.

Why MP4 in one browser and WebM in another?

The recorder uses MP4 where the browser can record it, because it plays almost everywhere. Otherwise it records WebM. The dialog tells you which.

Can I keep recording while I move to another page on the site?

No. Leaving or reloading the page ends the recording; the browser asks you to confirm first. Record with **Screen or window** if you need to move between pages, and pick the browser window.

Does the custom cursor appear in recordings?

Yes, when you record the page itself. Switch it off in Settings › Comfort for a clean system pointer, and use **Highlight the cursor** if you want the pointer emphasised.

[WEBSITE](#) > [SITE FEATURES](#) > [SCREEN RECORDER](#)

Screen recorder shortcuts

Keyboard shortcuts for the screen recorder.

Keys	Action
Alt + Shift + R	Open the recorder; while recording, stop and save
Alt + Shift + P	Pause or resume a recording
Esc	Close the dialog, recordings list or player; cancel the region picker
Arrow keys on the dialog grip	Move the dialog; hold Shift for finer steps

Alt + **Shift** was chosen to avoid browser shortcuts: **Ctrl** + **Shift** + **R** is your browser's hard reload. The full list is in [Keyboard shortcuts](#).

[WEBSITE](#) > [SITE FEATURES](#) > [SCREEN RECORDER](#)

Screen recorder glossary

Terms used in the screen recorder guides.

Term	Meaning
Source	What the recorder captures: a screen or window, this tab, a region, or a tool canvas.
Take	One recording, from start to stop.
Frame rate (fps)	How many images per second a video holds. Higher is smoother and larger.
Resolution cap	The largest width a recording is allowed; bigger sources are scaled down.
Canvas	A drawing surface that tools use for graphics and animation.

Term	Meaning
Region	A rectangle of the page, or one element, that a recording is cropped to.
MP4, WebM	Video file formats. MP4 plays almost everywhere; WebM is widely supported by browsers.
GIF	An animated image format that plays in most apps and web pages without a player.
Re-encode	To play a video and record it again, which is how trimming makes a new file.
Sharing dialog	The browser's own window asking which screen, window or tab to share.

WEBSITE > SITE FEATURES > SCREEN RECORDER

Screen recorder limits and accuracy

Limits on recording length, storage, formats and quality.

- **Length.** A recording stops at 30 minutes.
- **Storage.** Recordings use your browser's storage for this site, which the browser limits. A minute of high-resolution video can take several megabytes to tens of megabytes. The list shows how much is used and free.
- **Video length metadata.** Browsers do not always write a length into recorded files. Some players may show an unknown length or seek slowly in a downloaded WebM file; the recorder's own player and exports account for this.
- **GIF.** Up to 300 frames at 10 per second and 640 pixels wide, with at most 255 colours. Long recordings are sampled, not played frame by frame, and subtle gradients can band.
- **Frames.** Up to 120 PNG images, five per second, up to 1,280 pixels wide. It is a sampling of the recording, not every frame.
- **Trim.** Runs in real time and makes a new file; the quality matches the original recording's format.
- **Region crop.** Where the browser can crop the shared tab itself, it does so; otherwise the recorder crops each frame, which uses more processing power.
- **Browser support.** Screen capture depends on the browser. Most mobile browsers cannot capture the screen.

WEBSITE > SITE FEATURES > SCREEN RECORDER

Screen recorder privacy

What the recorder captures, where recordings are kept, and what is shared.

- **Permission first.** Nothing is captured until you start a recording and, for screen, window, tab and region sources, allow sharing in your browser's dialog. The microphone is used only if you switch it on and allow it.
- **What is captured.** Exactly what you shared: a screen or window can include other apps, notifications and personal information. Check what is visible before you record.
- **Where recordings live.** In your browser's storage for auricartisan.com, on this device only. They are not uploaded, not added to your account and not placed in your Library.

- **Sharing.** A recording leaves your device only when you download it and send the file yourself.
- **Preferences.** Your recorder settings and the dialog position are kept in this browser.
- **Deleting.** **Delete** in **My recordings** removes a recording. Clearing site data for auricartisan.com removes them all.

WEBSITE > SITE FEATURES > SCREEN RECORDER

Screen recorder release notes

User-facing history of the screen recorder, from the public changelog.

Date	Release	Change
2026-08-12	v0.9.11	Added a site-wide screen, tab, region and canvas recorder with video, animated GIF, PNG frame, poster and trim export.

The full entry is in the changelog at <https://auricartisan.com/library/changelog/>.

WEBSITE > SITE FEATURES > SCREEN RECORDER

Related to the screen recorder

Features related to the screen recorder.

- **Navigation dock** — the **Record screen** button.
- **Custom cursor** — how the pointer appears in recordings.
- **Feedback** — report a bug from the site; a recording you make can help you describe what happened.
- **Split view** — record two pages side by side with **This tab**.

WEBSITE > SITE FEATURES > SCREEN SAVER

Screen saver

The optional idle screen that fills the window with a colour from the site's colour atlas after a period of inactivity.

The screen saver is an optional idle screen. When you have not touched the page for a while, it fills the window with a single colour from the site's colour atlas, laid out as seven bands from its darkest shade to its lightest, with the colour itself sitting on its own step. A readout names the colour and gives its hex code, its OKLCH value, the mood it reads as, the art movement associated with it, and its contrast against black. A new colour arrives every twelve seconds, and a small clock shows the time. Move the mouse, press a key, scroll or touch the screen, and the page comes back exactly as you left it.

The screen saver is **off by default**. You choose whether it runs and how long the page must be idle first (1, 5, 10, 20 or 30 minutes).

Who it is for

People who leave the site open on a second screen or in a studio, and anyone who enjoys a slow tour of the site's colour atlas.

Where to find it

Settings (**Ctrl** + **,**) > **Comfort** > **Screen saver**.

Quick start

1. Press **Ctrl** + **,** and select **Comfort**.
2. Switch on **Screen saver**.
3. Under **Start after**, select **1m** to try it.
4. Leave the page alone for a minute or so.
5. The screen fills with a colour and its readout. Wait twelve seconds to see the next one.
6. Move the mouse. The page returns.

What you can do

- Turn the screen saver on or off.
- Choose how long the page must be idle before it starts.
- Read the name, hex, OKLCH, mood, movement and contrast of a new colour every twelve seconds.

reading-the-screen.md	What each part of the screen saver shows
reference.md	Settings, timings and what counts as activity
troubleshooting.md	Symptoms, causes and fixes
faq.md	Short answers

WEBSITE > SITE FEATURES > SCREEN SAVER

Get started with the screen saver

Turn the screen saver on, choose when it starts, and return to the page.

Turn it on

1. Press **Ctrl** + **,** to open Settings, then select **Comfort**.
2. Switch on **Screen saver** ("Ambient animation after long periods of inactivity.").
3. Under **Start after** (minutes of inactivity), select **1m**, **5m**, **10m**, **20m** or **30m**. The default is **10m**.

When it starts

The screen saver starts when the page has had no mouse movement, click, key press, scroll, touch or wheel movement for the time you chose. The site checks every ten seconds, so it can start up to about ten seconds after the time is reached.

It counts activity on this page only. Time spent in other tabs or apps counts as idle time for this page, so the screen saver may already be showing when you come back to the tab.

Return to the page

Do any of these: move the mouse, click, press a key, scroll, use the wheel, or touch the screen. The page comes back as you left it.

A hint, **Move to return**, shows at the bottom of the screen saver for its first minute, then fades.

Turn it off

Switch off **Screen saver** in Settings › Comfort. If it is showing at that moment (for example in another window you can see), it closes at once.

WEBSITE › SITE FEATURES › SCREEN SAVER

Reading the screen

What each part of the screen saver shows, from the colour bands to the readout and clock.

The colour bands

The whole screen is seven bands of one colour, from its darkest shade to its lightest. On a wide screen the bands run side by side; on a narrow or portrait screen they run top to bottom.

- The bands are steps of **lightness** in OKLCH: 0.22, 0.35, 0.48, 0.61, 0.74, 0.85 and 0.94. Each band shows its step number.
- The fourth band (0.61) is the colour's own step, marked as the sample.
- The darkest step is pure black for every colour.
- Colourfulness tapers towards both ends, because very dark and very light shades cannot hold a strong colour.
- Each step number sits on a small chip that keeps it readable on its band.

OKLCH describes a colour by its lightness (L), chroma or colourfulness (C) and hue (H), in a way that follows how people see colour. Stepping lightness in OKLCH gives even-looking shades.

The readout

Line	What it shows
Colour atlas and a number	The colour's number in the site's atlas of 8,192 colours, for example "6,400 / 8,192"
Name	The colour's name, for example Crocus Yellow
Hex	Its hex code
oklch	Its lightness, chroma and hue
reads as	The mood the atlas associates with it, for example calm or playful
movement	The art movement the atlas associates with it, for example Bauhaus or Art Deco
on black	Its WCAG contrast ratio against black

The rotation

- A new colour appears every twelve seconds, and a thin line shows the time until the next one.
 - Each time the screen saver starts, it begins with a different colour.
 - It pauses while the tab is hidden and resumes when you come back.
-

The foot of the screen

- **Auric Artisan** on one side.
 - A clock with the time and date. It uses 24-hour time if you chose **24-hour time** in Settings > Clock.
 - **Move to return**, for the first minute.
-

What is hidden

While the screen saver shows, the page utilities bar, the navigation dock, the right-edge menu line, the info bars and the clock strip are hidden. The pointer stays, since moving it is how you return.

WEBSITE > SITE FEATURES > SCREEN SAVER

Screen saver reference

Screen saver settings, timings, and what counts as activity.

Settings (Settings > Comfort)

Control	Values	Default
Screen saver	On, off	Off
Start after	1m, 5m, 10m, 20m, 30m	10m

The **Start after** buttons are dimmed while **Screen saver** is off.

What counts as activity

Mouse movement, mouse button press, key press, scrolling, touch, and mouse wheel. Any of them resets the idle time and closes the screen saver.

Timings

Item	Value
Idle check	Every 10 seconds

Item	Value
Time per colour	12 seconds
Move to return hint	First 60 seconds
Clock refresh	Every 30 seconds

Readout fields

Label	Content
Colour atlas	Atlas number of the colour, out of 8,192
Name	Colour name
Hex	Hex code
oklch	Lightness, chroma, hue
reads as	Associated mood
movement	Associated art movement
on black	WCAG contrast ratio against black

Bands

Seven OKLCH lightness steps: 0.22, 0.35, 0.48, 0.61 (the colour's own step), 0.74, 0.85, 0.94. Side by side on wide screens; stacked on narrow or portrait screens.

Related settings

Setting	Effect on the screen saver
Settings > Clock > 24-hour time	The screen saver clock uses 24-hour time
Language	The clock uses the page's language for dates

WEBSITE > SITE FEATURES > SCREEN SAVER

Troubleshooting the screen saver

Fixes for common screen saver problems.

The screen saver never starts

Possible causes and fixes:

- It is off. Switch on **Screen saver** in Settings › Comfort.
 - Something keeps registering as activity, for example a mouse that drifts slightly or a page that scrolls itself. Keep the mouse still.
 - A few pages do not include the screen saver. Try another page.
 - The idle check runs every ten seconds, so allow a few seconds beyond your chosen time.
-

It starts too soon or too late

What to do: change **Start after** in Settings › Comfort. The new time applies at the next check.

My computer's own screen saver or sleep takes over first

Why: your operating system's power settings are separate from the site. If the system dims or sleeps sooner than the site's delay, you will not see the site's screen saver.

What to do: choose a shorter **Start after**, or a longer delay in your system settings.

The colour readout is missing and only a plain colour shows

Why: the colour list is downloaded the first time the screen saver starts. If that fails, the screen saver uses a small built-in set of colours instead.

What to do: nothing is needed; it still works. Check your connection if you want the full atlas.

WEBSITE › SITE FEATURES › SCREEN SAVER

Screen saver FAQ

Short answers about the screen saver.

Does the screen saver stop my computer from sleeping?

No. It is part of the web page. Your computer's own power and sleep settings still apply.

Can I choose which colours it shows?

No. It picks a random starting colour from the atlas and moves on every twelve seconds.

Where do the colours come from?

From the site's colour atlas of 8,192 named colours, each with a mood and an art movement associated with it.

Does it use much power?

It is drawn with plain page elements rather than animation-heavy graphics, and it pauses while its tab is hidden.

Is the screen saver the same as eye rest?

No. Eye rest reminds you to look away while you are working; the screen saver appears when you have stopped. See [Eye rest](#).

The screen saver has no keyboard shortcut: any key press closes it.

WEBSITE > SITE FEATURES > SCREEN SAVER

Screen saver glossary

Terms used in the screen saver guides.

Term	Meaning
Idle	No mouse, keyboard, scroll, wheel or touch activity on the page.
Colour atlas	The site's collection of 8,192 named colours with mood and movement notes.
OKLCH	A way of writing colour as lightness (L), chroma (C) and hue (H) that follows human perception.
Lightness step	One of the seven bands, each a fixed OKLCH lightness from 0.22 to 0.94.
Chroma	How colourful a colour is, from grey (0) upwards.
Contrast on black	The WCAG contrast ratio between the colour and pure black.

WEBSITE > SITE FEATURES > SCREEN SAVER

Screen saver limits and accuracy

What the screen saver's values mean and how precise they are.

- **Values.** The OKLCH values are shown to two decimal places for lightness and chroma and to whole degrees for hue. The contrast against black uses the WCAG 2 formula, to two decimal places.
- **Shades.** The seven bands are drawn in OKLCH where your browser supports it; very colourful shades may be outside what your screen can show and are drawn as close as the screen allows.
- **Mood and movement.** "reads as" and "movement" are descriptive notes from the colour atlas, not measurements.
- **Timing.** The idle check runs every ten seconds, so the screen saver can start up to about ten seconds after your chosen delay.

- **Scope.** It runs only in the page's own tab and does not replace your operating system's screen saver or power settings.

WEBSITE > SITE FEATURES > SCREEN SAVER

Screen saver privacy

What the screen saver stores and downloads.

- Your on or off choice and delay are kept in this browser, as part of your settings.
- The screen saver watches for activity only to know when you are idle. It does not record or send what you do.
- The first time it starts, it downloads a small list of atlas colours from auricartisan.com. Nothing is sent in return.

WEBSITE > SITE FEATURES > SCREEN SAVER

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Search and Spotlight

Spotlight, the site-wide search palette opened with Ctrl + K, with scopes, colour answers, filters and commands.

Spotlight is the search box that floats over any page when you press **Ctrl** + **K** (**Cmd** + **K** on a Mac) or select **Search** in the header. Type a few letters and it lists matching pages, tools, documentation and Learn articles from across the site, with a preview of the highlighted result and the reasons it ranked there. Tabs narrow the search to **Pages**, **Tools**, **Docs** or **Learn**, and a **Web** tab searches trusted sources beyond the site.

Spotlight also answers some questions directly. Type a hex colour such as **#2f5eaa** and it shows that colour's values and its contrast on black and white. Type two hex colours and it judges them as a text-and-background pair against WCAG. Type **>** and it becomes a command palette that can switch the theme, open the guide, the library or Settings, switch language, and more.

For a larger results page with filters, Spotlight hands your query to the full search page at <https://auricartisan.com/search/>, which is documented in [Search](#).

Who it is for

- Anyone looking for a tool, article or page without browsing the menus.
- Keyboard users who want to reach site actions without the mouse.
- Designers who want a quick reading of a colour or a colour pair.

Where to find it

- Press **Ctrl** + **K** (**Cmd** + **K**) on any page.
- Select the magnifier (**Search**) in the header, or **Search** on a narrow screen.
- In the mobile drawer, tap **Search tools, colours and pages**.
- Right-click the page and choose **Site**, then **Search the site**.

Quick start

1. Press **Ctrl** + **K**. Spotlight opens with your recent searches and a list of **Quick Actions**.
2. Type **gamut**. Results appear as you type, with matching words highlighted.
3. Press **Down** to move through the results. The preview on the right shows each one.
4. Press **Enter** to open the highlighted result, or **Ctrl** + **Enter** to open it in a new tab.
5. Press **Ctrl** + **K** again and type **#d3af37**. The preview shows the colour, its RGB value and its contrast on black and white.
6. Clear the box, type **>**, and choose **Toggle light and dark**.
7. Press **Esc** to clear the box, and **Esc** again to close Spotlight.

What you can do

- Search the whole site, or only pages, tools, documentation or Learn articles.
 - Search trusted sources on the wider web.
 - Re-run recent searches.
 - Read a colour's values and contrast, or check a colour pair against WCAG, straight from the search box.
 - Use field filters such as `title:` and `path:`.
 - Run site commands with `>`.
 - Open the full search page for more results and filters.

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Get started with Spotlight

Open Spotlight, learn its parts, and run your first search.

Open and close Spotlight

- **Open:** press **Ctrl** + **K** (**Cmd** + **K** on a Mac), or select **Search** in the header.
- **Close:** press **Esc** (the first press clears what you typed, the second closes), press **Ctrl** + **K** again, or click the dimmed page around Spotlight.

While Spotlight is open, the page behind it does not scroll.

The parts of Spotlight

1. **Search box.** A magnifier, an optional mode chip (for example **Colour** or **Command**), the text box, an **ESC** hint and an X to clear the box. The box's placeholder names the current scope, for example "Search Auric Artisan...".
2. **Scope tabs.** **All**, **Pages**, **Tools**, **Docs**, **Learn** and **Web**.
3. **Results list** on the left.
4. **Preview pane** on the right. It shows details of the highlighted result, or the answer when you type a colour.
5. **Footer.** Key hints (**↑** **↓** navigate, **↵** open, **TAB** filter, **ESC** close) and, on the right, a count such as "12 results · 3ms".

Your first search

1. Open Spotlight. Before you type, it shows:
 - **Recent**: up to six of your recent searches, with a **Clear** button;
 - **Quick Actions**: shortcuts to Full Search, Collections, URL Analyzer, Color Science Lab, Documentation, Learn Color, Vision Simulations, Install the PWA and Install Extension.
2. Type at least two characters, for example **contrast**.
3. Results appear under **Results**. Each shows an icon for its kind, the title with your words highlighted, a short excerpt and the page address.
4. Move through them with **Up** and **Down**, or point at them. The preview pane shows the highlighted page's type, title, address, description and a **Why it ranks here** chart.
5. Press **Enter** to open the highlighted result. Hold **Ctrl** (**Cmd** on a Mac) as you press **Enter** to open it in a new tab.

Result: the page opens and Spotlight closes. Your search is added to **Recent**.

The first time you open Spotlight on a page, it prepares the site index in the background. For a moment the list may read "Search engine is loading..."; results then appear as you type.

Go further

- At the foot of the results, **View all results for "..."** opens the full search page with filters and previews.
- Press **Tab** to move to the next scope tab. See [Scopes and results](#).
- Type a hex colour or two. See [Colour answers and filters](#).
- Type **>** for commands. See [Commands](#).

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Colour answers and filters

Get instant colour and contrast answers in Spotlight, and use field filters, quoted phrases and exclusions.

Spotlight reads what you type and, for some kinds of query, answers directly. A small **mode chip** at the start of the search box says how it read your query.

You type	Chip	What Spotlight does
Ordinary words	none	Searches the site
One hex colour, such as #2f5eaa	Colour	Shows the colour's values in the preview
Two hex colours, such as #ffffff #2f5eaa	Contrast pair	Judges the pair against WCAG in the preview
> followed by anything	Command	Lists commands (see Commands)
A field filter such as title:gamut	title:gamut	Searches only that field

Read a colour

1. Open Spotlight and type a colour as `#` and six hex digits, for example `#2f5eaa`, with nothing else.
2. The chip reads **Colour**. The preview pane shows:
 - a swatch of the colour with its OKLCH value;
 - **Hex, RGB, On black** and **On white** (the WCAG contrast ratio of the colour against black and against white);
 - a link, **Check it against a background**, which opens the Contrast Checker with this colour.
3. The list shows **Pages that mention it** (up to three pages whose text contains that hex code), or the note "Nothing in the index mentions this colour by name — the answer is on the right."

Check a colour pair

1. Type two hex colours, for example `ffffff 2f5eaa`. The first is treated as the text colour and the second as the background.
2. The chip reads **Contrast pair**. The preview pane shows:
 - two swatches with "Aa" drawn in each colour on the other;
 - the contrast ratio;
 - three verdicts: **AA body** (pass or fail at 4.5), **AAA body** (7.0) and **AA large** (3.0);
 - **Open in the checker**, which opens the Contrast Checker with both colours.

Only six-digit hex codes with a `#` are recognised. Three-digit codes, colour names and other formats are searched as text.

Field filters

Start the query with a field name and a colon to search one part of each page:

Filter	Searches
<code>title:</code>	Page titles
<code>desc:</code>	Page descriptions
<code>tag:</code>	Page tags
<code>path:</code>	Page addresses, for example <code>path:/tool/</code>
<code>type:</code>	The kind of content
<code>category:</code>	The page category

Put a phrase in quotes after the colon to match it exactly, for example `title:"colour vision"`. The chip shows the filter you used.

Phrases and exclusions

- Put words in double quotes to require that exact phrase: **"contrast ratio"**.
- Put a minus sign before a word to leave out pages that contain it: **palette -gradient**.

These work in the full search page too.

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Scopes and results

Narrow Spotlight to pages, tools, documentation, Learn or the web, read the results and preview, and reuse recent searches.

Scope tabs

The tabs under the search box decide where Spotlight looks. The box's placeholder changes to match.

Tab	Searches	Placeholder
All	Everything on the site	Search Auric Artisan...
Pages	Site pages such as home, collections, company and security (not tools, documentation or Learn)	Search pages...
Tools	Every tool page	Search tools...
Docs	Documentation and developer references	Search documentation...
Learn	Learn colour-science guides	Search learn guides...
Web	Trusted sources on the wider web	Search the web...

Switch scope by selecting a tab, or press **Tab** (next) and **Shift** + **Tab** (previous) while the search box has focus. Your query re-runs in the new scope at once. Spotlight remembers the scope you chose until you reload the page.

With an empty box, each scope shows its own launch points:

Scope	Heading	Launchers
All	Quick Actions	Full Search, Collections, URL Analyzer, Color Science Lab, Documentation, Learn Color, Vision Simulations, Install the PWA, Install Extension
Pages	Jump to Pages	Home, Collections, About, Pricing, FAQ, Contact, Security
Tools	Jump to Tools	URL Analyzer, Color Science Lab, Vision Simulations, ASCII, Ishihara Plates, General Tools

Scope	Heading	Launchers
Docs	Jump to Docs	Documentation Home, Changelog
Learn	Jump to Learn	Learn Color, Blog
Web	Web search	A hint: "Type at least 2 characters to search trusted sources across the web."

Reading the results

- Searching starts once you have typed two characters.
- Up to **8** results are listed, under **Results**. The footer shows the total and how long the search took, for example "23 results · 2ms".
- Each result shows an icon for its kind (page, documentation, tool, article and so on), the title with your words highlighted, an excerpt, and the page address.
- The last row, **View all results for "..."**, opens <https://auricartisan.com/search/> with your query, where you can see every result with filters and previews.

The preview pane

When a result is highlighted (by the arrow keys or by pointing at it), the pane on the right shows:

- the kind of page, its title, address and description;
- **Why it ranks here:** up to four bars, one for each part of the page your words matched (such as its title, tags, description or body text), each labelled with how heavily that part counts, for example ×6 for the title. Longer bars contributed more.

When nothing is found

The list reads "No results for "...", with "in Pages" (or the scope you chose) when a scope is active. Under **Try instead:**

- **Show all N results** — shown when the query matches elsewhere on the site but not in this scope. Selecting it switches to **All**.
- **Search the web for "..."** — switches to the **Web** tab.
- **Open full search page** — opens the full search page with your query.

Searching the web

The **Web** tab searches a curated set of trusted sources beyond auricartisan.com.

1. Select **Web** (or **Search the web for "..."** under **Try instead**).

2. Type at least two characters. The list reads "Searching trusted sources...".
3. Up to 8 results appear, each with its title, an excerpt and the source's name. The footer shows the count, the time taken and how many pages were checked.
4. Select a result. It opens in a new tab.

If the web search service cannot be reached, the list reads "Global search is unavailable right now". If no trusted source matches, it reads "No trusted web results for "...". Web search needs a network connection.

Recent searches

- When you open a result, the query that found it (if at least two characters) is added to **Recent**, most recent first. Up to six are kept, without duplicates.
- **Recent** shows whenever the box is empty. Select an entry to run it again.
- Select **Clear** beside the heading to remove them all.

Recent searches are kept in this browser only.

How results are ranked

Results are ranked by how well your words match, with more weight for matches in the title and tags than in the body text. Pages whose title starts with or contains your whole query rank higher, and pages that you have opened from search before get a small boost in this browser. Close spelling mistakes are still matched, and common alternative words are understood: for example **color** finds "colour", **a11y** finds accessibility pages, and **audit** finds the Analyzer.

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Spotlight reference

Every Spotlight control, key, launcher, command, query mode and message.

Ways to open

Method	Result
Ctrl + K / Cmd + K	Opens Spotlight, or closes it if open
Header Search button	Opens Spotlight
Drawer Search tools, colours and pages	Opens Spotlight
Right-click > Site > Search the site	Opens Spotlight

Controls

Control	What it does
Search box	Type a query; results update as you type
Mode chip	Shows Colour , Contrast pair , Command or the field filter in use
ESC hint	Reminder that Esc clears, then closes
Clear search (X)	Empties the box and shows the launchers
Scope tabs	All , Pages , Tools , Docs , Learn , Web
Results list	Up to 8 results, commands, launchers or recent searches
Preview pane	Details of the highlighted result, or the colour answer
Recent › Clear	Deletes your recent searches
Footer count	Results and time, command count, or "colour" / "contrast pair"
Dimmed page	Click to close

Keys

Keys	What they do
Up / Down	Move through the list
Enter	Open or run the highlighted row
Ctrl + Enter / Cmd + Enter	Open the highlighted result in a new tab
Tab / Shift + Tab	Next or previous scope tab
Esc	Clear the box; if already empty, close

Query modes

Query	Mode	Minimum
Words	Search	2 characters
#rrggbb alone	Colour	—
#rrggbb #rrggbb	Contrast pair (first = text, second = background)	—
>...	Command	—
title: , desc: , tag: , path: , type: , category:	Field filter	—
"phrase"	Exact phrase	—

Query	Mode	Minimum
<code>-word</code>	Exclude word	—

Colour answer fields

Field	Meaning
Swatch and OKLCH	The colour and its OKLCH value
Hex	Hex code
RGB	RGB value
On black	WCAG contrast ratio against <code>#000000</code>
On white	WCAG contrast ratio against <code>#FFFFFF</code>
Check it against a background	Opens the Contrast Checker with this colour

Contrast pair fields

Field	Meaning
Two "Aa" swatches	Each colour drawn on the other
Ratio	WCAG contrast ratio
AA body	Pass at 4.5:1 or more
AAA body	Pass at 7.0:1 or more
AA large	Pass at 3.0:1 or more
Open in the checker	Opens the Contrast Checker with both colours

Commands

Command	Available when
Toggle light and dark	The page has the header theme button
Open the page guide	The page has the guide button
Open the library	The page has the library button
Open settings	The page has Settings
Switch language	The page has the language button
Open the full search page	Always

Command	Available when
Install the app	Always

Launchers (empty box)

Scope	Launchers and addresses
All	Full Search /search/ , Collections /collections/ , URL Analyzer /tool/analyzer/ , Color Science Lab /tool/color-science-lab/
All (continued)	Documentation /library/documentation/ , Learn Color /library/learn/ , Vision Simulations /tool/vision-simulation/
All (continued)	Install the PWA /download/ , Install Extension /extension
Pages	Home, Collections, About, Pricing, FAQ, Contact, Security
Tools	URL Analyzer, Color Science Lab, Vision Simulations, ASCII, Ishihara Plates, General Tools
Docs	Documentation Home, Changelog
Learn	Learn Color, Blog

Messages

Message	When
Search engine is loading...	The index is still being prepared
No results for "..." (in Scope)	Nothing matched
Show all N results	Matches exist outside the chosen scope
Search the web for "..."	Offered when nothing matched on the site
Open full search page / View all results for "..."	Hands the query to the search page
Searching trusted sources...	A web search is running
Global search is unavailable right now	The web search service could not be reached
No trusted web results for "..."	The web search found nothing
Type at least 2 characters to search trusted sources across the web.	The Web tab with an empty box
No command matches that on this page.	Command mode found nothing
Nothing in the index mentions this colour by name — the answer is on the right.	Colour mode with no matching pages

Commands

Use Spotlight as a command palette by typing > to switch theme, open the guide, library or settings, change language and more.

Type > at the start of the Spotlight box to switch to **command mode**. The chip reads **Command**, and the list shows actions you can run on this page instead of pages you can open.

Run a command

1. Press **Ctrl** + **K** and type >.
2. The list shows every command available on this page, under the heading **Commands**. The footer counts them, for example "7 commands".
3. Keep typing to narrow the list, for example >theme.
4. Select a command, or highlight it and press **Enter**.

If nothing matches, the list reads "No command matches that on this page."

The site's commands

Command	Description	Shows
Toggle light and dark	The header's theme button	The current theme, and ⌘T
Open the page guide	What this page is, and its tour	—
Open the library	Saved palettes, gradients and reports	—
Open settings	Theme, motion, density, language	⌘,
Switch language	English ⇌ हिन्दी	The current language
Open the full search page	The whole index, with filters and instant answers	—
Install the app	Offline cache and an app window	—

A command appears only when the page has the control it drives. For example, **Open the library** is missing on a page without the library button.

The key hints are shown in Mac notation: **⌘T** is **Alt** + **T**, and **⌘,** is **Ctrl** + **,** on Windows and Linux.

Commands a page adds

Some tools add their own commands, listed first under their own headings. For example, the Portfolio Builder uses Spotlight as its toolbar and adds commands for its sections, typefaces and publishing. These appear only on that tool's page. See the tool's own documentation for its commands.

Commands in Hindi

When the site is in Hindi, commands are shown in Hindi, and you can type either the Hindi or the English name to find them.

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Troubleshooting Spotlight

Fixes for common problems with Spotlight search.

Ctrl + K opens my browser's address bar or search

Why: Spotlight loads a moment after the page. A shortcut pressed before that goes to the browser.

What to do: wait for the page to finish loading, or select **Search** in the header.

The list says "Search engine is loading..."

Why: the first time you open Spotlight on a page, it builds its search index in the background.

What to do: wait a moment and keep typing; results appear once the index is ready. On a slow connection this takes longer.

A page I know exists does not appear

Possible causes and fixes:

- A scope tab is hiding it. Select **All**, or **Show all N results** under **Try instead**.
- You typed only one character. Type at least two.
- Only 8 results are listed. Select **View all results for "..."** for the full list.
- A **-word** in your query excluded it, or a quoted phrase is too strict. Remove it.

Web search says "Global search is unavailable right now"

Why: the Web tab needs a network connection and the site's web search service.

What to do: check your connection and try again later, or search the site with **All**.

Typing a colour does not show a colour answer

Why: only six-digit hex codes with a **#**, and nothing else in the box, are read as a colour. **#fff**, **rebeccapurple** or **rgb(...)** are searched as text.

What to do: type the full six-digit form, for example `#ffffff`. For other formats, use the Contrast Checker or the colour tools.

A command is missing

Why: commands appear only when the page has the control they drive.

What to do: go to a page that has it, or use the control directly, for example the header's theme button.

Recent searches are gone

Why: they are kept in this browser and are lost if you clear site data, use a private window, or select **Clear**.

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Spotlight FAQ

Short answers about Spotlight search.

What is the difference between Spotlight and the search page?

Spotlight is the quick box that floats over any page and shows up to 8 results. The search page at <https://auricartisan.com/search/> shows every result with filters, previews and answers. **View all results for "..."** moves your query from one to the other. The search page is documented in [Search](#).

Does Spotlight work offline?

Searching the site can work offline once you have prepared the offline version on the Download page, because the site's search index is part of it (see [Download and offline](#)). Opening a result offline works only for pages that were saved. The **Web** tab always needs a connection.

Can I search in Hindi?

Commands can be found by their Hindi or English names. Page search matches the English text of pages, so English words give the best results.

Why does a result I open often move up?

Spotlight gives a small boost to pages you have opened from search before, in this browser.

Does Spotlight show ads?

It can show a compact sponsored strip while ads are running on the site. The **Ads in panels & search** setting controls it on plans that include ad preferences (see [Settings panel > Tooltips and ads](#)).

What does **Ctrl** + **Shift** + **K** do?

It opens the Feature Kit (calculator, converter and other small tools), which is separate from Spotlight. See [Kits](#).

Spotlight shortcuts

Keys for opening and using Spotlight.

Keys	Action
Ctrl + K (Cmd + K on a Mac)	Open or close Spotlight
Up / Down	Move through results
Enter	Open the highlighted result or run the command
Ctrl + Enter (Cmd + Enter)	Open the highlighted result in a new tab
Tab	Next scope tab
Shift + Tab	Previous scope tab
Esc	Clear the box, then close Spotlight
> as the first character	Command mode

In some kits, **Ctrl** + **K** moves to the kit's own search field while that kit is open. See [Kits](#) and [Keyboard shortcuts](#).

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Spotlight glossary

Terms used in the Spotlight search guides.

Term	Meaning
Spotlight	The floating search box opened with Ctrl + K .
Scope	The part of the site a search covers: All, Pages, Tools, Docs, Learn or Web.

Term	Meaning
Launcher	A shortcut row shown when the search box is empty.
Index	The list of the site's pages and their words that Spotlight searches.
Preview pane	The panel beside the results showing details of the highlighted result or a colour answer.
Field filter	A prefix such as title: that limits a search to one part of each page.
Exclusion	A word with a minus sign in front, such as -gradient , which removes matching pages.
Command mode	The mode entered by typing > , which lists actions instead of pages.
Contrast ratio	The WCAG measure of lightness difference between two colours, from 1:1 to 21:1.
AA, AAA	WCAG contrast levels: AA body text needs 4.5:1, AAA needs 7:1, AA large text needs 3:1.
OKLCH	A way of writing a colour as lightness, chroma and hue that follows human perception closely.

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Spotlight limits and accuracy

What Spotlight searches, how its colour answers are computed, and its limits.

What is searched

- Spotlight searches the site's own search index: the titles, descriptions, tags, categories, addresses and text of the site's pages. It does not search inside your saved library items or inside tool results.
- The **Web** tab searches a curated set of trusted outside sources through the site's web search service, not the whole web.
- Scopes are decided by page address: **Tools** is every page under **/tool/**, **Docs** is under **/library/documentation/**, **Learn** is under **/library/learn/**, and **Pages** is everything else.

Result limits

- Searches start at two characters.
- Spotlight lists up to 8 results; the full search page lists all of them.
- Up to six recent searches are kept.
- Web results are limited to 8.

Colour answers

- Contrast ratios use the WCAG 2 relative-luminance formula and are shown to two decimal places.
- Only **#** plus six hex digits is recognised as a colour. Colours are treated as sRGB.

- The pass and fail verdicts use the WCAG 2 thresholds: 4.5:1 for AA body text, 7:1 for AAA body text and 3:1 for AA large text.
- The answer is a quick reading, not an audit. For a page-wide check, use the Analyzer.

Language

The index holds the English text of pages. Searching in Hindi finds commands, but page results depend on English words.

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Spotlight privacy

What Spotlight stores and what it sends over the network.

Stored in your browser

- Your last six searches (the **Recent** list). Select **Clear** to delete them.
- A small record of which results you have opened from search, used only to rank those pages a little higher for you next time.

Both stay in this browser and are not sent to Auric Artisan.

Uses the network

- **Site searches** run inside your browser against the site's search index, which is downloaded from auricartisan.com. Your query is not sent anywhere.
- **Web** searches send your query to the site's web search service to find matches in trusted outside sources.
- Opening a web result opens that outside website in a new tab.

WEBSITE > SITE FEATURES > SEARCH AND SPOTLIGHT

Related to Spotlight

The search page, tools and features related to Spotlight.

- **Search** — the full search page at <https://auricartisan.com/search/>.
- **Contrast Checker** — where colour answers lead.
- **Analyzer** — a full accessibility audit of a page.
- **Guide and page outline** — the guide has its own filter box for the current page.
- **Context menu** — **Search the site** and, for a selection, **Search this site** and **Search the web**.
- **Kits** — the Menu Kit and Status Kit have their own search fields.

WEBSITE > SITE FEATURES > SETTINGS PANEL

Settings panel

What the Settings panel is, how to open it, and what you can change with it on every page of Auric Artisan.

The Settings panel, titled **Your Settings**, is a floating panel that changes how the whole site looks and behaves for you. It holds your accent colour, theme, language and text size; comfort options such as reading mode, reduced motion and eye-rest reminders; which info bars appear; how clocks show the time; how tooltips behave; ad preferences; and a list of keyboard shortcuts.

Every change applies at once, on the page you are on and on every page you open afterwards. The panel keeps your choices in this browser, so they work without an account. If you have the site open in several tabs, a change in one tab is picked up by the others. You can also save all your settings to a file and load them again on another browser or device.

The panel is modeless: it floats over the page without dimming it, so you can keep reading and clicking the page while it is open. You can drag it, widen it, collapse it to its title bar and close it.

Who it is for

- Everyone who uses the site: the defaults suit most people, and every choice can be undone.
- People who need larger text, stronger contrast, underlined links or less motion.
- People who prefer the site in Hindi, a 24-hour clock or a particular time zone.
- Anyone who wants to move their setup to another browser.

Where to find it

On any page of <https://auricartisan.com>:

- press **Ctrl** + **,** (or **Cmd** + **,** on a Mac);
- open the page utilities bar at the bottom-left of the screen and select **Settings**;
- right-click the page and choose **Site**, then **Settings** (or **Keyboard shortcuts** to open the Shortcuts section);
- press **Ctrl** + **K**, type **>** and choose **Open settings**;
- right-click the clock strip and choose **All settings**, which opens the Clock section.

Quick start

1. Press **Ctrl** + **,** to open **Your Settings**.
2. In **Appearance**, select an accent swatch, for example **Emerald**. The whole site recolours.
3. Under **Theme**, select **Light**, **Dark** or **System**.
4. Under **Text size**, select one of the four **A** buttons to make type smaller or larger across the site.

5. Select **Comfort** in the section list and switch on anything you need, such as **Reduce motion** or **Underline links**.
6. Select **Export** at the bottom of the panel to keep a copy of your settings as `auric-settings.json`.
7. Press **Esc** or select the close button to put the panel away. Your choices stay in place on every page.

What you can do

- Recolour the site with 13 preset accents, any custom colour, or a shade from the live accent ramp, and keep up to 18 saved colours.
- Check that your accent is readable with a live WCAG contrast readout.
- Choose light, dark or system theme, English or Hindi, and one of four text sizes.
- Turn on reading mode, reduced motion, reduced transparency, boosted contrast and underlined links; turn the custom cursor off.
- Schedule eye-rest reminders and set up the idle screen saver.
- Choose which info bars, notices and demo chips appear, and whether the clock strip is shown.
- Set 12 or 24-hour time, seconds, date display, time zone and date format.
- Turn tooltips off, or make them more or less detailed.
- Adjust ad preferences (a paid perk).
- Restore one section, or everything, to its defaults; export and import your settings as a file.

Settings panel guides

Contents of the Settings panel guides, from opening the panel to backing up and resetting every setting.

This folder explains how to use the Settings panel: how to open it and find your way around, how to change each group of settings, and how to back up, restore and reset them. The reference lists every control with its values and default.

File	What it covers
getting-started.md	Open the panel, a tour of its parts, and your first change
change-the-appearance.md	Accent colour, saved colours, custom colours, theme, language and text size
comfort-options.md	Reading mode, motion, transparency, contrast, links, cursor, eye rest and screen saver
highlights-and-clock.md	Which bars and notices appear, and how clocks show the time
tooltips-and-ads.md	Tooltip detail levels and ad preferences
back-up-restore-and-reset.md	Export and import a settings file, restore a section, reset everything, the panel's right-click menu
reference.md	Every control, its values and its default
troubleshooting.md	Symptoms, causes and fixes
faq.md	Short answers to common questions

Get started with the Settings panel

Open the Settings panel, learn its parts, and make your first change.

Open the panel

Use whichever way is closest:

Where you are	What to do
Anywhere, with a keyboard	Press Ctrl + , (Cmd + , on a Mac). Press it again to close the panel.
Anywhere, with a mouse or touch	Select the page utilities button at the bottom-left of the screen, then Settings .
Right-clicking the page	Choose Site , then Settings . Choose Keyboard shortcuts to open the Shortcuts section directly.
In Spotlight search	Press Ctrl + K , type > , and choose Open settings .
On the clock strip	Right-click the strip and select All settings . The panel opens on the Clock section.

Where you are	What to do
On an info bar	Right-click the bar and select Settings . The panel opens on the Comfort section.

The page utilities bar is the launcher row that also holds the kits. It is described in [Header and navigation](#) and, in more depth, in [Kits](#).

A tour of the panel

The panel has four parts.

1. **The title bar.** It reads **Your Settings**. Drag it to move the panel; the position is remembered. On the right are four buttons:
 - **Focus mode** — the pin-style button shared with the kits. Its tooltip reads "Keep Settings open through navigation and while opening other kits."
 - **Resize** — switches between the normal size and a wider size (up to 980 pixels, or the width of your window).
 - **Minimize** — collapses the panel to its title bar. Select the title bar, or the same button (now **Restore**), to bring it back.
 - **Close settings** — the X.
2. **The section list.** Appearance, Comfort, Highlights, Clock, Tooltips, Ads and Shortcuts. Each shows how many controls it holds. With a section selected, press the **Left** and **Right** arrow keys to move between sections.
3. **The section body.** The controls for the selected section. Most sections end with **Restore section defaults**.
4. **The footer.** **Export** and **Import** on the left; **Reset all** and a reminder of the **Ctrl** + **,** shortcut on the right.

The panel does not dim or block the page. You can scroll and click the page while it is open.

Note: The Ads section appears only while the site is showing ads. If ads are switched off site-wide, the section is not shown at all.

Make your first change

1. Open the panel with **Ctrl** + **,**.
2. In **Appearance**, look at the **Preview** card at the top. It shows a heading, an accent chip, a link, a line of text and a button in your current look.
3. Under **Accent color**, select **Sapphire**. The preview, the panel and the whole page change to blue at once.
4. Under **Text size**, select the largest **A (X-Large)**. The text across the site grows.
5. Select **Comfort** in the section list and switch on **Underline links**.

6. Close the panel with **Esc**.

Result: every page you open now uses the sapphire accent, extra-large text and underlined links in articles. To undo the three changes, open the panel again and use **Restore section defaults** in Appearance and in Comfort, or select **Reset all**.

Close the panel

- Press **Esc**. If a drop-down list inside the panel is open, the first **Esc** closes the list and the second closes the panel.
- Press **Ctrl** + **,** again.
- Select the X in the title bar.

When the panel closes, keyboard focus returns to whatever you used to open it.

Next steps

- [Change the appearance](#)
- [Comfort options](#)
- [Back up, restore and reset](#)

WEBSITE > SITE FEATURES > SETTINGS PANEL

Back up, restore and reset

Export your settings to a file, import them on another browser, restore one section, reset everything, and use the panel's right-click menu.

Your settings live in this browser only. Clearing the browser's site data, using a private window or switching to another browser starts you from the defaults. A settings file lets you carry them across.

Export your settings

1. Open the panel (**Ctrl** + **,**).
2. Select **Export** in the footer.
3. Your browser downloads a file named **auric-settings.json**. A message confirms "Settings exported".

The file contains every setting in the panel, including your saved colours. It is plain JSON (see [Reference](#) for its fields). It contains no account details.

Import settings from a file

1. Open the panel on the browser you want to set up.

2. Select **Import** in the footer.
3. Choose an **auric-settings.json** file (any **.json** file is accepted for selection).
4. The settings apply at once, including the theme. A message confirms "Settings imported".

What happens to the file's contents:

- Only settings the panel knows are read. Anything else in the file is ignored.
- A setting missing from the file is set to its default.
- A value that is not allowed (for example a text size that does not exist) is replaced by that setting's default.
- If the file is not valid JSON, nothing changes and the message reads "That file isn't valid settings". If the file cannot be read, the message reads "Couldn't read that file".

You can import the same file again later; the panel accepts a repeat of the same file.

Restore one section

Every section except Shortcuts ends with **Restore section defaults**. It resets only that section's settings. For example, in Comfort it turns every switch back to its default and leaves your accent colour alone. A message names the section, for example "Clock restored to defaults".

Section	What its restore resets
Appearance	Accent, theme and text size (not language, not saved colours)
Comfort	Reading mode, reduce motion, reduce transparency, boost contrast, underline links, custom cursor, eye-rest reminders and interval, screen saver and delay
Highlights	Live demo chips, welcome bar, announcement bar, quick links bar, clock strip, hero notice
Clock	24-hour time, show seconds, show date, timezone, date format
Tooltips	Show tooltips, detailed tooltips, advanced tooltips
Ads	Show ads, ad density, ads in panels & search

Reset everything

1. Select **Reset all** in the footer.
2. A confirmation covers the panel: "Reset **all** settings to their defaults? Your accent, theme, comfort and clock preferences will be cleared."
3. Select **Reset all** to confirm, or **Cancel** (or press **Esc**, or click outside the card) to keep your settings.

After a reset, a message confirms "All settings reset to defaults". Your **saved colours are kept**, because they are a palette you built rather than a preference. Remove them one by one with the X on each swatch if you want them gone.

Tip: Export your settings before a reset if you might want them back.

Use the panel's right-click menu

Right-clicking inside the Settings panel opens a small menu of its own instead of the site's page menu.

- The heading shows the name of the setting you right-clicked, or **Settings** if you right-clicked elsewhere in the panel.
- **This setting** (only when you right-clicked a switch row): **Turn on** or **Turn off**.
- **Panel: Export, Import, Reset section** and **Reset all**. **Reset section** is unavailable in the Shortcuts section, which has nothing to reset. **Reset all** still asks for confirmation.

Press **Esc**, click elsewhere, scroll or resize the window to close the menu. **Esc** closes only the menu, not the panel.

WEBSITE > SITE FEATURES > SETTINGS PANEL

Change the appearance

Recolour the site with an accent, keep saved colours, and choose the theme, language and text size.

The **Appearance** section controls the site's accent colour, theme, language and text size. It opens first whenever you open the panel.

The **accent** is the site's highlight colour: the gold of links, active tabs, buttons, focus rings, kit launchers and tooltip borders. Changing it recolours all of those at once.

Read the preview and the contrast readout

At the top of the section are two live readouts.

- **Preview** (live appearance) shows a heading, an **Accent** chip, **A link**, a sample sentence and a **Primary button** drawn in your current accent, theme and text size.
- **Accent accessibility** (live WCAG contrast) shows two rows:
 - **Accent on background** — the contrast between your accent and the page background of the current theme.
 - **Text on accent** — the contrast between the accent and the text colour the site places on it. The site picks a dark or a light text colour automatically, whichever reads better.

Each row shows a ratio such as **4.87:1** and a badge. **Contrast ratio** is the WCAG measure of how far apart two colours are in lightness, from 1:1 (identical) to 21:1 (black on white).

Badge	Ratio	Meaning
AAA	7:1 or more	Meets the strictest WCAG level for body text
AA	4.5:1 or more	Meets the standard WCAG level for body text
AA Large	3:1 or more	Meets WCAG only for large text and interface parts
Fail	below 3:1	Too little contrast for text

Below the rows is a strip of seven **shades** of your accent, from darker to lighter. Select any shade to use it as your accent.

Choose a preset accent

1. Open the panel (**Ctrl** + **,**). **Appearance** is selected.
2. Under **Accent color** (gold + 12 premium tones), select a swatch. Hover a swatch to see its name.

The page recolours at once. The presets are:

Swatch	Hex
Gold (default)	#D3AF37
Champagne	#DEC68A
Rose Gold	#B76E79
Silver	#C4C7CE
Platinum Grey	#8A8F99
Bronze	#B08D57
Copper	#B87333
Brown	#8B5A2B
Maroon	#800020
Pink	#E75480
Emerald	#3EA882
Sapphire	#2F5EAA
Amethyst	#9966CC

Note: In the light theme, the default Gold accent is drawn as a slightly darker gold so that it stays readable on a light page. A colour you choose yourself, including Gold picked from a saved colour, is used exactly as chosen.

Use any colour you like

1. Under **Custom color** (any color you like), select the round colour chip. Your browser's colour picker opens.
2. Choose a colour. While you drag, the panel previews the colour; when you let go, the whole site takes it.
3. The hex value appears next to the chip, for example **#2E8B57**.

If your browser supports it, an **Eyedropper** button appears next to the chip. Select it, then click any pixel on your screen to make that colour your accent. Press **Esc** to cancel. Browsers without an eyedropper do not show the button.

You can also select any shade in the **Accent accessibility** shade strip to use it as a custom accent.

Keep colours in Saved colors

Saved colors is a palette of accents you want to come back to. Nothing is added to it unless you ask.

1. Set a custom colour as above.
2. Select the + button (**Save this color**) next to the hex value.
3. The colour appears at the front of **Saved colors**, and the hint reads, for example, "3 of 18 kept".

To use a saved colour, select its swatch. To remove one, select the small X on its corner.

- The palette holds up to **18** colours. When it is full, the + button is disabled; remove a colour first.
 - The + shows as done (**Already saved**) when the current colour is already in the palette.
 - **Restore section defaults** and **Reset all** keep your saved colours. Only the X removes them.
-

Choose a theme

Under **Theme**, select **Light**, **Dark** or **System**. **System** follows your device's light or dark setting and changes with it. The full story, including the header button and shortcuts, is in [Theme](#).

Choose a language

Under **Language** (भाषा — interface and articles), select **English** or **हिन्दी**. Choosing Hindi translates the page in place; choosing English reloads the page in English. See [Language](#) for what is translated.

Change the text size

Under **Text size** (scales type across the site), select one of the four **A** buttons, from smallest to largest:

Button	Size
Small	90% of the default
Default	100%
Large	112%
X-Large	125%

You can also use the keyboard anywhere on the site (not while typing in a field):

- **Alt** + **+** makes text larger by one step.
- **Alt** + **-** makes text smaller by one step.
- **Alt** + **0** returns to the default size.

A short message such as "Text size: Large" confirms each change.

Restore the section

Select **Restore section defaults** at the bottom of Appearance to return the accent, theme and text size to their defaults (Gold, System, Default). Your language and your saved colours are not changed. A message confirms "Appearance restored to defaults".

WEBSITE > SITE FEATURES > SETTINGS PANEL

Comfort options

Turn on reading mode, reduce motion and transparency, boost contrast, underline links, turn off the custom cursor, and schedule eye rest and the screen saver.

The **Comfort** section holds switches that make the site easier to read and calmer to use. Each switch takes effect at once and applies to every page. Open it with **Ctrl** + **,**, then select **Comfort**.

Reading mode

Reading mode gives a distraction-free layout with comfortable typography.

While it is on:

- floating chrome is hidden: the kit launchers, the right-edge menu strip, the info bars and the clock strip;
- the custom cursor is replaced by your system cursor;
- the main text sits in a narrower, centred column with larger type and more generous line spacing;
- the header no longer sticks to the top of the screen;
- a thin bar across the very top of the window fills as you scroll down the page;
- a **Reading mode** **×** chip appears near the bottom of the screen. Select it to leave reading mode.

Ways to switch it on or off:

- the **Reading mode** switch in Comfort;
- **Alt** + **R** anywhere on the site (not while typing in a field);
- right-click the page, choose **View**, then **Reading mode** (or **Leave reading mode**);
- on card pages (home, collections, blog, changelog, documentation, learn), right-click a card and select the **Reading** pill.

A short message ("Reading mode on" or "Reading mode off") confirms a change made from the right-click menu.

Reduce motion

Reduce motion minimises animations and transitions across the site. Animations finish instantly, smooth scrolling becomes an instant jump, and the rotating info bars swap messages without fading.

Toggle it with **Alt** + **M** anywhere on the site. A message confirms "Reduced motion on" or "Reduced motion off".

Note: This switch is the site's own setting. The site also respects your operating system's reduced-motion preference: with that on, the custom cursor is not shown and the eye-rest horizon does not animate, whatever this switch says.

Reduce transparency

Reduce transparency turns off blur and translucency, so panels and overlays are drawn as solid surfaces. This can make text over panels clearer and can help on slower devices.

Boost contrast

Boost contrast strengthens secondary text and borders for easier reading. Muted text is drawn in the stronger secondary text colour, and borders use a darker line.

Underline links

Underline links always underlines links inside articles and prose: paragraphs, list items, definitions, quotations and captions. Navigation menus and buttons are not changed.

Custom cursor

Custom cursor controls the ring and dot that follow your pointer. It is on by default. Switch it off to use your system cursor everywhere; the change is immediate, with no reload. See [Custom cursor](#).

Eye-rest reminders

Eye-rest reminders are gentle reminders to rest your eyes on a schedule. They are off by default.

1. Switch on **Eye-rest reminders**.
2. Under **Reminder interval** (minutes between reminders), select **20m**, **35m**, **45m** or **60m**. The default is 20 minutes.

The interval buttons are dimmed while the switch is off. Changing the interval restarts the countdown at once. The reminder itself, and its own options, are described in [Eye rest](#).

Screen saver

Screen saver shows an ambient colour screen after a period of inactivity. It is off by default.

1. Switch on **Screen saver**.
2. Under **Start after** (minutes of inactivity), select **1m**, **5m**, **10m**, **20m** or **30m**. The default is 10 minutes.

The delay buttons are dimmed while the switch is off. Switching the screen saver off while it is showing closes it at once. See [Screen saver](#).

Restore the section

Select **Restore section defaults** to return every Comfort switch and both timings to their defaults: everything off except **Custom cursor**, a 20-minute reminder interval and a 10-minute screen saver delay. A message confirms "Comfort restored to defaults".

[WEBSITE](#) > [SITE FEATURES](#) > [SETTINGS PANEL](#)

Highlights and clock

Choose which info bars, notices and demo chips appear, and set how the site's clocks show the time and date.

Highlights: bars, notices and chips

The **Highlights** section decides which extra strips and labels appear around page content. The bars themselves are described in [Info bars and notices](#).

Switch	What it shows	Default
Live demo chips	The highlighted "live / demo" chips above demo sections	On
Welcome bar	The rotating welcome bar above the page	Homepage only
Announcement bar	The site announcements bar	Homepage only
Quick links bar	The quick-links bar (documentation, changelog, timeline, blog, learn)	Homepage only
Clock strip	A live clock, date and time zone above every page	Off
Hero notice	The highlighted notice banner on the homepage hero	On

How the "homepage only" switches behave

The Welcome, Announcement and Quick links bars start in a third state: shown on the homepage only. In that state the switch appears on.

- Switch it **off** to hide that bar everywhere, including the homepage.
- Switch it **on** again to show that bar above **every** page, not only the homepage.
- To get back to "homepage only", select **Restore section defaults**.

The Quick links bar also shows by default at the foot of the Collections page, where it is part of the layout.

Hide a bar or chip from the page itself

Each bar, the hero notice and each demo chip has its own × button. Selecting it has the same effect as switching the matching setting off, so the switch in Highlights moves to off as well. For demo chips, one × hides every demo chip on the site.

Note: The tooltip on a bar's × says you can turn it back on in "Settings → Comfort". The switches are in the **Highlights** section.

Restore the section

Restore section defaults returns all six switches to the defaults in the table above. A message confirms "Highlights restored to defaults".

Clock: time and date display

The **Clock** section controls the live clock strip at the top of pages (when **Clock strip** is on in Highlights). The 24-hour choice is also used by the clock on the screen saver.

At the top, **Live preview** (your clock right now) shows the time and date exactly as your settings will draw them, updating every second.

Control	What it does	Values	Default
24-hour time	Shows clocks in 24-hour format instead of AM / PM	On, off	Off
Show seconds	Includes seconds on the live clock	On, off	On
Show date	Shows the calendar date next to the clock	On, off	On
Timezone	The time zone the clock shows (defaults to your location)	Auto-detect , or any time zone your browser lists	Auto-detect
Date format	How the date is written	Long , DD/MM/YYYY , MM/DD/YYYY	Long

The **Auto-detect** entry names the zone your device reports, for example "Auto-detect (Asia/Kolkata)". **Long** writes the weekday, month, day and year in words, for example "Thursday, September 24, 2026".

Set a fixed time zone

1. Open the panel and select **Clock**.
2. Open the **Timezone** list and choose a zone, for example **Europe/London**.
3. The preview switches to that zone at once.

To follow your device again, choose **Auto-detect** at the top of the list.

Quicker clock controls

Right-click the clock strip itself for a small **Clock settings** menu with a few extra choices (an **ISO** date format, and switches for the weekday and the zone label). It is described in [Info bars and notices](#). Its **All settings** link opens this Clock section.

Restore the section

Restore section defaults returns all five clock settings to their defaults. A message confirms "Clock restored to defaults".

WEBSITE > SITE FEATURES > SETTINGS PANEL

Tooltips and ads

Turn the site's tooltips off or change how much they show, and adjust ad preferences on paid plans.

Tooltips

Most buttons, links and cards on the site show a **tooltip** when you hover over them or move keyboard focus to them: a small card with a title, a description and sometimes a picture, tags, a keyboard shortcut and extra details.

The **Tooltips** section starts with a **Live preview** (how tooltips will look). It shows a sample tooltip for the Design System Generator with a picture, three tags, a description, the **Ctrl + K** shortcut and a details table, and it changes as you flip the switches below it.

Switch	What it does	Default
Show tooltips	Shows the rich hover and focus tooltips across the site. Off hides them; the preview reads "Tooltips are turned off".	On
Detailed tooltips	Expands the collapsible details: preview image, metadata and tags. Off keeps tooltips compact: title, description and shortcut.	On
Advanced tooltips	Always expands the data section (category, route, read time). Off keeps it collapsed.	Off

See more details in one tooltip

With **Advanced tooltips** off, a tooltip that has extra data shows an **Alt — More details** hint at its foot. While the tooltip is open, press **Alt** to expand the data section for that tooltip only. The next tooltip starts collapsed again.

Restore section defaults returns the three switches to their defaults.

Ads

The **Ads** section appears only while the site is showing ads. It opens with the note **Ad preferences** — "paid perk — free plan shows standard ads".

Control	What it does	Values	Default
Show ads	Shows sponsored slots across the site	On, off	On
Ad density	How many in-content slots appear per page	Standard, Reduced	Standard
Ads in panels & search	Shows the compact sponsored strip inside kits, Spotlight and search results	On, off	On

Ad density is dimmed while **Show ads** is off.

Who can change these

Ad preferences are a paid perk. Every tool on the site stays free on every plan either way.

- **Signed out or on the free plan:** the controls are shown but disabled. Selecting one opens an upgrade message: "Ad preferences are a paid perk — upgrade to hide ads or tune where they appear. Every tool stays free either way." Nothing changes until you upgrade.
- **On a plan that includes the ad-free perk:** the controls work like any other setting.

Plans and the ad-free perk are explained in [Account and billing](#).

Restore section defaults returns the three ad controls to their defaults.

WEBSITE > SITE FEATURES > SETTINGS PANEL

Settings panel reference

Every control in the Settings panel, with what it does, its values and its default, plus the settings file format and messages.

All settings apply immediately, are kept in this browser, and are shared by every tab of the site you have open.

Panel frame

Control	What it does
Title Your Settings	Drag to move the panel. The position is remembered.
Focus mode	Kit-style focus button. Tooltip: "Keep Settings open through navigation and while opening other kits."
Resize	Switches between normal width and a wider panel (up to 980 px). The choice is remembered.
Minimize / Restore	Collapses the panel to its title bar. Select the bar or the button to restore.
Close settings (X)	Closes the panel. Focus returns to the control that opened it.
Section list	Appearance, Comfort, Highlights, Clock, Tooltips, Ads, Shortcuts, each with a control count
Export	Downloads <code>auric-settings.json</code>
Import	Loads a settings file
Reset all	Resets every setting after a confirmation (saved colours are kept)
<code>Ctrl</code>  , hint	Reminder of the open and close shortcut

Appearance

Control	What it does	Values	Default
Preview	Live sample of heading, accent chip, link, text and button	Read-only	—
Accent on background	WCAG contrast of the accent against the page background	Ratio and badge	—
Text on accent	WCAG contrast of the automatic text colour on the accent	Ratio and badge	—
Shade strip	Seven shades of the accent; selecting one makes it your accent	7 swatches	—

Control	What it does	Values	Default
Accent color	Site-wide highlight colour	Gold, Champagne, Rose Gold, Silver, Platinum Grey, Bronze, Copper, Brown, Maroon, Pink, Emerald, Sapphire, Amethyst	Gold
Saved colors	Your palette of kept accents; select to use, X to remove	Up to 18	Empty
Custom color chip	Opens your browser's colour picker	Any sRGB colour	—
+ (Save this color)	Adds the custom colour to Saved colors	—	—
Eyedropper	Samples any pixel on screen as the accent (supported browsers only)	—	—
Theme	Light, dark, or follow the device	Light, Dark, System	System
Language	Interface and article language	English, हिन्दी	English
Text size	Scales type across the site	Small 90%, Default 100%, Large 112%, X-Large 125%	Default
Restore section defaults	Resets accent, theme and text size	—	—

Contrast badges: **AAA** 7:1 or more, **AA** 4.5:1 or more, **AA Large** 3:1 or more, **Fail** below 3:1.

Comfort

Control	What it does	Values	Default
Reading mode	Distraction-free layout with comfortable typography (Alt + R)	On, off	Off
Reduce motion	Minimises animations and transitions (Alt + M)	On, off	Off
Reduce transparency	Turns off blur and translucency	On, off	Off
Boost contrast	Stronger text and borders	On, off	Off
Underline links	Always underlines links in articles and prose	On, off	Off
Custom cursor	The ring and dot that follow your pointer	On, off	On
Eye-rest reminders	Reminders to rest your eyes on a schedule	On, off	Off
Reminder interval	Minutes between reminders	20m, 35m, 45m, 60m	20m
Screen saver	Ambient colour screen after inactivity	On, off	Off
Start after	Minutes of inactivity before the screen saver	1m, 5m, 10m, 20m, 30m	10m

Control	What it does	Values	Default
Restore section defaults	Resets all Comfort settings	—	—

Highlights

Control	What it does	Values	Default
Live demo chips	Live / demo chips above demo sections	On, off	On
Welcome bar	Rotating welcome bar	Off; on (every page); homepage only	Homepage only
Announcement bar	Site announcements bar	Off; on (every page); homepage only	Homepage only
Quick links bar	Documentation, changelog, timeline, blog, learn cards	Off; on (every page); homepage only	Homepage only
Clock strip	Live clock, date and time zone above every page	On, off	Off
Hero notice	Notice banner on the homepage hero	On, off	On
Restore section defaults	Resets all Highlights settings	—	—

"Homepage only" shows the switch as on. Switching it on after it has been off shows the bar on every page.

Clock

Control	What it does	Values	Default
Live preview	The clock drawn with your settings, updating each second	Read-only	—
24-hour time	24-hour format instead of AM / PM (also used by the screen saver clock)	On, off	Off
Show seconds	Seconds on the live clock	On, off	On
Show date	Calendar date next to the clock	On, off	On
Timezone	Zone shown by the clock	Auto-detect or any listed zone	Auto-detect
Date format	How the date is written	Long, DD/MM/YYYY, MM/DD/YYYY	Long
Restore section defaults	Resets all Clock settings	—	—

Tooltips

Control	What it does	Values	Default
Live preview	Sample tooltip reflecting the switches	Read-only	—
Show tooltips	Rich hover and focus tooltips across the site	On, off	On
Detailed tooltips	Preview image, metadata and tags	On, off	On
Advanced tooltips	Data section always expanded; off means press Alt to expand	On, off	Off
Restore section defaults	Resets all Tooltips settings	—	—

Ads

Shown only while the site is showing ads. The controls are locked for signed-out and free-plan visitors.

Control	What it does	Values	Default
Show ads	Sponsored slots across the site	On, off	On
Ad density	In-content slots per page	Standard, Reduced	Standard
Ads in panels & search	Compact sponsored strip in kits, Spotlight and search results	On, off	On
Restore section defaults	Resets all Ads settings	—	—

Shortcuts

The Shortcuts section lists the panel's own keyboard shortcuts. It has no settings.

Keys	Action
Ctrl + ,	Open or close settings
Alt + R	Toggle reading mode
Alt + T	Switch theme (light, then dark, then system)
Alt + +	Increase text size
Alt + -	Decrease text size
Alt + 0	Reset text size
Alt + M	Toggle reduced motion
Esc	Close the dialog

The **Alt** shortcuts do nothing while you are typing in a text field. On a Mac, **Cmd** + **,** also opens the panel. The whole site's shortcuts are in [Keyboard shortcuts](#).

The settings file

Export writes a JSON file named `auric-settings.json`. It starts with two marker fields and then lists every setting:

```
{
  "_aa": "auric-settings",
  "v": 1,
  "accent": "sapphire",
  "savedColors": ["#2e8b57"],
  "themeMode": "system",
  "textScale": 1.12,
  "reduceMotion": false,
  "customCursor": true,
  "eyeRest": true,
  "eyeRestInterval": 35,
  "time24": true,
  "clockTz": "",
  "dateFormat": "dmy"
}
```

The example is shortened. A real export also includes the remaining switches: `reduceTransparency`, `contrast`, `underlineLinks`, `reading`, `screenSaver`, `screenSaverDelay`, `showWelcome`, `showAnnouncements`, `showQuickLinks`, `showTimeStrip`, `showHeroNotice`, `showDemoBadges`, `showSeconds`, `showDate`, `tipEnabled`, `tipDetails`, `tipAdvanced`, `adsEnabled`, `adsDensity` and `adsInPanels`, plus `recentColors`, an older colour history that is only read to fill Saved colors once.

Field	Accepted values
<code>accent</code>	A preset name (<code>gold</code> , <code>champagne</code> , <code>rose-gold</code> , <code>silver</code> , <code>platinum</code> , <code>bronze</code> , <code>copper</code> , <code>espresso</code> , <code>maroon</code> , <code>rose</code> , <code>emerald</code> , <code>sapphire</code> , <code>amethyst</code>) or a <code>#rrggbb</code> colour
<code>savedColors</code>	Up to 18 <code>#rrggbb</code> colours
<code>themeMode</code>	<code>light</code> , <code>dark</code> , <code>system</code>
<code>textScale</code>	<code>0.9</code> , <code>1</code> , <code>1.12</code> , <code>1.25</code>
<code>eyeRestInterval</code>	<code>20</code> , <code>35</code> , <code>45</code> , <code>60</code>
<code>screenSaverDelay</code>	<code>1</code> , <code>5</code> , <code>10</code> , <code>20</code> , <code>30</code>
<code>dateFormat</code>	<code>long</code> , <code>dmy</code> , <code>mdy</code>
<code>clockTz</code>	Empty for auto-detect, or a time zone name such as <code>Europe/London</code>
<code>showWelcome</code> , <code>showAnnouncements</code> , <code>showQuickLinks</code>	<code>true</code> , <code>false</code> or <code>"home"</code>
<code>adsDensity</code>	<code>standard</code> , <code>reduced</code>
Other switches	<code>true</code> or <code>false</code>

The preset names in the file are fixed identifiers: **espresso** is the **Brown** swatch, **rose** is **Pink**, and **platinum** is **Platinum Grey**. The language is not part of the file; it is kept separately (see [Language](#)).

Messages

Message	When it appears
Settings exported	After Export
Couldn't export settings	The browser refused the download
Settings imported	After a successful Import
That file isn't valid settings	The chosen file is not valid JSON
Couldn't read that file	The browser could not read the chosen file
Appearance / Comfort / Highlights / Clock restored to defaults	After that section's restore
Section restored to defaults	After the Tooltips or Ads restore
All settings reset to defaults	After a confirmed Reset all
Theme: Light / Dark / System	After Alt + T
Text size: Small / Default / Large / X-Large	After Alt + + , Alt + - or Alt + 0
Reduced motion on / Reduced motion off	After Alt + M

WEBSITE > SITE FEATURES > SETTINGS PANEL

Troubleshooting the Settings panel

Fixes for common problems with the Settings panel and the settings it controls.

My settings are gone

Why: settings are kept in this browser's local storage. They are lost when you clear site data or cookies for auricartisan.com, when you use a private or incognito window (which forgets everything when it closes), or when you open the site in a different browser or on another device.

What to do: set them again, or import a settings file you exported earlier (**Import** in the panel footer). Export a file now so you have a copy next time.

Ctrl + **,** does nothing

Why: the panel loads a moment after the page. A shortcut pressed while the page is still loading can be missed. Some browser extensions also claim **Ctrl** + **,**.

What to do: wait until the page has finished loading and try again, or open the panel from the page utilities bar at the bottom-left (**Settings**).

The Alt shortcuts do nothing

Why: **Alt + R**, **Alt + T**, **Alt + M**, **Alt + +**, **Alt + -** and **Alt + 0** are ignored while your cursor is in a text field, so they cannot interfere with typing. They are also ignored when **Ctrl** or **Cmd** is held.

What to do: click an empty part of the page first, then press the shortcut.

A change in one tab did not reach another tab

Why: other open tabs pick up a change when the browser tells them about it. This works in normal windows but not between a normal window and a private window, which keep separate storage.

What to do: reload the other tab.

My theme, accent or text size changed after I opened a link

Why: a page link copied from the site can carry the sender's appearance settings when they differ from the defaults (see [Shareable links](#)). Opening it applies those settings in your browser.

What to do: set them back in Appearance, or select **Restore section defaults**.

The Ads controls are greyed out

Why: ad preferences are a paid perk. For signed-out and free-plan visitors the controls are disabled, and selecting one shows an upgrade message.

What to do: nothing is broken. Upgrading unlocks the controls; every tool stays free either way.

I cannot find the Ads section

Why: the section appears only while the site is showing ads.

The Eyedropper button is missing

Why: it appears only in browsers that offer a screen colour picker to web pages, which at present means desktop Chromium-based browsers such as Chrome and Edge.

What to do: use the **Custom color** chip instead, or pick a colour with a colour tool on the site and paste its hex into your browser's picker.

The + button next to my custom colour is disabled

Why: either the colour is already in **Saved colors** (the button reads **Already saved**), or the palette already holds 18 colours.

What to do: remove a saved colour with the X on its swatch, then try again.

The Settings panel does not stay open when I move to another page

Why: the panel closes when you leave a page, even with the **Focus mode** button on.

What to do: press **Ctrl** + **,** on the new page. Your settings themselves carry over.

Import says "That file isn't valid settings"

Why: the file is not valid JSON, for example because it was edited by hand and a comma or bracket is missing, or because it is a different kind of file.

What to do: export a fresh file from a browser that has the settings you want, or fix the JSON. See [Reference](#) for the format.

After Reset all my saved colours are still there

Why: this is intended. Saved colours are a palette you built, so neither **Reset all** nor **Restore section defaults** removes them.

What to do: remove them one by one with the X on each swatch.

A bar I switched on shows on every page, not just the homepage

Why: the Welcome, Announcement and Quick links bars start in a "homepage only" state. Switching one off and on again shows it everywhere.

What to do: select **Restore section defaults** in Highlights to go back to homepage only.

[WEBSITE](#) > [SITE FEATURES](#) > [SETTINGS PANEL](#)

Settings panel FAQ

Short answers to common questions about the Settings panel.

Do I need an account to use Settings?

No. Every setting works signed out and is kept in this browser. The only exception is the Ads section, whose controls need a paid plan.

Do my settings follow me to another device?

Not automatically. Export them with **Export** and load the file on the other device with **Import**.

Does the accent colour change the colours inside the tools?

No. The accent recolours the site's interface: links, buttons, focus rings, tabs, kit launchers and tooltip borders. Colours you are working with in a tool, and colours shown in libraries, are not changed.

Why is the default gold darker in the light theme?

Plain gold on a near-white page has too little contrast to read comfortably, so the light theme uses a darker gold for the default accent. Colours you pick yourself are used as chosen. The **Accent accessibility** readout shows how your accent performs.

What is the difference between Restore section defaults and Reset all?

Restore section defaults resets only the section you are in. **Reset all** resets every section after asking you to confirm. Neither removes your saved colours.

Is language included in an exported settings file?

No. The language is kept separately. Choose it again on the new browser, or open any page with `?lang=hi` added to its address (see [Language](#)).

Can I open the panel on a specific section?

Yes, from a few places: the right-click menu's **Keyboard shortcuts** opens Shortcuts, the clock strip's **All settings** opens Clock, and an info bar's **Settings** opens Comfort.

Does Reduce motion affect the custom cursor?

No. The custom cursor follows your operating system's reduced-motion preference, not this switch. To remove it, switch off **Custom cursor** in Comfort.

Why does the panel look different on my phone?

On screens narrower than about 900 pixels, the section list becomes a strip across the top of the panel that you scroll sideways, and the control counts are hidden. All the same settings are there.

WEBSITE > SITE FEATURES > SETTINGS PANEL

Settings panel: supporting material

Contents of the Settings panel's supporting files: glossary, shortcuts, limits, related pages, privacy and release notes.

This folder holds the background material for the Settings panel: the terms it uses, its keyboard shortcuts, what its contrast readout measures, where to go next, what it stores, and when it changed.

File	What it covers
glossary.md	Terms used in the panel and its guides
shortcuts.md	Keyboard shortcuts that open the panel or change settings
limits-and-accuracy.md	What the accent contrast readout measures, and other limits
related.md	Related site features, kits and pages
privacy.md	What the panel stores and where
release-notes.md	User-facing history of the settings controls

WEBSITE > SITE FEATURES > SETTINGS PANEL

Settings panel shortcuts

Keyboard shortcuts that open the Settings panel, move around it, and change settings from anywhere on the site.

Anywhere on the site

Keys	Action
Ctrl + , (Cmd + , on a Mac)	Open or close the Settings panel
Alt + R	Turn reading mode on or off
Alt + T	Switch theme: Light, then Dark, then System
Alt + +	Make text one step larger
Alt + -	Make text one step smaller
Alt + 0	Return text to the default size
Alt + M	Turn reduced motion on or off

The **Alt** shortcuts are ignored while you type in a text field.

Inside the panel

Keys	Action
Left / Right arrow on the section list	Move to the previous or next section
Tab / Shift + Tab	Move between controls
Space or Enter on a switch or button	Change it
Esc	Close an open drop-down list first, then the panel
Esc in the Reset all confirmation	Cancel the reset
Tab in the Reset all confirmation	Stays inside the confirmation until you choose

For every shortcut on the site, see [Keyboard shortcuts](#).

WEBSITE > SITE FEATURES > SETTINGS PANEL

Settings panel glossary

Plain-language definitions of the terms used in the Settings panel.

Term	Meaning
Accent	The site's highlight colour for links, buttons, active tabs, focus rings, kit launchers and tooltip borders. Gold by default.
Contrast ratio	The WCAG measure of how different two colours are in lightness, from 1:1 (none) to 21:1 (black on white).
WCAG	The Web Content Accessibility Guidelines, the international standard for accessible web content.
AA, AAA	WCAG contrast levels for body text: AA needs 4.5:1, the stricter AAA needs 7:1.
AA Large	A contrast of at least 3:1, accepted by WCAG for large text and interface parts but not body text.
Eyedropper	A browser tool that lets you click any pixel on your screen to read its colour.
Hex colour	A colour written as # and six hexadecimal digits for red, green and blue, for example #D3AF37 .
Local storage	A small store inside your browser where a website keeps data on your device.
Modeless	A panel that does not block the page behind it. You can keep using the page while it is open.
Reading mode	A distraction-free layout with a narrow text column, larger type and no floating controls.
Saved colors	Your own palette of up to 18 accent colours, added only when you select the + button.
Section	One of the groups in the panel's list: Appearance, Comfort, Highlights, Clock, Tooltips, Ads, Shortcuts.
System theme	A theme setting that follows your device's light or dark preference and changes when it changes.
Toast	A short message that appears briefly to confirm an action, such as "Settings exported".
Tooltip	The small card that appears when you hover over or focus a control, explaining what it does.

WEBSITE > SITE FEATURES > SETTINGS PANEL

Limits and accuracy

What the accent contrast readout measures, how precise it is, and other limits of the Settings panel.

The accent contrast readout

- **Formula.** Both rows use the WCAG 2 relative-luminance contrast formula, and the badges use the WCAG 2 thresholds (7:1, 4.5:1, 3:1).
 - **Accent on background** compares your accent with the background colour of the page you are on, read from the page itself. On a page with a coloured or image background under a particular block, the real contrast in that block can differ.
 - **Text on accent** compares your accent with the text colour the site places on it. The site chooses between a very dark and a very light text colour, whichever gives more contrast.
 - **Precision.** Ratios are shown to two decimal places. Colours are treated as sRGB with no transparency.
 - The readout is a guide for choosing an accent, not a certified accessibility audit. For a full check of a page, use the Analyzer or the Contrast Checker tools.
-

The shade strip

The seven shades are three darker steps, your accent itself in the middle, and three lighter steps, made by mixing the accent towards black or towards white in sRGB. They are not a perceptual (OKLCH) ramp; use the site's shade and design tools for that.

Storage and scope

- Settings are kept per browser and per device. They are not synced to your account.
- A private window starts from the defaults and forgets its changes when it closes.
- Saved colors holds at most 18 colours.
- The language setting is kept separately from the other settings and is not in the exported file.

WEBSITE > SITE FEATURES > SETTINGS PANEL

Settings panel privacy

What the Settings panel stores, where, and what it sends over the network.

What stays on your device

- Every setting in the panel, including your saved colours, is kept in your browser's local storage for auricartisan.com.
- The panel's position and size are kept the same way.

- Nothing is sent to Auric Artisan when you change a setting. The settings work signed out and are not attached to an account.
- **Export** creates a file on your own device. It contains only your settings.

What uses the network

- Opening the **Ads** section checks your plan in the background, to decide whether the ad controls are unlocked. If you are signed in, this uses your existing session.
- Choosing **हिन्दी** downloads the Hindi dictionaries for the pages you visit (see [Language](#)).

Links can carry settings

If you copy a page link from the site, it can include your appearance settings that differ from the defaults (for example your accent and text size), so the person you send it to sees the page as you do. See [Shareable links](#) for what a link contains and how to share a clean one.

Removing your settings

- **Reset all** in the panel returns everything to the defaults (saved colours are kept until you remove them).
- Clearing site data for auricartisan.com in your browser removes all stored settings.

The site's full policies are on <https://auricartisan.com/legal/privacy/> and <https://auricartisan.com/legal/cookies/>.

[WEBSITE](#) > [SITE FEATURES](#) > [SETTINGS PANEL](#)

Settings panel release notes

User-facing history of the Settings panel, taken from the public changelog.

The site's changelog at <https://auricartisan.com/library/changelog/> records releases. Entries that concern the settings controls:

Date	Release	Change
2026-06-05	v0.9.9	Added user settings controls, alongside guide content, PWA app support and the UX Kit.
2026-05-02	v0.9.8	Added complexity management, which lets you control how many advanced tools the site shows (through the Advanced Kit).

The panel as documented here (seven sections, saved colours, the accent contrast readout, the Custom cursor switch, the Highlights section and the panel's right-click menu) reflects the site as of September 2026. Later changes appear in the changelog.

[WEBSITE](#) > [SITE FEATURES](#) > [SETTINGS PANEL](#)

Related to the Settings panel

Site features, kits and tools that work with the Settings panel.

Features the panel controls

- **Theme** — light, dark and system themes and every other way to switch them.
 - **Language** — English and Hindi.
 - **Eye rest** — the reminders scheduled in Comfort.
 - **Screen saver** — the idle screen scheduled in Comfort.
 - **Custom cursor** — the pointer switched in Comfort.
 - **Info bars and notices** — the bars, notices, chips and clock strip switched in Highlights.
 - **Accessibility aids** — reading mode and the other comfort settings, alongside the site's other aids.
-

Other ways in

- **Context menu** — **Site** > **Settings** and **Keyboard shortcuts**.
 - **Search and Spotlight** — the  command **Open settings**.
 - **Header and navigation** — the page utilities bar and the mobile drawer's theme and language switches.
 - **Kits** — the floating kits share the panel's title-bar controls and follow your accent colour.
-

Tools for checking colour properly

- **Contrast Checker** — check any two colours.
- **Analyzer** — audit a whole page.

Shareable links

What the address bar remembers about the page you are on, how to share an exact view, and the other link options the site understands.

As you use a page on auricartisan.com, the site quietly keeps the page's state in the address bar, after `#p=`: how far you have scrolled, what you have typed or chosen in the page's fields, which tabs and toggles are selected, which panels are open, and your appearance settings where they differ from the defaults. Reload the page and it comes back as you left it. Copy the address and send it, and the other person sees the same view.

The site also understands a few other additions to an address: `?lang=hi` opens a page in Hindi, `?color=` opens a colour inspector over any page, and `#split=` restores a split view.

Who it is for

- Anyone who wants a reload to keep their place and their inputs.
- People sharing a specific tool setup, a scroll position in a long article or a filled-in form.
- Teachers and support staff pointing someone to an exact view.

Where to find it

It works on its own on every page. To copy the current address, use your browser's address bar, **Copy link** in the navigation dock, or **Copy URL** in the right-click menu.

Quick start

1. Open a tool, for example <https://auricartisan.com/tool/basic-tools/>, and change a few inputs.
2. Scroll down a little. After a moment the address gains a `#p=` part.
3. Reload the page. Your inputs and scroll position come back.
4. Point at the navigation dock and select **Copy link**.
5. Paste the link into a message. Whoever opens it sees the same inputs and position.

What you can do

- Keep your place and inputs through a reload.
- Share an exact view of a page.
- Open any page in Hindi or English with `?lang=`.
- Inspect any colour over any page with `?color=`.
- Share a split view with `#split=`.

WEBSITE > SITE FEATURES > SHAREABLE LINKS

Get started with shareable links

How the page keeps its state in the address, how that state is restored, and how to share or clear it.

What happens as you work

On every page, about a third of a second after you scroll, type or change a control, the site updates the address in your browser's address bar. It adds `#p=` followed by a short code that describes the page's state. For example:

```
https://auricartisan.com/tool/basic-tools/#p=eyJ2IjoxLCJ5IjoxNjkwLCJ4IjowfQ
```

The code is not secret or encrypted: it is the page's state written compactly. The update replaces the current address rather than adding a new entry, so it does not fill your Back button with steps.

When you are at the top of the page and have changed nothing, the address stays clean, with no `#p=`.

What comes back when you open the address

When you reload the page or open the address later, the site restores the state in this order:

1. Panels that were open (the Settings panel and the Feature, Menu, Advanced and Status Kits) open again.
2. Tool-specific state is applied, on tools that save their own.
3. Field values are put back, and the page recalculates as if you had typed them.
4. Selected tabs and toggles are selected again.
5. The page scrolls back to where you were.

Some parts of a page load late, such as kits and tool panels; the site keeps trying for a few seconds until they are ready.

Share an exact view

1. Set up the page the way you want to show it.
2. Copy the address: select **Copy link** in the navigation dock, choose **Copy URL** in the right-click menu's quick bar, or copy it from the address bar.
3. Send it.

The person who opens it sees the same page, inputs, tabs, open panels and scroll position.

Important: The link also carries your appearance settings that differ from the defaults, such as accent colour, theme mode and text size, and applies them in the other person's browser. It carries whatever you typed into the page's fields, apart from passwords and search boxes. Check the view before you share it.

Share a clean link

To share just the page:

- scroll to the very top and undo any changes before copying; or
- delete everything from `#p=` onwards in the copied address.

Pages that use their own

Some pages keep their own information after `#`, for example a section link such as `#about-intro`, the Vision Simulation tool's shareable state, or a shared library item. On those pages the site does not add `#p=`, so it never overwrites them.

WEBSITE > SITE FEATURES > SHAREABLE LINKS

Other link options

Add `?lang=`, `?color=` or `#split=` to an address to open a page in a language, inspect a colour, or restore a split view.

Open a page in Hindi or English: `?lang=`

Add `?lang=hi` to any page address to open it in Hindi, or `?lang=en` for English. The browser that opens the link remembers the choice for later visits.

```
https://auricartisan.com/library/learn/?lang=hi
```

If the address already contains `?`, use `&lang=hi`. See [Language](#).

Inspect a colour over any page: `?color=`

Add `?color=` and a colour to any page address, and a floating colour inspector opens over that page with a full reading of the colour.

```
https://auricartisan.com/?color=CEA1B5
https://auricartisan.com/library/palette/?colour=%23d3af37&on=ffffff
```

- **Parameter names:** `color`, `colour` or `hex` for the colour; `on`, `bg`, `against` or `vs` for a background to compare it with.
- **Colour formats:** hex with or without `#` (3, 4, 6 or 8 digits; `#` must be written `%23` in an address), a CSS colour name such as `rebeccapurple`, or a CSS colour function such as `oklch(...)`, `lab(...)` or `rgb(...)`.
- **Short or partial hex** still works: `?color=CEA` is read as a colour.
- **Several colours:** separate them with `|` or `;` (or `,` when no colour function is used).
- The inspector reports contrast against the page it opens on unless you give a background with `on=`.

The inspector itself is part of the colour tools; see [Basic colour tools](#).

Restore a split view: `#split=`

While split view is open, the address holds `#split=` and a description of both panes. Opening that address restores the split. See [Split view](#) › [Share a split](#).

Search: `/search/?q=`

The full search page accepts a query in its address, for example `https://auricartisan.com/search/?q=gamut`. Spotlight's **View all results** uses it. See [Search](#).

WEBSITE > SITE FEATURES > SHAREABLE LINKS

Shareable links reference

Exactly what is and is not saved in a page's address, and how it is restored.

Saved after `#p=`

Item	Detail
Scroll position	Vertical and horizontal; not saved when within 4 pixels of the top-left

Item	Detail
Text, number and other input fields	Their values, in the page's main content and in the Settings panel
Drop-down lists and text areas	Their values
Checkboxes and radio buttons	On or off
Tabs, toggles and pressed buttons	Which are selected
Editable text areas	Their text
Open panels	Settings panel, Feature Kit, Menu Kit, Advanced Kit, Status Kit
Appearance settings	Only those that differ from their defaults: accent, theme mode, text size, comfort switches, eye rest, screen saver, clock format, seconds, date and date format
Tool state	On tools that save their own extra state

Only controls that have an identity on the page (an id or a name) can be saved.

Not saved

Item	Why
Passwords	Never recorded
File choosers	Files cannot be put in a link
Search boxes	Excluded
Hidden fields and buttons	Not user input
Disabled controls	Not in use
Areas a page marks as private	Excluded by the page
Controls outside the main content (other than Settings)	Out of scope
Language	Use <code>?lang=</code> instead

Timing and size

Behaviour	Value
Update delay	About 0.34 seconds after a change
History	Replaces the current entry; adds no Back steps
Maximum length	About 3,600 characters; beyond that only scroll position and open panels are kept

Behaviour	Value
Restore retries	For a few seconds, for parts that load late

When it does not write

- When the address already has another `#` part (a section anchor, the Vision Simulation state, a shared library item). The site still restores its own `#p=` if present.
- On pages that turn the feature off.
- Inside split view panes, each pane keeps its own state, which is included in the `#split=` address.

Other parameters

Parameter	Effect
<code>?lang=hi</code> / <code>?lang=en</code>	Opens the page in Hindi or English and remembers it
<code>?color=</code> , <code>?colour=</code> , <code>?hex=</code>	Opens the colour inspector with that colour
<code>on=</code> , <code>bg=</code> , <code>against=</code> , <code>vs=</code>	Background colour for the inspector
<code>#split=</code>	Restores split view
<code>/search/?q=</code>	Opens the search page with a query

WEBSITE > SITE FEATURES > SHAREABLE LINKS

Troubleshooting shareable links

Fixes for common problems with page links and their saved state.

The link opened but my inputs were not restored

Possible causes and fixes:

- The field has no identity on the page, so it cannot be saved. Nothing can be done from your side.
- It was a password, file or search field, which are never saved.
- The state was too long (over about 3,600 characters), so only the scroll position and open panels were kept.
- The page uses its own `#` part, so no `#p=` was added. Use the tool's own sharing option if it has one.
- The page had not finished loading when the link was copied. Wait a moment after your last change before copying.

Opening a link changed my theme, accent or text size

Why: the link carried the sender's appearance settings that differ from the defaults.

What to do: change them back in Settings, or use **Restore section defaults** in Appearance.

A panel opened by itself when I loaded a page

Why: the address had a `#p=` part recorded while that panel was open.

What to do: close the panel. The address updates and it will not reopen.

The address changes as I scroll

That is the page saving your position. It does not add steps to your Back button.

I want a link without the extra part

Scroll to the top and undo your changes before copying, or delete everything from `#p=` onwards.

`?color=` did not open the inspector

Why: the value is not a colour the site can read, or the `#` was not written as `%23`.

What to do: write the hex without `#` (`?color=d3af37`) or as `%23d3af37`.

WEBSITE > SITE FEATURES > SHAREABLE LINKS

Shareable links FAQ

Short answers about page links and their saved state.

Is the `#p=` part sent to Auric Artisan?

No. Browsers do not send the part of an address after `#` to the website. It is read by the page in the browser that opens it.

Is it encrypted?

No. It is the page's state written compactly. Anyone who has the link can read what it contains.

Can I turn it off?

There is no switch for it. It only affects the address; it does not store anything elsewhere. Share a clean link if you prefer.

Does it work offline?

Yes, for pages that are saved on your device: reloading restores the state without a connection.

Does it include what I saved in my library?

No. It includes what is on the page, not your saved library items.

WEBSITE > SITE FEATURES > SHAREABLE LINKS

Shareable links glossary

Terms used in the shareable links guides.

Term	Meaning
Address (URL)	The web address shown in the browser's address bar.
Fragment	The part of an address after <code>#</code> . Browsers keep it on your device and do not send it to the site.
Query parameter	A part of an address after <code>?</code> , such as <code>?lang=hi</code> , which the page reads.
Page state	The scroll position, inputs, selections and open panels of a page.
<code>#p=</code>	The fragment in which the site keeps a page's state.
Restore	Putting a page back into the state its address describes.
Clean link	An address without the <code>#p=</code> part.

WEBSITE > SITE FEATURES > SHAREABLE LINKS

Shareable links privacy

What a copied page link can reveal, and how to share one safely.

- **Stays in the address.** The page state is kept only in the address bar of your browser tab. It is not stored elsewhere and, because it follows `#`, it is not sent to Auric Artisan when the page loads.
- **Travels with the link.** When you copy and share the address, the state goes with it: what you typed into the page's fields (except passwords and search boxes), your selections, open panels, your scroll position, and your appearance settings that differ from the defaults.
- **Readable by anyone with the link.** The state is written compactly, not encrypted.
- **Browser history.** The latest state of each page can appear in your browser history and bookmarks, like any address.

To share safely, share a clean link: scroll to the top and undo changes, or delete everything from `#p=` onwards.

WEBSITE > SITE FEATURES > SHAREABLE LINKS

Related to shareable links

Features that copy, share or read page links.

- **Navigation dock** — **Copy link** and **Share**.
- **Context menu** — **Copy page URL**, **Copy as Markdown link** and **Share page....**
- **Split view** — `#split=` addresses.
- **Language** — `?lang=`.
- **Settings panel** — the appearance settings a link can carry.
- **Basic colour tools** — the colour inspector opened by `?color=`.

WEBSITE > SITE FEATURES > SPLIT VIEW

Split view

Show two pages of Auric Artisan side by side, each fully working and responsive, with per-pane theme, viewport and zoom.

Split view shows two pages side by side (or one above the other) in the same browser tab. The left pane, the **live** pane, is a working copy of the page you were on, scrolled to where you were. The right pane, the **companion**, can show any other page: a tool next to its documentation, two palettes, or the same page in light and dark. Both panes are complete, working pages, and each one behaves like a real window: make a pane narrow and the page inside it switches to its phone layout.

Each pane has its own Back, Forward, Reload and address bar, and its own theme, device width and zoom. A toolbar across the top lets you change the layout, swap the panes, overlay them in **Compare** mode to see differences, sync their scrolling, send links from one pane to the other, and watch live performance numbers. The address of the page changes as you work, so you can copy it and share the exact split.

Your original page keeps running untouched behind split view. When you close it, you are back where you were, or on the page the live pane moved to.

Who it is for

- Designers checking a page or palette in light and dark, or at desktop and phone width, at the same time.
- Developers comparing two versions of a page.
- Learners reading an article next to the tool it describes.

Where to find it

- Press **Ctrl** + **Shift** + **D** on any page.
- Select **Open split view** in the navigation dock.
- Right-click the page and choose **View**, then **Split view**.
- Hold **Alt** and click a link to another page on the site: split view opens with that page in the companion pane.

Quick start

1. Open <https://auricartisan.com/tool/basic-tools/> and press **Ctrl** + **Shift** + **D**.
2. The live pane shows Basic Tools; the companion shows your last companion page or the homepage.
3. Select the companion's address bar, type **docs**, and choose **Documentation** from the list.
4. Open the companion's **More** menu (three dots) and select **Theme** until it reads dark.
5. Drag the divider between the panes to give the tool more room. A badge shows the split, for example "62 | 38".
6. Press **Alt** + **V** to stack the panes, and **Alt** + **V** again to put them side by side.

7. Press **Esc** to close split view.

What you can do

- Show two site pages at once, each fully interactive and responsive.
 - Give each pane its own theme, device width (desktop, tablet, phone) and zoom.
 - Stack or place panes side by side, swap them, resize them, maximise one.
 - Compare two panes visually, with differences highlighted.
 - Sync scrolling, mirror the live page into the companion, and route links into the companion.
 - Watch frame rate, CPU and memory while you work.
 - Share the whole split as a link.

WEBSITE > SITE FEATURES > SPLIT VIEW

Get started with split view

Open split view, learn its toolbar, and close it again.

Open split view

How	What opens
Ctrl + Shift + D	Live pane: this page. Companion: your last companion page, or the homepage
Navigation dock › Open split view	The same
Right-click › View › Split view	The same
Alt + click a link to another site page	Live pane: this page. Companion: the page the link points to

The first time, split view takes a moment to load. The live pane opens scrolled to where you were on the page.

The screen

Split view covers the whole window:

- **Toolbar** across the top, in three groups:
 - the live pane's controls (its tab, **Back**, **Forward**, **Reload**, address bar and **More** menu);
 - the companion pane's controls (the same set);

- the global controls: the performance chip, **Toggle layout**, **Swap panes**, **Compare**, **Mirror**, **Route links**, **Scroll sync**, **Equal split** and **Close**.
- **Two panes** below it, with a **divider** between them that you can drag.

On windows narrower than about 900 pixels, the toolbar wraps: each pane's controls take a full row.

Your original page stays behind split view and keeps running; nothing on it is changed.

Close split view

- Press **Esc** (if a pane's More menu is open, the first **Esc** closes the menu; if you are editing an address bar, the first **Esc** puts back the address).
- Or select **Close** at the right end of the toolbar.
- Or press **Ctrl** + **Shift** + **D** again.

When split view closes:

- if the live pane is still on the page you started from, you return to that page, scrolled to where the live pane was;
- if you moved the live pane to another page, the browser goes to that page.

Next steps

- [Panes and their controls](#)
- [Layout, compare and sync](#)

WEBSITE > SITE FEATURES > SPLIT VIEW

Layout, compare and sync

Change the split layout, resize and swap panes, compare pages visually, sync scrolling, route links and watch performance.

These are the global controls at the right of the split view toolbar.

Side by side or stacked

Select **Toggle layout** or press **Alt** + **V** to switch between panes side by side and panes one above the other.

Resize the panes

- Drag the **divider** between the panes. A badge follows the pointer showing the split as two percentages, for example "62 | 38".

- The divider snaps when you pass near 25%, 33%, 50%, 66% or 75%.
- A pane cannot be made smaller than 80 pixels.
- Double-click the divider, select **Equal split**, or press **Alt** + **E** to return to 50 | 50.

The sizes you choose are remembered separately for side-by-side and stacked layouts.

Swap the panes

Select **Swap panes** or press **Alt** + **S**. The panes trade places; both pages keep running, with nothing reloaded.

Maximise one pane

Use **Maximize** in a pane's More menu to give it the whole area, and select it again to restore.

Compare two pages

Compare overlays the two panes and highlights what differs:

1. Load the two pages you want to compare, for example the same page with one pane in light theme and the other in dark, or two palettes.
2. Select **Compare**.
3. A note appears: "Compare mode — matching areas go dark, differences light up. Scroll is synced."

Areas where the two pages are identical turn black; anything different shows in colour. Scroll sync is switched on while comparing, and returns to your previous choice when you leave. Select **Compare** again to leave.

Mirror

Mirror loads the live pane's page into the companion, so you can show the same page twice, for example at two widths or in two themes.

Route links

When **Route links** is on (highlighted), links you click in the live pane open in the companion pane instead, so the live pane stays put. Whether it is on or off, holding **Alt** while clicking a link in either pane opens it in the other pane.

Scroll sync

When **Scroll sync** is on (highlighted), scrolling one pane scrolls the other to the same relative position (for example, halfway down both pages).

Performance chip

The first global control shows the frame rate, for example "58 fps", with a coloured health dot.

- Point at it (or focus it) to see the **Performance** panel: **FPS**, **Frame time**, **CPU busy (long tasks)**, **Event-loop lag**, **JS heap (RAM)** where the browser reports it, **DOM nodes · live** and **DOM nodes · pane 2**.
- Click it to pin the panel open; click again to unpin.

Eco mode

Two full pages at once can be heavy. When readings stay poor for a few seconds (frame rate below 32, CPU busy above 65%, or lag above 400 milliseconds), split view switches both panes, and the page behind, to the site's low-performance mode, which turns off decorative effects. The panel then reads "Eco mode active — panes switched to the low performance tier until readings recover." When readings stay good for a few seconds, normal mode returns. Otherwise it reads "Optimizer on standby — kicks in automatically when FPS drops or lag builds up."

WEBSITE > SITE FEATURES > SPLIT VIEW

Panes and their controls

Use each pane's tab, history buttons, address bar and More menu for theme, viewport, zoom, focus and more.

Each pane has the same row of controls in the toolbar.

The pane tab

The tab at the start of each row names the pane: by default the page's own title (for example "Basic Tools"). A dot shows its state: amber and pulsing while the page loads, green when it is ready.

Rename a pane: double-click its tab, type a name and press **Enter** (or click elsewhere). Press **Esc** to cancel. An empty name returns to the page title. Your name stays on the pane while you browse in it, until you close split view.

Back, Forward and Reload

Each pane has its own history. **Back** and **Forward** move through the pages that pane has shown; **Reload** reloads just that pane.

The address bar

Each pane has an address bar showing its page's address on the site, for example **/library/palette/**.

To load another page:

1. Select the address bar. A list of destinations opens, grouped under **Home**, **Tools**, **Libraries**, **Account**, **Company**, **Legal** and your **Recent** pages.
2. Type to narrow the list: page names, addresses and keywords all match (for example **ok1ch** finds the Colour Science Lab).
3. Use **Up** and **Down** to choose and **Enter** to load, or click an entry.

You can also type an address that is not in the list: a site path such as **/tool/icon/** (the list offers **Go to** that path) or a full **https://** address (**Open external URL**). Press **Ctrl** + **Enter** to open the typed address in a new browser tab instead. Press **Esc** to close the list, and again to put back the current address.

Loading a new page in the **live** pane means closing split view will take you to that page. The companion's address bar tooltip reads "Edit the companion pane's URL and press Enter to load it."

Pages you load are added to **Recent** (up to 10 site pages), and split view uses your most recent companion page the next time it opens.

The More menu

Select the three dots (**More pane controls**) at the end of a pane's row:

Control	What it does
Theme	Cycles Auto , Light and Dark for this pane only. Light and dark apply instantly.
Viewport	Cycles desktop (full pane width), tablet (820 pixels) and phone (400 pixels). The page inside reflows to that width.
Zoom	Cycles 100% , 125% , 150% and 75% for this pane.
Focus this pane	Moves keyboard focus into the pane and outlines it (Alt + 1 for live, Alt + 2 for companion). Select again to clear.
Maximize	Gives this pane the whole area. Select again to restore.
Open in new tab	Opens this pane's page in a new browser tab.
Copy URL	Copies this pane's page address, without the split details.

Controls that differ from their default (a forced theme, a device width, a zoom other than 100%) are highlighted. The menu stays open while you cycle theme or zoom; click elsewhere or press **Esc** to close it.

Your own site theme setting is not changed by a pane's theme. When you switch a pane back to **Auto**, it reloads to follow your site theme again.

Keyboard inside a pane

Keyboard shortcuts pressed inside a pane (such as **Esc**, **Alt** + **S** or **Ctrl** + **Shift** + **D**) still reach split view.

WEBSITE > SITE FEATURES > SPLIT VIEW

Share a split

Copy the address of a split view and reopen it, with both pages, the layout and each pane's settings.

While split view is open, the browser's address bar keeps a description of the split after `#split=`. It records:

- the live pane's page and the companion pane's page, including where each is scrolled and what you entered on them;
- side-by-side or stacked layout;
- the divider position;
- each pane's theme, viewport and zoom;
- whether the panes are swapped.

Share or bookmark a split

1. Set up split view the way you want it.
2. Copy the address from your browser's address bar (or bookmark it).
3. Open the address later, or send it to someone.

Result: the page opens straight into split view, with both panes, the layout and the pane settings restored.

Things to know

- The address updates as you work, including as you scroll either pane.
- Pane names you typed are not part of the address.
- Closing split view removes the split details from the address.
- **Copy URL** in a pane's More menu copies only that pane's page, without the split.
- A shared split contains the addresses of both pages and the values entered on them. Check it before sending it to someone.

WEBSITE > SITE FEATURES > SPLIT VIEW

Scroll sync	Scroll sync	Mirror scrolling between panes	—
Equal split	Equal split	Reset to 50 / 50	Alt + E
Close	Close	Exit split view	Esc

Divider

Behaviour	Value
Snap points	25%, 33%, 50%, 66%, 75%
Minimum pane size	80 pixels
Double-click	Equal split
Remembered	Separately for side-by-side and stacked

Keyboard

Keys	Action
Ctrl + Shift + D	Open or close split view
Esc	Close a More menu; else close split view
Alt + 1 / Alt + 2	Focus the live / companion pane
Alt + V	Toggle layout
Alt + S	Swap panes
Alt + E	Equal split
Alt + click a link	Open it in the other pane (or open split view with it)

Alt + **V**, **Alt** + **S** and **Alt** + **E** are ignored while you type in an address bar.

Performance panel

Reading	Meaning
FPS	Frames drawn per second
Frame time	Milliseconds per frame
CPU busy (long tasks)	Share of the last second spent on long tasks
Event-loop lag	Delay before the page can respond, in milliseconds
JS heap (RAM)	Memory used by page scripts, where the browser reports it
DOM nodes · live / · pane 2	Number of page elements in each pane

Recent destinations

Up to 10 site pages, most recent first.

WEBSITE > SITE FEATURES > SPLIT VIEW

Troubleshooting split view

Fixes for common split view problems.

Ctrl + Shift + D does nothing, or bookmarks the page

Why: in some browsers **Ctrl + Shift + D** also means "bookmark all tabs". Split view claims the shortcut once the page has loaded; pressed too early, the browser may act on it instead.

What to do: wait for the page to finish loading, or use **Open split view** in the navigation dock.

An outside website shows as a blank pane

Why: many websites do not allow themselves to be shown inside another page. External pages that do load are not controlled by split view, so the pane's theme, zoom and history buttons may not affect them.

What to do: use **Open in new tab** from the pane's More menu.

A pane is slow or the page stutters

Why: two full pages are running at once.

What to do: let eco mode switch on, close heavy tools in one pane, or use a smaller viewport. The performance chip shows what is happening.

Closing split view took me to a different page

Why: you loaded another page in the live pane. Closing follows the live pane.

What to do: use your browser's Back button to return.

The Theme control shows Auto but the pane is not following my theme

Why: switching a pane back to **Auto** reloads it. If the reload has not finished, wait a moment.

Compare shows everything in colour

Why: the two pages differ everywhere, for example because they are scrolled to different places or use different themes on purpose.

What to do: load the same page in both panes (**Mirror**), then change one thing, such as the theme, to see just that difference.

A shared split opened as a normal page

Why: the link lost the part after `#split=`, for example because an app shortened it.

What to do: copy the full address again from the address bar.

WEBSITE > SITE FEATURES > SPLIT VIEW

Split view FAQ

Short answers about split view.

Is the live pane a screenshot?

No. It is the real page, fully working, in its own window area. You can click, type and scroll in it.

Does split view change my page?

No. Your original page keeps running untouched behind split view.

Can I see a page at phone width?

Yes. Set the pane's **Viewport** to phone (400 pixels) in its More menu. The page reflows as it would on a phone.

Can I compare light and dark?

Yes. Use **Mirror** so both panes show the same page, then set one pane's **Theme** to Light and the other to Dark. **Compare** then highlights every difference.

Can I have more than two panes?

No. Split view shows two panes.

Does split view work on a phone?

It opens, but two pages on a small screen are cramped. It is designed for larger windows.

Split view shortcuts

Keyboard shortcuts for split view.

Keys	Action
Ctrl + Shift + D	Open or close split view
Esc	Close an open More menu; otherwise close split view
Alt + 1	Focus the live pane
Alt + 2	Focus the companion pane
Alt + V	Side by side or stacked
Alt + S	Swap panes
Alt + E	Equal split
Alt + click on a link	Open the link in the other pane; with split view closed, open split view with it
Enter in an address bar	Load the address or highlighted destination
Ctrl + Enter in an address bar	Open the typed address in a new browser tab
Esc in an address bar	Close the destination list, then restore the address

See [Keyboard shortcuts](#) for the whole site.

WEBSITE > SITE FEATURES > SPLIT VIEW

Split view glossary

Terms used in the split view guides.

Term	Meaning
Live pane	The pane that starts with the page you were on. Closing split view follows it.
Companion pane	The second pane, for any other page.
Divider	The bar between the panes that you drag to resize them.
Viewport	The width a pane's page is laid out for: desktop, tablet (820 px) or phone (400 px).
Responsive	A page that rearranges itself to fit the width it is given.
Compare mode	An overlay of both panes in which identical areas turn black and differences show.
Route links	A mode in which links clicked in the live pane open in the companion.
Scroll sync	Scrolling one pane scrolls the other to the same relative position.
Eco mode	Automatic low-performance mode that turns off decorative effects when the panes run slowly.
FPS	Frames per second: how smoothly the screen is updating.

WEBSITE > SITE FEATURES > SPLIT VIEW

Split view privacy

What split view stores and what it writes into the page address.

- **Stored in your browser:** your recent pane destinations (up to 10 site pages) and the divider sizes.
- **In the address bar:** while open, the address describes both panes, including each page's remembered state (scroll position and values entered). Anyone you send the address to sees those pages and values.
- **Not sent anywhere:** split view runs entirely in your browser. Opening an external address in a pane loads that website directly, as a normal visit would.
- **Performance readings** are measured in your browser and shown only to you.

WEBSITE > SITE FEATURES > SPLIT VIEW

Split view release notes

User-facing history of split view, from the public changelog.

Date	Release	Change
2026-04-19	v0.9.75	Fixed split-screen issues with the address, refresh, resizing, embedded content and window close.

Split view as documented here, with a live mirror pane and a companion pane, named pane tabs, the More menu, Compare mode, performance readings and shareable split addresses, reflects the site as of September 2026. See <https://auricartisan.com/library/changelog/> for later changes.

WEBSITE > SITE FEATURES > THEME

Theme

The site's light, dark and system themes, and every place you can switch between them.

Auric Artisan has a **light** theme and a **dark** theme. A third choice, **System** (called **Auto** in the mobile drawer), follows your device: when your operating system switches between light and dark, the site switches with it, even on a page that is already open. System is the default.

You can change the theme from several places: the sun and moon button in the header, the Settings panel, the mobile drawer, a keyboard shortcut, the right-click menu, Spotlight's commands and the card menu. They all change the same setting, which applies to every page in this browser and to every open tab. The site also applies your theme before the page is drawn, so a page does not flash the wrong theme as it loads.

Some panels can override the theme for themselves: each kit has its own light and dark button, and each pane of split view can be forced light or dark. These do not change the site's theme.

Who it is for

Everyone. Dark suits low light and long sessions; light suits bright rooms, printing and checking colours against white. When you compare colours or contrast, it can help to check them in both.

Where to find it

- The sun or moon button at the right of the header.
- **Settings** > **Appearance** > **Theme** (**Ctrl** + **,**).
- The mobile drawer > **Preferences** > **Theme**.
- **Alt** + **T** anywhere on the site.

Quick start

1. Select the moon in the header. The page turns dark and the button now shows a sun.
2. Select the sun. The page turns light.
3. Press **Alt** + **T** three times and watch the message: "Theme: Light", "Theme: Dark", "Theme: System" (the order depends on where you start).
4. Open Settings with **Ctrl** + **,** and select **System** under **Theme**.
5. Change your device between light and dark mode. The page follows.

What you can do

- Choose Light, Dark or System.
- Switch quickly from the header, the keyboard, the right-click menu, Spotlight or the card menu.

- Keep a kit, or a split-view pane, in a different theme from the page.

WEBSITE > SITE FEATURES > THEME

Get started with themes

Understand the light, dark and system theme modes and choose one.

The three modes

Mode	What you see
Light	Light pages with dark text, always
Dark	Dark pages with light text, always
System (Auto in the drawer)	Light or dark to match your device's setting, changing when it changes

System is the default for a new visitor.

Choose a mode

1. Press **Ctrl** +  to open Settings. **Appearance** is selected.
2. Under **Theme**, select **Light**, **Dark** or **System**.

The page changes at once, and every other page and open tab follows.

How System mode follows your device

With **System** selected, the site asks your browser whether your device is set to dark mode, and uses dark if it is. When the device switches (for example on a schedule at sunset), the site switches too, without a reload.

Where to change your device's setting:

- **Windows:** Settings › Personalisation › Colours › Choose your mode.
 - **macOS:** System Settings › Appearance.
 - **Android:** Settings › Display › Dark theme.
 - **iOS and iPadOS:** Settings › Display & Brightness.
-

What the header button does to System mode

The header's sun and moon button always switches to the opposite of what you see now, and makes that choice fixed. If you were on **System** and the page was dark, selecting the sun sets the theme to **Light**, and the Settings panel moves from **System** to **Light**. To follow your device again, choose **System** in Settings or **Auto** in the drawer.

What changes with the theme

- The page background, text, borders and panels.
- The default gold accent is drawn slightly darker in the light theme to stay readable. A custom accent is not changed.

Tool results, images and colour swatches are not recoloured.

WEBSITE › SITE FEATURES › THEME

Every way to switch the theme

All the places you can change the theme, and how each one behaves.

All of these change the same site-wide setting, except the last two, which affect only one panel.

Header button

The sun or moon at the right of the header (tooltip **Theme:** "Switch between light and dark mode").

- It shows a **moon** while the page is light (select it to go dark) and a **sun** while the page is dark.
 - It always switches to the opposite of what you see, and fixes that choice (it leaves System mode).
-

Settings panel

Settings (**Ctrl** + **,**) › **Appearance** › **Theme:** **Light**, **Dark**, **System**. This is the only place, with the drawer, that can set **System**.

Mobile drawer

On narrow screens, open the drawer and use **Preferences** > **Theme: Auto, Light, Dark**. **Auto** is the same as **System**. The highlighted button shows your current choice.

Keyboard

Alt + **T** anywhere on the site (not while typing in a field) moves one step through **Light, Dark** and **System**, in that order, and shows a message such as "Theme: Dark".

Right-click menu

Right-click the page, open **View**, and choose **Switch theme**. The row shows the current theme (**Light** or **Dark**). It works like the header button. You can pin it to the quick bar with its star, and filter for it by typing **dark** or **light**.

Spotlight command

Press **Ctrl** + **K**, type **>**, and choose **Toggle light and dark**. The row shows the current theme. It works like the header button.

Card menu

On pages with card grids, right-click a card and select the **Theme** pill under **System**. It works like the header button.

A kit's own theme button

Each kit has a sun or moon button in its title bar, labelled for example "Switch Status Kit to light mode". It changes the theme of **that kit only** and is remembered for it. Until you use it, a kit follows the site theme. See [Kits](#).

A split-view pane

In split view, each pane has a **Theme** control in its **More** menu that cycles **Auto, Light** and **Dark** for that pane only, so you can compare the two themes side by side. It does not change your setting. See [Split view](#).

WEBSITE > SITE FEATURES > THEME

Theme reference

Every theme control, the values it sets, and how the controls interact.

Controls

Control	Values	Sets System?	Scope
Header sun/moon button	Toggles light and dark	No (fixes the opposite of what you see)	Whole site
Settings › Appearance › Theme	Light, Dark, System	Yes	Whole site
Drawer › Preferences › Theme	Auto, Light, Dark	Yes (Auto)	Whole site
Alt + T	Light → Dark → System → Light	Yes	Whole site
Right-click › View › Switch theme	Toggles light and dark	No	Whole site
Spotlight › Toggle light and dark	Toggles light and dark	No	Whole site
Card menu › System › Theme	Toggles light and dark	No	Whole site
Kit title-bar theme button	Light, dark	—	That kit only
Split-view pane › Theme	Auto, Light, Dark	—	That pane only

Defaults and storage

Item	Value
Default mode	System
Where it is kept	This browser
Shared across tabs	Yes, open tabs update when you change it
Applied before the page is drawn	Yes
In the settings export file	Yes, as themeMode

How the stored choice is read

When a page loads, the site uses, in order: the mode chosen in Settings (or the drawer, or **Alt + T**); otherwise the last choice made with a light/dark toggle; otherwise your device's setting.

Messages

Message	When
Theme: Light / Theme: Dark / Theme: System	After Alt + T

WEBSITE > SITE FEATURES > THEME

Troubleshooting themes

Fixes for common theme problems.

The site does not follow my device any more

Why: a light/dark toggle (the header button, the right-click menu, Spotlight or the card menu) fixes the theme and leaves System mode.

What to do: choose **System** in Settings > Appearance, or **Auto** in the mobile drawer.

The site is dark but my device is light (or the other way round)

Possible causes:

- You chose **Light** or **Dark** at some point, so System mode is off. Open Settings and check **Theme**.
- Your browser has its own theme setting that overrides the device. In some browsers you can set the website appearance separately from the operating system.

One panel is in a different theme from the page

Why: kits remember their own theme once you use their theme button, and split-view panes can be forced light or dark.

What to do: use the kit's own theme button to match the page. For split view, set the pane's theme back to **Auto**.

My theme changed after I opened a link someone sent me

Why: page links copied from the site can carry the sender's appearance settings, including the theme mode. See [Shareable links](#).

What to do: set your theme again in Settings.

The theme resets every time I close the browser

Why: you are using a private window, or your browser clears site data on exit.

What to do: use a normal window, or allow auricartisan.com to keep site data.

WEBSITE > SITE FEATURES > THEME

Theme FAQ

Short answers about the site's themes.

Is there a high-contrast theme?

There is no separate theme, but **Settings > Comfort > Boost contrast** strengthens text and borders in both themes. See [Accessibility aids](#).

Does the theme change colours in the tools?

No. The theme changes the site's interface. Colours you are working with, swatches and images are shown as they are.

Does my account remember my theme?

The site theme is kept in your browser, not in your account. Your account dashboard has its own theme preference; see [Account and billing](#).

Can I set a different theme for one kit?

Yes. Use the sun or moon button in that kit's title bar. It affects only that kit.

Why does the page not flash when it loads?

The site reads your saved theme before it draws the page, so it starts in the right theme.

Keyboard shortcuts that change the theme.

Keys	Action
Alt + T	Cycle Light, Dark, System
Ctrl + ,	Open Settings, where Theme is in Appearance
Ctrl + K , then >	Spotlight commands, including Toggle light and dark

Alt + **T** does nothing while you are typing in a field. The full list is in [Keyboard shortcuts](#).

WEBSITE > SITE FEATURES > THEME

Theme glossary

Terms used in the theme guides.

Term	Meaning
Theme	The overall colour scheme of the site's interface: light or dark.
Light theme	Light backgrounds with dark text.
Dark theme	Dark backgrounds with light text.
System mode	A setting that follows your device's light or dark preference. Called Auto in the drawer.
Toggle	A control that switches between two states, here light and dark.
Override	A theme set for one panel (a kit or a split-view pane) that differs from the site's theme.

WEBSITE > SITE FEATURES > THEME

Theme privacy

What is stored about your theme choice.

- Your theme mode is kept in this browser's local storage for auricartisan.com, along with the last light or dark choice made with a toggle. The cookie policy lists this under **Functional** storage.
- Each kit's own theme choice is kept the same way.
- Nothing about your theme is sent to Auric Artisan when you change it.
- A page link copied from the site can include your theme mode (see [Shareable links](#)).

WEBSITE > SITE FEATURES > THEME
